Phone No.: 760-733-4505

PROJECT DESCRIPTION:

The Project consists of the following components:

General Plan/Zoning Map Amendment

Change the land use zoning district from Resource Conservation (RC) to Rural Commercial (CR) for a 7 acre portion of the overall 60.41 acre site.

Conditional Use Permit
Exhibit 2

Construct and operate the following:
7,300 square foot market/restaurant building.
- 3,570 square foot auto service with towing office.
- 6,912 square foot fueling canopy with 8 fueling islands.
- 480 square foot truck canopy/mini-truck stop.
- Impound lot.

**Tentative Parcel Map**

Exhibit 3

Subdivide the 60.41 acre parcel into three (3) parcels as follows:

- Parcel 1: 7 acres to accommodate the development footprint proposed by the Conditional Use Permit described above.
- Parcel 2: 37.39 acres. No development proposed.
- Parcel 3: 37.39 acres. No development proposed.

**Roadway Improvements**

The Project proposes the following roadway improvements adjacent to Parcel 1:

**Dunn Road (Local - 60')**

- **Street Improvements.** Design AC Dike with match up paving 18 feet from centerline with a minimum 26 ft. paved road section within a 40 foot right-of-way.
- **Curb Return Dedication.** A 20 foot radius return grant of easement is required at the intersection of Dunn Road and Afton Canyon Road.
- **Driveway Approach.** Design driveway approach per San Bernardino County Standard 129B, and located per San Bernardino County Standard 130.

**Afton Canyon Road (Local - 60')**

- **Street Improvements.** Design AC Dike with match up paving 18 feet from centerline with a minimum 26 ft. paved road section within a 40 foot right-of-way.
- **Driveway Approach.** Design driveway approach per San Bernardino County Standard 129B, and located per San Bernardino County Standard 130.

**Drainage Improvements**

Construct on-site infiltration basin via curb and gutter on the southwest corner of the Project site.

**Water and Wastewater Improvements**

A new water well and tank are proposed to provide water service.

A new septic system is proposed to provide wastewater treatment.
Construction Duration

Project construction is anticipated to occur over an approximately 9-month period.

ENVIRONMENTAL/EXISTING SITE CONDITIONS:

CEQA Guidelines §15125 establishes requirements for defining the environmental setting to which the environmental effects of a proposed project must be compared. The environmental setting is defined as "...the physical environmental conditions in the vicinity of the project, as they exist at the time the Notice of Preparation is published, or if no Notice of Preparation is published, at the time the environmental analysis is commenced..." (CEQA Guidelines §15125[a]).

The Project does not require the preparation of an Environmental Impact Report and a Notice of Preparation is not required. Thus, the environmental setting for the Project is the approximate date that the Project's Initial Study Checklist commenced in March, 2018.

The proposed Project site is adjacent to the I-15 north Afton Road off-ramp, at the intersection of Afton Road and County Road (Dunn Road). The property supports a native plant community primarily composed of creosote bush, white bursage, desert holly, and flowering annuals. The USGS Dunn, CA Quadrangle does not show any blueline channels on the property. Surrounding land uses and Land Use/Overlay districts are shown in Table 1.

Exhibit 3
EVALUATION FORMAT

This initial study is prepared in compliance with the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21000, et seq. and the State CEQA Guidelines (California Code of Regulations Section 15000, et seq.). Specifically, the preparation of an Initial Study is guided by Section 15063 of the State CEQA Guidelines. This format of the study is presented as follows. The project is evaluated based upon its effect on seventeen (17) major categories of environmental factors. Each factor is reviewed by responding to a series of questions regarding the impact of the project on each element of the overall factor. The Initial Study Checklist provides a formatted analysis that provides a determination of the effect of the project on the factor and its elements. The effect of the project is categorized into one of the following four categories of possible determinations:

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less than Significant Impact With Mitigation Incorporated</th>
<th>Less than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

Substantiation is then provided to justify each determination. One of the four following conclusions is then provided as a summary of the analysis for each of the major environmental factors.

1. **No Impact:** No impacts are identified or anticipated and no mitigation measures are required.

2. **Less than Significant Impact:** No significant adverse impacts are identified or anticipated and no mitigation measures are required.

3. **Less than Significant Impact with Mitigation Incorporated:** Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as a condition of project approval to reduce these impacts to a level below significant. The required mitigation measures are: (List of mitigation measures)

4. **Potentially Significant Impact:** Significant adverse impacts have been identified or anticipated. An Environmental Impact Report (EIR) is required to evaluate these impacts, which are (List of the impacts requiring analysis within the EIR).

At the end of the analysis the required mitigation measures are restated and categorized as being either self-monitoring or as requiring a Mitigation Monitoring and Reporting Program.
ENVIROMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics    ☐ Agriculture and Forestry Resources    ☐ Air Quality
☐ Biological Resources    ☐ Cultural Resources    ☐ Energy
☐ Geology /Soils    ☐ Greenhouse Gas Emissions    ☐ Hazards & Hazardous Materials
☐ Hydrology / Water Quality    ☐ Land Use / Planning    ☐ Mineral Resources
☐ Noise    ☐ Population / Housing    ☐ Public Services
☐ Recreation    ☐ Transportation    ☐ Tribal Cultural Resources
☐ Utilities/Service Systems    ☐ Wildfire    ☐ Mandatory Findings of Significance

Because none of the environmental factors above are "checked", the Project does not require the preparation of an Environmental Impact Report.

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation, the following finding is made:

☐ The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION shall be prepared.

☒ Although the proposed project could have a significant effect on the environment, there shall not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION shall be prepared.

