DATE: June 6, 2011

TO: EMS Providers - ALS, BLS, EMS Aircraft
Hospital CEOs, ED Directors, Nurse Managers and PLNs
EMS Training Institutions and Continuing Education Providers
San Bernardino County EMCC Members

FROM: Virginia Hastings, ICEMA Executive Director
Reza Vaezazizi, MD, ICEMA Medical Director

SUBJECT: **ICEMA IMPLEMENTATION OF CONTINUATION OF TRAUMA CARE POLICY**

Effective July 5, 2011, ICEMA will implement the **CONTINUATION OF TRAUMA CARE POLICY utilizing the 9-1-1 system** to expedite the transfer of trauma patients from non-trauma hospitals to ICEMA designated trauma centers. This policy was developed following collaboration with our trauma hospitals, receiving hospitals, public and private sector 9-1-1 emergency medical providers, the Medical Advisory Committee and the County's Emergency Medical Care Committee.

Non-trauma hospitals will be using the following scripted language when calling the 9-1-1 system via the primary Public Safety Answering Point (PSAP):

> **"This is a Trauma Continuation of Trauma Run Interfacility Transfer from _____ hospital to _____trauma center"**

The PSAP's will be listening for this specific language which will determine the type of apparatus being dispatched. If requesting critical care or air transports, requests must be made directly to the transporting agency.

If you have any questions, please do not hesitate to contact Chris Yoshida-McMath, RN, at (909) 388-5803 or e-mail at c.yoshida-mcmath@cao.sbcounty.gov.

CONTINUATION OF TRAUMA CARE

THIS POLICY IS FOR TRANSFER OF TRAUMA PATIENTS FROM A REFERRAL HOSPITAL (RH) TO A TRAUMA CENTER (TC) ONLY AND SHALL NOT BE USED FOR ANY OTHER FORM OF INTERFACILITY TRANSFER OF PATIENTS.

PURPOSE

To support a system of trauma care that is consistent with ACS standards and ensures the minimal time from patient injury to receiving the most appropriate definitive trauma care.

DEFINITIONS

Trauma Center (TC) - a licensed general acute care hospital designated by ICEMA's Governing Board as a trauma hospital in accordance with State laws, regulations and ICEMA policies.

Referral Hospital (RH) - any licensed general acute care hospital that is not an ICEMA designated TC.

INCLUSION CRITERIA

Any patient meeting ICEMA Trauma Triage Criteria, (Reference ICEMA Policy #15030) arriving at a non-trauma hospital by EMS or non-EMS transport.

INITIAL TREATMENT GOALS (at RH)

1. Initiate resuscitative measures within the capabilities of the facility.

2. Ensure patient stabilization is adequate for subsequent transfer.

3. Transfer timeline goal is <30 minutes door-to-transfer out.

4. DO NOT DELAY TRANSFER by initiating any diagnostic procedures that do not have direct impact on IMMEDIATE resuscitative measures.

5. RH ED physician will make direct physician-to-physician contact with the ED physician at the TC.

6. The TC will accept all referred trauma patients unless they are on Internal Disaster as defined in ICEMA Policy #8060.

7. The TC ED physician is the accepting physician at the TC and will activate the internal Trauma Team according to internal TC protocols.

8. RH ED physician will determine the appropriate mode of transportation for the patient. If ground transportation is >30 minutes consider the use of an air ambulance. Requests for air ambulance shall be made to 9-1-1 and normal dispatching procedures will be followed; however, the air ambulance continuation of trauma run patient will be transported to the TC identified by the RH.

9. Simultaneously call 9-1-1 and utilize the following script to dispatch:

   "This is a Trauma Continuation of Trauma Run Interfacility Transfer from ____hospital to ____Trauma Center"

   Dispatchers will only dispatch transporting paramedic units without any fire apparatus.

10. RH must send all medical records, test results, radiologic evaluations to the TC. DO NOT DELAY TRANSFER- these documents may be FAXED to the TC.

SPECIAL CONSIDERATIONS

1. If the patient has arrived at the RH via EMS, the RH ED physician may request that transporting team remain with patient and immediately transport them once the minimal stabilization is done at the RH.

2. The RH may consider sending one of its nurses with the transporting paramedic unit if deemed necessary due to the patient's condition or scope of practice.

3. Nurse staffed critical care (ground or air) transport units maybe used; but may create a delay due to availability. Requests of nurse staffed critical care transport units must be made directly to the transporter agency by land line.