☐ The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

### I. AESTHETICS - Except as provided in Public Resources Code Section 21099, would the project

<table>
<thead>
<tr>
<th>Issues</th>
<th>Potentially Significant Impact</th>
<th>Less than Significant with Mitigation Incorp.</th>
<th>Less than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Have a substantial adverse effect on a scenic vista?</td>
<td>☐</td>
<td>☐</td>
<td>☑</td>
<td>☐</td>
</tr>
<tr>
<td>b) Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☑</td>
</tr>
<tr>
<td>c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?</td>
<td>☐</td>
<td>☐</td>
<td>☑</td>
<td>☐</td>
</tr>
<tr>
<td>d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?</td>
<td>☐</td>
<td>☐</td>
<td>☑</td>
<td>☐</td>
</tr>
</tbody>
</table>

**SUBSTANTIATION** (Check ☐ if project is located within the view-shed of any Scenic Route listed in the General Plan):

### ia) Less Than Significant Impact. County of San Bernardino General Plan Open Space Element, Policy OS 5.1. states that a feature or vista can be considered scenic if it:

- Provides a vista of undisturbed natural areas;
- Includes a unique or unusual feature that comprises an important or dominant portion of the views; or,
- Offers a distant vista that provides relief from less attractive views of nearby features such as views of mountain backdrops from urban areas).

The hills located approximately 1 mile east of the Project site meet the criteria of a scenic vista pursuant to County of San Bernardino General Plan Open Space Element Policy OS 5.1.

The public views of this feature are from the public right-of-way of Dunn Road and Afton Canyon Road adjacent to the Project site. Public views of the hills will not be impacted because the proposed structures (convenience store and gas station canopy) only cover approximately 0.6% of the site and the structure height is restricted to a maximum height of 35 feet by the Development Code.

Based on the analysis above, public views of the hills north and southeast will not be impacted and the Project will have a less than significant impact on a scenic vista.
lb) **No Impact.** According to the California Department of Transportation, I-15 adjacent to the Project site is designated as "Eligible for Scenic Designation" but is not considered a State Scenic Highway absent an official designation as such. However, according to the County of San Bernardino General Plan, Interstate 15 from the junction with Interstate 215 northeast to the Nevada state line, with some exceptions, is considered to be a County Scenic Route. (General Plan p. VI -16). The Project site does not contain any scenic resources, trees, rock outcroppings, or historic buildings. As such, the Project will not have an impact on such resources within a County Scenic Route.

c) **Less than Significant Impact.** According to the Census 2010 Urbanized Area Outline Maps, the Project site is not located within an Urbanized Area. A project is generally considered to have a significant impact on visual character if it substantially changes the character of the project site such that it becomes visually incompatible or visually unexpected when viewed in the context of its surroundings.

The Project site is in an area largely characterized by desert vacant and a commercial facility to the north of I-15. The Project site is proposed for commercial development and will consist of a market/restaurant building; auto service with towing office; fueling canopy with 8 fueling islands; truck canopy/mini-truck stop; and an impound lot. This type of development will not be visually incompatible or visually unexpected for a site adjacent to freeway ramp along I-15 in the desert region. As such, impacts are less than significant.

d) **Less Than Significant Impact.** The Project will not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area because the onsite lighting is required to be fully shielded to prevent light trespass. The standards listed in Chapter 83.07-Glare and Outdoor Lighting of the Development Code ensure that any impact caused by outdoor lighting and glare is reduced to a level below significance.
### II. AGRICULTURE and FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:

<table>
<thead>
<tr>
<th>Issues</th>
<th>Potentially Significant Impact</th>
<th>Less than Significant Impact with Mitigation</th>
<th>Less than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
</tr>
<tr>
<td>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
</tr>
<tr>
<td>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4528), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
</tr>
<tr>
<td>d) Result in the loss of forest land or conversion of forest land to non-forest use?</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
</tr>
<tr>
<td>e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
<td>❌</td>
</tr>
</tbody>
</table>

**SUBSTANTIATION** *(Check ☐ if project is located in the Important Farmlands Overlay):*

1la) **No Impact.** The site does not contain any lands designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as mapped by the State Department of Conservation Farmland Mapping and Monitoring Program. As such, the Project has no potential to convert such lands to a non-agricultural use and no impact would occur.

1lb) **No Impact.** Generally, a conflict with existing zoning for agriculture use would occur if a project would intrude into agricultural areas and create conflicts between agriculture uses and non-agriculture uses. The Project site’s land use designation is RC (Resource Conservation). The Project proposes to change the land use designation to CR (Rural Commercial) which is a land use designation intended
for commercial development and not agricultural use. There are no agricultural uses on the Project site. As such, there is no impact with respect to conflicting with agricultural zoning...

Pursuant to the California Land Conservation Act of 1965, a Williamson Act Contract enables private landowners to voluntarily enter into contracts with local governments for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive lower property tax assessments based upon farming and open space uses as opposed to full market value. The Project site is not under a Williamson Act Contract. As such, there is no impact with respect to a Williamson Act Contract.

Ilc) **No Impact.** The Project site's land use designation RC (Resource Conservation). The Project proposes to change the land use designation to CR (Rural Commercial). The Project site does not contain any forest lands, timberland, or timberland zoned as Timberland Production, nor are any forest lands or timberlands located on or nearby the Project site. Because no lands on the Project site are zoned for forestland or timberland, the Project has no potential to impact such zoning.

Ilid) **No Impact.** The Project site and surrounding properties do not contain forest lands, are not zoned for forest lands, nor are they identified as containing forest resources by the General Plan. Because forest land is not present on the Project site or in the immediate vicinity of the Project site, the proposed Project has no potential to result in the loss of forest land or the conversion of forest land to non-forest use.

Ile) **No Impact.** The Project site is located in an area largely characterized by vacant desert land with sparse development. The site is mostly cleared and supports a highly disturbed desert scrub community with a limited number of plant species on the site. There is no agricultural activity occurring on the Project site or the nearby surrounding properties.

Based on the analysis above, the Project would not result in conversion of Farmland to non-agricultural use or forest land to non-forest use and no impacts would occur.
### III. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

<table>
<thead>
<tr>
<th>a) Conflict with or obstruct implementation of the applicable air quality plan?</th>
<th>☐</th>
<th>☐</th>
<th>☒</th>
<th>☐</th>
</tr>
</thead>
<tbody>
<tr>
<td>b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
<td>☐</td>
</tr>
<tr>
<td>c) Expose sensitive receptors to substantial pollutant concentrations?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?)</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
<td>☐</td>
</tr>
</tbody>
</table>

### SUBSTANTIATION

(Discuss conformity with the Mojave Desert Air Quality Management Plan, if applicable):

The following analysis is based in part on the Air Quality/Greenhouse Gas Study, Birdseye Planning Group, May, 2016 (Appendix A).

The Project Site is located in the Mojave Desert Air Basin. The Mojave Desert Air Quality Management District has jurisdiction over air quality issues and regulations within the Mojave Desert Air Basin. To assist local agencies to determine if a project's emissions could pose a significant threat to air quality, the Mojave Desert Air Quality Management District has prepared the California Environmental Quality Act (CEQA) and Federal Conformity Guidelines, August 2016. The air and dust emissions from the operational use of the Project were evaluated and compared to the Mojave Desert Air Quality Management District standards and evaluated against the most recent thresholds applicable.

#### III.a) Less than Significant Impact.

The Mojave Desert Air Quality Management District ("District") is responsible for preparing and updating an Air Quality Management Plan. The primary purpose of an Air Quality Management Plan is for controlling emissions to maintain all federal and state ambient air standards for the District. The District has adopted a variety of attainment plans for a variety of non-attainment pollutants which together comprise the Air Quality Management Plan for the District.

A project is non-conforming if it conflicts with or delays implementation of any applicable attainment or maintenance plan. A project is conforming if it complies with all applicable District rules and regulations, complies with all proposed control measures that are not yet adopted from the applicable plan(s), and is consistent with the growth forecasts in the applicable plan(s) (or is directly included in the applicable plan). Conformity with growth forecasts can be established by demonstrating that a project is consistent with the land use plan that was used to generate the growth forecast. An example of a non-conforming project would be one that increases the gross number of dwelling units,
increases the number of trips, and/or increases the overall vehicle miles traveled in an affected area (relative to the applicable land use plan).

The current land use designation for the Project site is RC (Resource Conservation). The RC (Resource Conservation) land use zoning district provides sites for open space and recreational activities, single-family homes on very large parcels and similar and compatible uses.

The Project proposes to change the land use designation to CR (Rural Commercial). The purpose of the land use designation change is to accommodate the truck proposed uses which is not allowed under the existing land use designation of RC (Resource Conservation). The Project does not propose any residential units, thus, it will not increases the gross number of dwelling units. The Project is intended to attract vehicle trips that are already traveling on I-15. Therefore, it will not increase the number of trips, and/or increases the overall vehicle miles traveled in the based. In addition, based on Table 3 below, Project-generated emissions generated will not exceed District emission thresholds. Therefore, the Project's emissions are in compliance with the thresholds established by the District.

Based on the analysis above, the Project will not conflict with or obstruct implementation of the Attainment Plans. Therefore, impacts are less than significant.

IIlb) Less than Significant Impact.

Both construction and operational emissions for the Project were estimated by using the California Emissions Estimator Model which is a statewide land use emissions computer model designed to provide a uniform platform for government agencies to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. The model can be used for a variety of situations where an air quality analysis is necessary or desirable such as California Environmental Quality Act (CEQA) documents and is authorized for use by the Mojave Desert Air Quality Management District ("District").

Construction Emissions

Construction activities associated with the Project will result in emissions of CO, VOCs, NOX, SOX, PM10, and PM2.5. Construction related emissions are expected from the following construction activities:

• Site Preparation;
• Grading;
• Building Construction;
• Paving; and
• Architectural Coating.

Project construction is anticipated to occur over an approximately 5-month period. The estimated maximum daily construction emissions without mitigation are summarized on Table 3.

<table>
<thead>
<tr>
<th>Year</th>
<th>ROG (VOC)</th>
<th>NOx</th>
<th>CO</th>
<th>PM10</th>
<th>PM2.5</th>
</tr>
</thead>
<tbody>

<tr>
<td>Significant</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>
Emissions resulting from the Project construction would not exceed thresholds established by the District for emissions of any criteria pollutant. As such, the Project will have a less than significant impact during construction activity and no mitigation is required.

**Operational Emissions**

Operational activities associated with the proposed Project will result in emissions of VOC, NOX, CO, SOX, PM10, and PM2.5. Operational emissions would be expected from the following primary sources:

- **Area Source Emissions** (architectural coatings, consumer products, landscape maintenance equipment);
- **Energy Source Emissions** (combustion emissions associated with natural gas and electricity); and
- **Mobile Source Emissions** (vehicles, fugitive dust related to vehicular travel).

The estimated maximum daily worst case peak operational emissions without mitigation are summarized on Table 4 below.

<table>
<thead>
<tr>

<td>82</td>
</tr>
<tr>
<td><strong>Significant</strong></td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

Emissions resulting from the Project operation would not exceed thresholds established by the District for emissions of any criteria pollutant. As such, the Project will have a less than significant impact during on-going operational activity and no mitigation is required.

**iii.c) No Impact.** The Mojave Desert Air Quality Management District defines sensitive receptors as residences, schools, daycare centers, playgrounds and medical facilities. There are no sensitive receptors in the vicinity of the Project site. As such, the Project will not expose sensitive receptors to substantial pollutant concentrations.

**iii.d) Less Than Significant Impact.** Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming);
- Wastewater treatment plants;
- Food processing plants;
- Chemical plants;
- Composting operations;
- Refineries;
- Landfills;
• Dairies; and
• Fiberglass molding facilities.

The Project does not contain any of the above described land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant.

All retail service stations under MDAQMD jurisdiction have Phase I and II vapor recovery systems to control gasoline emissions and reduce odors. Phase I vapor recovery refers to the collection of gasoline vapors displaced from storage tanks when cargo tank trucks make gasoline deliveries. Phase II vapor recovery systems control the vapors displaced from the vehicle fuel tanks during refueling. In addition, all gasoline is stored underground with valves installed on the tank vent pipes to further control gasoline emissions.

It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the County’s solid waste regulations. The Project would also be required to comply with MDAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required.

**SUBSTANTIATION** (Check □ if project is located in the Biological Resources Overlay or contains habitat for any species listed in the California Natural Diversity Database):

The following analysis is based in part on the General Biological Resources Assessment, Davey Resource Group, July 1, 2016 (Appendix B) and the Rare Plant Survey, Davey Resources Group, April 20, 2018, (Appendix C).
Less Than Significant Impact With Mitigation Incorporated.

**Sensitive Plant Species**

The entire site consisted of one vegetation community, Mojave creosote bush scrub. Common shrubs included creosote bush *Larrea tridentata*, white bursage *Ambrosia dumosa*, and desert holly *Atriplex hymenelytra*. Common annuals included desert dandelion *Malacothrix glabrata*, desert poppy *Eschscholzia glyptosperma*, and desert chicory *Rafinesquia californica*. No plant species listed as "threatened", "endangered", "special species", or "species of concern" by the Federal government or State of California are located on the site.

**Sensitive Wildlife Species**

The property currently experiences relative disturbance due to its proximity to I-15. Noise, light pollution and human presence are all factors that can contribute to the low numbers of wildlife individuals found on the property. Notwithstanding the above, the property is located within an area where Burrowing Owl and Desert Tortoise have the potential to be present.

**Burrowing Owl:** Burrowing Owls utilize a variety of natural and modified habitats for nesting and foraging where the vegetation is low-growing. Typical habitats for the species includes native and non-native grasslands, interstitial grassland within shrub lands, shrubs lands with low density cover, drainage ditches, earthern berms, pasture lands, and fallow fields (CDFW, 1992). Burrowing owls typically utilize abandoned fossorial burrows which have been excavated by various mammals such as coyotes, foxed, ground squirrels, badgers, and dogs. Owls may also use man-made structures such as electrical vaults, cement culverts, man-made structures, and large debris piles. Based on the results of the field surveys, the property does not currently support any population of burrowing owls. However, given that burrowing owls could possibly occupy the site in the future, the following mitigation measure is required:

**Mitigation Measure-BIO-1: Pre-Construction Burrowing Owl Survey.** A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

"Within 30 calendar days prior to grading for any phase, a qualified biologist shall conduct a survey of the Project's proposed impact footprint and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the County of San Bernardino Land Use Services Department-Planning Division prior to the issuance of a grading permit and subject to the following provisions:

a. In the event that the pre-construction survey identifies no burrowing owls in the impact area, a grading permit may be issued without restriction.

b. In the event that the pre-construction survey identifies the presence of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall follow the methods recommended by the California Department of Fish and Wildlife (CDFW, 2012) for passive or active relocation of burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the
biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow California Department of Fish and Wildlife relocation protocol. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow California Department of Fish and Wildlife relocation protocol. The biologist shall provide evidence in writing to the Planning Division that the species has fledged or been relocated prior to the issuance of a grading permit. Project contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by County of San Bernardino staff or its designee to confirm compliance. These notes also shall be specified in bid documents issued to prospective construction contractors.”

Desert Tortoise: No tortoises or any potential tortoise burrows or tortoise sign (scats, etc.) were noted during the field investigations conducted on the site. Although no desert tortoise was observed on the Project site, the following mitigation measure is recommended to ensure that tortoises have not occupied the site since the survey was conducted.

Mitigation Measure-BIO-2: Desert Tortoise. A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to Issuance of a grading permit. Map (Statements in quotations shall be verbatim):

1. All employees, subcontractors, construction personnel, and other individuals who work on-site shall participate in a desert tortoise awareness program. The program shall be administered by the Project Biologist or Environmental Monitor. The program may be given in the field prior to the start of construction activities, and shall include truck drivers, delivery personnel, and other project-related to personnel who have attended the training.

2. An authorized biological monitor shall be present, as needed, during construction to ensure that tortoises or any other special status species enter the construction area and to remove or rescue any individuals that may be injured. Mortality of any tortoise shall be reported to wildlife agency staff.

Project contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by County of San Bernardino staff or its designee to confirm compliance. These notes also shall be specified in bid documents issued to prospective construction contractors.”

With implementation of Mitigation Measures BIO-1 and BIO-2, impacts are less than significant.

IVb) No Impact. There is no surface water on site or any riparian habitat or other sensitive natural community. As such, the Project will not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or US Fish and Wildlife Service or have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

IVc) No Impact. No state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) exist on the site.
IVd) **No Impact.** The Project will not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites as none exist on the site.

IVe) **No Impact.** The County’s Plant Protection and Management Ordinance requires a Tree & Plant Removal Permit for the removal of any Native Desert Plant listed in Chapter 88.01.060(c) of the Development Code or listed in Food and Agriculture Code Section 80001 et seq. None of the species listed in Chapter 88.01.060(c) or in Food and Agriculture Code Section 80001 et seq.) were identified on site.

IVf) **No Impact.** The Project site is located within the planning area of the *West Mojave California Desert Conservation Area Plan* Amendment. The *West Mojave California Desert Conservation Area Plan* Amendment was adopted by the Bureau of Land Management in 2006. The Record-of-Decision applies only to 3.3 million acres of BLM-managed lands. To date no approvals have been issued for the Habitat Conservation Plan component by the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife. All land within the Project site is located on private property outside of the Bureau of Land Management; therefore the *West Mojave California Desert Conservation Area Plan* does not apply. Additionally, the Project site is located within the boundaries of the *Desert Renewable Energy Conservation Plan*. Phase I of the *Desert Renewable Energy Conservation Plan* was approved by the Bureau of Land Management on September 14, 2016 and applies to Bureau of Land Management land only. Phase II which would apply to non-federal land is an on-going process and no implementing agreements have been issued. All land within Project site is located on private property outside of the Bureau of Land Management land; therefore the *Desert Renewable Energy Conservation Plan* does not apply.

</tr>
</tbody>
</table>

**SUBSTANTIATION**

(Check if the project is located in the Cultural Resources overlays or cite results of cultural resource review):

The following analysis is based in part on the Cultural Resources Assessment, ASM Affiliates, December 10, 2015, (Appendix D).

**Va)** No Impact. Historic resources generally consist of buildings, structures, improvements, and remnants associated with a significant historic event or person(s) and/or have a historically significant style, design, or achievement. Damaging or demolition of historic resources is typically considered to be a significant impact. Impacts to historic resources can occur through direct impacts, such as destruction or removal, and indirect impacts, such as a change in the setting of a historic resource.

CEQA Guidelines §15064.5(a) clarifies that historical resources include the following:

1. A resource listed, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources.

2. A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements of section 5024.1(g) of the Public Resources Code.

3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.

Based on the results of the Cultural Resources Assessment prepared for the Project, no cultural resources, including prehistoric or historic archaeological sites or historic buildings pursuant to §15064.5 were discovered.

As such, there will be no impact with respect to historical resources as a result of the Project and no mitigation measures are required.

**Vb)** Less Than Significant Impact With Mitigation Incorporated: Archaeological sites are locations that contain resources associated with former human activities, and may contain such resources as
human skeletal remains, waste from tool manufacture, tool concentrations, and/or discoloration or accumulation of soil or food remains. As noted under Issue Va) above, the Cultural Resources Assessment prepared for the Project site found no surface archaeological resources. Although no surface archaeological resources were discovered, because the site is undeveloped, deeper excavation required during grading activities may result in inadvertent discoveries of archaeological resources. The following mitigation measure is recommended to ensure that any inadvertent discoveries of sub-surface archaeological resources discovered during earth moving activities are not significantly impacted:

Mitigation Measure CR-1: Inadvertent Discoveries. A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

“1. In the event that pre-contact cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting the Secretary of the Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during the assessment period. Additionally, the San Manuel Band of Mission Indians Cultural Resources Department (SMBMI) shall be contacted, as detailed within Mitigation Measure TCR-2, if any such find occurs and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal Input with regards to significance and treatment.

2. If significant pre-contact resources, as defined by CEQA (as amended 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to SMBMI for review and comment, as detailed within Mitigation Measure TCR-2. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

3. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5.”

With implementation of Mitigation Measure CR-1, impacts are less than significant.

Vc) Less Than Significant impact. The Project site does not contain a cemetery and no known formal cemeteries are located within the immediate site vicinity. In the event that human remains are discovered during Project grading or other ground disturbing activities, the Project would be required to comply with the applicable mandatory provisions of California Health and Safety Code §7050.5 as well as Public Resources Code §5097 et. seq. California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin. Pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Coroner determines the remains to be Native American, the California Native American Heritage Commission (NAHC) must be contacted and the NAHC must then immediately notify the “most likely descendant(s)” of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.
VI. ENERGY - Would the project

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

SUBSTANTIATION

Via) Less Than Significant Impact.

Short-Term Construction Impacts

Construction of the Project would create temporary increased demands for electricity and vehicle fuels compared to existing conditions. Construction of the Project would require electricity use to power some of the construction-related equipment. The electricity use during construction would vary during different phases of construction, where the majority of construction equipment during grading would be gas-powered or diesel-powered, and the later construction phases would require electricity-powered, such as interior construction and architectural coatings. Table 5 below shows the estimated energy consumption for Project construction.

<table>
<thead>

**TOTALS**  
21.81 kWh  
824.65 Gal.  
8,381.83 Gal.

1: Calculation is based on an average construction energy cost of $2.29 per month of energy use per 1,000 square feet of building space (10,870.00 s.f.) over the total duration of construction (11-months), at the rate of 8 cents per kilowatt hour (kWh).
2: Calculation is based on expected horsepower (HP) hours and an average factor of 1 gallon of fuel per 18.5 horsepower-hour.
3. Calculation is based on number of expected worker and vendor trips per day, multiplied by an average trip length of 10.80 miles and based on the average fuel economy of a light duty automobile of 26.77 miles per gallon.
4. This calculation overstates the HP hours per construction phase because it does not apply a load factor.

Since the Project site is already served by onsite electrical infrastructure, adequate electrical infrastructure capacity is available to accommodate the electricity demand during construction would not require additional or expanded electrical infrastructure.

The construction contractors are anticipated to minimize idling of construction equipment during construction and reduce construction and demolition waste by recycling. Such required practices would limit wasteful and unnecessary fuel and electrical energy consumption. Thus, impacts from energy use during short-term construction activities would be less than significant.

**Long-Term Operational Impacts**

Operation of the Project would create additional demands for electricity and natural gas as compared to existing conditions, and would result in increased transportation energy use. Operational use of energy would include heating, cooling, and ventilation of buildings; operation of electrical systems, security and control center functions, use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting.

**Electricity**

The Project site is located within the service area of Southern California Edison (SCE). The Project would create a net increase in electricity demand of approximately 184,783 kWh per year. This net increase is well within SCE’s system wide net increase in electricity supplies of approximately 15,273 GWh annually over the 2012-2024 period (CEC, Electricity Consumption by County, 2018). Therefore, there are sufficient planned electricity supplies in the region for the estimated net increase in electricity demands, and buildout under the proposed Project would not require expanded electricity supplies.

**Natural Gas**

The Project site is located within the service area of Southwest Ga. Southern California Gas (SoCal Gas) provides natural gas to Southwest Gas. SoCal Gas receive gas supplies from several sedimentary basins in the western United States and Canada including supply basins located in New Mexico (San Juan Basin), West Texas (Permian Basin), Rocky Mountains, Western Canada, and local California supplies. Gas supply available to So Cal Gas (including SDG&E) from California sources averaged 323 MMcf/day in 2017. The Project would create a net increase in natural gas demand of approximately 133,243 kBtu per year. The Project’s demand is negligible based on the available supply.

According to 2018 California Gas Report prepared in part by California Gas and Electric Utilities, SoCal Gas, projects total gas demand to decline at an annual rate of 0.74 percent from 2018 to 2035. The decline in throughput demand is due to modest economic growth, CPUC-mandated energy efficiency (EE) standards and programs, tighter standards created by revised Title 24 Codes and Standards, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering Infrastructure (AMI).
Conclusion

Plans submitted for building permits of development projects in the Project area would be required to include verification demonstrating compliance with the 2016 Building and Energy Efficiency Standards and are also required to be reviewed. The Project would also be required adhere to the provisions of CALGreen, which established planning and design standards for sustainable site development, energy efficiency.

Based on the above analysis, the proposed Project would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

Vib) No Impact: The County of San Bernardino General Plan Renewable Energy and Conservation Element RE Policy 1.1 states: "Continue implementing the energy conservation and efficiency measures identified in the County of San Bernardino Greenhouse Gas Emissions Reduction Plan. The County's Greenhouse Gas Emissions Reduction Plan is considered a "local plan" for renewable energy or energy efficiency." As noted in the analysis for Issue VIII-b, Greenhouse Gas Emissions, the Performance Standards for Commercial and Industrial Project pursuant to Appendix F of the County of San Bernardino Greenhouse Gas Emissions Reduction Plan will be included as Conditions of Approval for the Project. As such, the Project will not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.
VII. GEOLGY AND SOILS - Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

   i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map Issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42

   □ ☐ ☐ ☐ ❌

   ii. Strong seismic ground shaking?

   □ ☐ ☐ ❌ ☐

   iii. Seismic-related ground failure, including liquefaction?

   □ ☐ ☐ ❌ ☐

   iv. Landslides?

   □ ☐ ☐ ❌ ☐

b) Result in substantial soil erosion or the loss of topsoil?

   □ ☐ ☐ ❌ ☐

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off site landslide, lateral spreading, subsidence, liquefaction or collapse?

   □ ☐ ☐ ❌ ☐

d) Be located on expansive soil, as defined in Table 181B of the California Building Code (2001) creating substantial risks to life or property?

   □ ☐ ☐ ❌ ☐

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

   □ ☐ ☐ ❌ ☐

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

   □ ❌ ☐ ☐ ☐

SUBSTANTIATION

(If project is located in the Geologic Hazards Overlay District):

The following analysis is based in part on the Limited Engineering Geologic Report, RGS Engineering Geology, January 20, 2019 (Appendix E).

Villal) No Impact. The Project site is not located within an Alquist-Priolo Earthquake Fault Zone, and no known faults underlie the site. Because there are no faults located on the Project site, there is no potential for the Project to expose people or structures to adverse effects related to ground rupture.
VIIa(ii) **Less Than Significant Impact.** The Project site is located in a seismically active area of Southern California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. This risk is not considered substantially different than that of other similar properties in the southern California area. As a mandatory condition of Project approval, the Project would be required to construct the proposed structures in accordance with the California Building Code. The County’s Building and Safety Department would review the building plans through building plan checks, issuance of a building permit, and inspection of the buildings during construction, which would ensure that all required California Building Code seismic safety measures are incorporated into the buildings. Compliance with the California Building Code as verified by the County’s review process, would reduce impacts related to strong seismic ground shaking.

VIIa(iii) **Less Than Significant Impact.** The property is underlain by older alluvial deposits consisting of gravel with silt and sand. Groundwater reported occurs at a depth of more than 250 feet below the ground surface. These geologic conditions are not susceptible to liquefaction. In addition, detailed design-level geotechnical studies and building plans pursuant to the California Building Code are required prior to approval of construction. Compliance with the recommendations of the geotechnical study for soils conditions, is a standard practice and would be required by the County Building and Safety Department. Therefore, compliance with the requirements of the California Building Code as identified in a site specific geotechnical design would be reviewed by the County for appropriate inclusion, as part of the building plan check and development review process, would reduce the low potential for liquefaction to a less than significant level.

VIIa(iv) **No Impact.** The site is relatively flat and contains no slopes that may be subject to landslides. Therefore the site is not considered susceptible to seismically induced landslides. As such, there are no impacts.

VIIb) **Less Than Significant Impact.** During construction, the Project has the potential to contribute to soil erosion and the loss of topsoil. Grading and excavation activities that would be required for the Project would expose and loosen topsoil, which could be eroded by wind or water. A Construction General Permit would be obtained and a Storm Water Pollution Prevention Plan (SWPPP) would be prepared prior to construction. Potential impacts would be mitigated for through sediment, erosion, and non-storm water control methods identified in the SWPPP pursuant to the requirements of the NPDES General Construction Permit. Implementation of a SWPPP would ensure the project does not result in significant impacts to water quality due to construction-related activities.

The Project includes paving and installation of landscaping throughout the Project site and areas of loose topsoil that could erode by wind or water would not exist upon operation of the proposed use. In addition, as described in Section X, Hydrology and Water Quality, the hydrologic features of the proposed Project have been designed to slow, filter, and retain stormwater on the Project site, which would also reduce the potential for stormwater to erode topsoil. Potential impacts related to substantial soil erosion or loss of topsoil would be less than significant.

VIIc) **Less Than Significant Impact.**

*Landslide*

As noted in the response to Issue VIIa(iv) above, the site is relatively flat and contains no slopes that may be subject to landslides. Therefore, the site is not considered susceptible to landslides

*Lateral Spreading*
Lateral spreading is a term referring to landslides that commonly form on gentle slopes and that have rapid fluid-like flow horizontal movement. Most lateral spreading is caused by earthquakes but it is also caused by landslides. As noted in the response to Issue VIaiv above, the site is relatively flat and contains no slopes that may be subject to landslides. Therefore, the site is not considered susceptible to lateral spreading.

Subsidence

Subsidence is the downward movement of the ground caused by the underlying soil conditions. Certain soils, such as clay soils are particularly vulnerable since they shrink and swell depending on their moisture content. Subsidence is an issue if buildings or structures sink which causes damage to the building or structure. Considering the coarse nature of relative density of the earth material that underlies the site, the potential for subsidence induced by seismic activity is low. In addition, detailed design-level geotechnical studies and building plans pursuant to the California Building Code are required prior to approval of construction. Compliance with the recommendations of the geotechnical study for soils conditions, is a standard practice and would be required by the County Building and Safety Department. Therefore, compliance with the requirements of the California Building Code as identified in a site specific geotechnical design would be reviewed by the County for appropriate inclusion, as part of the building plan check and development review process, would reduce the potential for subsidence to a less than significant level.

Liquefaction

As noted in the response to Issue VIaiv above, the potential for exposure to liquefaction is not expected because the depth of groundwater is approximately 250 feet.

Collapse

Collapse occurs in saturated soils in which the space between individual particles is completely filled with water. This water exerts a pressure on the soil particles that influences how tightly the particles themselves are pressed together. The soils lose their strength beneath buildings and other structures. Considering the coarse nature of relative density of the earth material that underlies the site, the potential for collapse induced by seismic activity is low. In addition, detailed design-level geotechnical studies and building plans pursuant to the California Building Code are required prior to approval of construction. Compliance with the recommendations of the geotechnical study for soils conditions, is a standard practice and would be required by the County Building and Safety Department. Therefore, compliance with the requirements of the California Building Code as identified in a site specific geotechnical design would be reviewed by the County for appropriate inclusion, as part of the building plan check and development review process, would reduce the low to moderate potential for collapse to a less than significant level.

VIId) Less Than Significant Impact. The property is underlain by older alluvial deposits consisting of gravel with silt and sand. These soils have a very low expansion potential. Detailed design-level geotechnical studies and building plans pursuant to the California Building Code are required prior to approval of construction. Compliance with the recommendations of the geotechnical study for soils conditions, is a standard practice and would be required by the County Building and Safety Department and will ensure that impacts are less than significant.
VIIe) **Less Than Significant Impact.** Soils on the Project site consist of silty sands and poorly graded sands with silt and are considered suitable to accommodate a septic system. The Project will require an Environmental Health Services approved wastewater treatment device since no public sewer is available. The County’s Environmental Health Services Department reviewed the Project and has approved the site for on-site wastewater treatment subject to an approved percolation report.

VIIf) **Less Than Significant Impact With Mitigation Incorporated.** Paleontological resources are the preserved fossilized remains of plants and animals. The Project area is located in the Northern and Eastern Mojave planning area of the California Desert Conservation Area Plan. According to Figure III.10-2 of the Plan, Potential Fossil Yield Classification of Geology - Subarea Index Map of the Draft DRECP and EIR/EIS (August 2014), the Project area is identified as having the potential to contain paleontological resources. To minimize the effects of this potential impact, Mitigation Measure GEO-1 is recommended.

**Mitigation Measure GEO-1: Treatment of Previously Unidentified Paleontological Resources.**

A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

> "If previously unidentified paleontological resources are unearthed during construction activities, construction work in the immediate area of the find shall be halted and directed away from the discovery until a qualified Paleontologist assesses the significance of the resource. The County of San Bernardino Land Use Services Department shall make the necessary plans for treatment of the find(s) and for the evaluation and mitigation of impacts if the finds are found to be historically significant according to CEQA (CEQA Guidelines Section 15064.5 (a)). The plan shall include, but not be limited to:

1. Preparation of recovered specimens to a point of identification and permanent preservation including washing of sediments to recover small invertebrates and vertebrates.

2. Identification and curation of specimens into an established, accredited museum repository with permanent retrievable paleontologic storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. Mitigation of adverse impact to significant paleontological resources is not complete until such curation into an established repository has been fully completed and documented.

3. Preparation of a report of findings with an appended itemized inventory of specimens. The report and Inventory, when submitted to the County Land Use Services Department-Current Planning along with confirmation of the curation of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources."

With implementation of Mitigation Measure GEO-1, impacts are less than significant.
VIII. GREENHOUSE GAS EMISSIONS - Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

☐ ☐ ☒ ☐

b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

☐ ☐ ☒ ☐

SUBSTANTIATION

The following analysis is based in part on the Air Quality/Greenhouse Gas Study, Birdseye Planning Group, May, 2016 (Appendix A).

VIIIa) Less Than Significant Impact. In December September 2011, the County of San Bernardino adopted the "Greenhouse Gas Emissions Reduction Plan" ("GHG Plan"). The purpose of the GHG Plan is to reduce the County’s internal and external GHG emissions by 15 percent below current (2011) levels by year 2020 in consistency with State climate change goals pursuant to AB32. The GHG Plan has been designed in accordance with Section 15183.5 of the State CEQA Guidelines which provides for streamline review of climate change issues related to development projects when found consistent with an applicable greenhouse gas emissions reduction plan.

Section 5.6 of the GHG Plan identifies the procedures for reviewing development projects for consistency with the GHG Plan. The GHG Plan includes a two-tiered development review procedure to determine if a project could result in a significant impact related greenhouse gas emissions or otherwise comply with the Plan pursuant to Section 15183.5 of the State CEQA Guidelines. The initial screening procedure is to determine if a project will emit 3,000 metric tons of carbon dioxide equivalent (MTCO2E) per year or more. Projects that do not exceed this threshold require no further climate change analysis but are required to implement mandatory reducing measures in the project’s conditions of approval.

Projects exceeding this threshold must meet a minimum 31 percent emissions reduction in order to garner a less than significant determination. This can be met by either (1) achieving 100 points from a menu of mitigation options provided in the GHG Plan or (2) quantifying proposed reduction measures. Projects failing to meet the 31 percent reduction threshold would have a potentially significant impact related to climate change and greenhouse gas emissions.

A GHG emissions Inventory was conducted for the Project utilizing the California Emissions Estimator Model (CaEEMod) as shown on Table 5 below.
Table 5. Combined Annual (GHG) Emissions

<td>Exceed Threshold?</td>
<td>NO</td>
</tr>
</tbody>
</table>

Source: Greenhouse Gas Analysis, Urban Crossroads, October 3, 2018 (Appendix D).

As shown on Table 5 above, the Project’s GHG emissions are less than the initial screening threshold of 3,000 MTCO2E per year. Projects that do not exceed this threshold require no further climate change analysis. However, Performance Standards for Commercial and Industrial Project pursuant to Appendix F of the County of San Bernardino Greenhouse Gas Emissions Reduction Plan will be included as Conditions of Approval for the Project.

VIIIb) Less Than Significant Impact. The State and local regulatory programs for GHG emissions and climate change are described in the response to Issue VIIIa above. The Performance Standards described above will ensure that there would be no conflict with any applicable plan, policy, or regulation; therefore, impacts will be less than significant, and no mitigation would be required.
### IX. HAZARDS AND HAZARDOUS MATERIALS - Would the project:

### SUBSTANTIATION

IX a-b) **Less Than Significant Impact.**

**Construction Activities**

Heavy equipment that would be used during construction of the Project would be fueled and maintained by substances such as oil, diesel fuel, gasoline, hydraulic fluid, and other liquid materials that would be considered hazardous if improperly stored or handled. In addition, materials such as paints, roofing materials, solvents, and other substances typically used in building construction would
be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials could result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. The potential for accidental releases and spills of hazardous materials during construction is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with future development that would be a reasonably consequence of the Project than would occur on any other similar construction site.

Construction contractors are required to comply with all applicable federal, state, and local laws and regulations regarding hazardous materials, including but not limited requirements imposed by the Environmental Protection Agency, California Department of Toxic Substances Control, Mojave Desert Air Quality Management District, and the Lahontan Regional Water Quality Control Board. As such, impacts due to construction activities would not cause a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

**Operational Activities**

Because the Project will handle and/or stores substantial quantities of hazardous materials (e.g. motor vehicle fuels), it will be subject to the requirements of the Hazardous Materials Division of the San Bernardino County Fire Department. Typical conditions applied to planning projects include obtaining permits, filing a business emergency/contingency plan, preparing a Risk Management Plan, filing construction plans and obtaining construction permits for the installation of underground storage tanks.

With mandatory regulatory compliance imposed by the Hazardous Materials Division of the San Bernardino County Fire Department, potential hazardous materials impacts associated with long-term operation of the truck service center is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project Increase the potential for accident operations which could result in the release of hazardous materials into the environment.

**IXc) No Impact.** The Project site is not located within one-quarter (0.25) mile of a mile from an existing or proposed school. In addition, as discussed in the responses to issues IXa-b above, the all hazardous or potentially hazardous materials would comply with all applicable federal, State, and local agencies and regulations with respect to hazardous materials.

**IXd) No Impact.** The Project Site is not identified on the list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. The operator would comply with all applicable federal and state safety rules and regulations regarding hazardous materials. Therefore, less than significant impact is anticipated.

**IXe) No Impact.** The Project site is not located within an airport land use plan or within 2 miles of a public airport or public use airport. The nearest airport is Baker Airport located approximately 15 miles to the southwest of the Project site. As such, the Project would not result in safety hazard impacts to or from aircraft-related uses. No impact is anticipated.

**IXf) No Impact.** Activities associated with the Project would not impede existing emergency response plans for the Project Site and/or other land uses in the Project vicinity. All vehicles and stationary equipment would be staged off public roads and would not block emergency access routes. Therefore, implementation of the Project would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. No impact is anticipated.
IX(g)  **No Impact.** The County has mapped areas that are susceptible to wild land fires within the Fire Hazard Overlay. The Project site is not located within a Fire Hazard Overlay.

</tr>
</tbody>
</table>

**SUBSTANTIATION**

The following analysis is based in part on the *Hydrology and Hydraulic Report* Sake Engineering, May, 2018 (Appendix F).

Xa) Less Than Significant Impact.

*Construction Impacts*

Construction of the Project would involve clearing, grading, paving, utility installation, building construction, and the installation of landscaping, which would result in the generation of potential water quality pollutants such as silt, debris, chemicals, paints, and other solvents with the potential
to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during construction activities in the absence of any protective or avoidance measures.

Pursuant to the requirements of the Lahontan Regional Water Quality Control Board and the County of San Bernardino, the Project will be required to obtain a National Pollutant Discharge Elimination System Municipal Stormwater Permit for construction activities. The National Pollutant Discharge Elimination System permit is required for all Projects that include construction activities, such as clearing, grading, and/or excavation that disturb at least one acre of total land area.

In addition, the Project will be required to comply with the Lahontan Regional Water Quality Control Board’s Basin Plan. Compliance with the National Pollutant Discharge Elimination System permit and the Basin Plan involves the preparation and implementation of a Storm Water Pollution Prevention Plan for construction-related activities, including grading. The Storm Water Pollution Prevention Plan would specify the Best Management Practices that the Project would be required to implement during construction activities to ensure that all potential pollutants of concern are prevented, minimized, and/or otherwise appropriately treated prior to being discharged from the Project site.

Operational Impacts

Storm water pollutants commonly associated with the type of land uses that could occupy the proposed buildings include sediment/turbidity, nutrients, trash and debris, oxygen-demanding substances, organic compounds, bacteria and viruses, oil and grease, and pesticides.

Pursuant to the requirements of CalGreen Code Section 5.106.2 Stormwater Pollution Prevention for Projects that Disturb One or More Acres of Land, the Project is subject to NPDES permits that require post-construction runoff (post-project hydrology) to match the preconstruction runoff (pre-project hydrology) with the installation of post-construction stormwater management measures. The NPDES permits emphasize runoff reduction through on-site stormwater use, interception, evapotranspiration, and infiltration through nonstructural controls, such as Low Impact Development (LID) practices, and conservation design measures. Stormwater volume that cannot be addressed using nonstructural practices is required to be captured in structural practices and be approved by the enforcing agency.

In the developed condition, runoff will be conveyed to an on-site infiltration basin and gutter to be located on the southwest corner of the site. The infiltration basin is designed to capture the runoff difference between the post and pre-development conditions. The infiltration basin is large enough to hold the difference and eliminate changes to the runoff hydrograph and sediment supply resulting from land use modifications for downstream properties.

Based on the analysis above, impacts will be less than significant.

Xb) Less Than Significant Impact. A new water well is proposed to provide water service. The Project site is located within the boundaries of the Mojave Water Agency (MWA). According to the MWA 2015 Urban Water Management Plan, The MWA has four existing sources of water supply – State Water Project (SWP) imports, natural local surface water flows, return flow from pumped groundwater not consumptively used, and wastewater imports from outside the MWA service area. Almost all of the water use within MWA is supplied by pumped groundwater. Natural surface supply, return flow, wastewater imports, and SWP imports recharge the groundwater basins.

For management purposes under the Mojave Basin Judgment, MWA split the Mojave River watershed and associated groundwater basins into five separate “Subareas.” The locations of the
five Subareas are; 1) Oeste, 2) Este, 3) Alto, 4) Centro and 5) Baja. The Project site is located within the Baja Subarea.

The Mojave Basin Judgment assigned Base Annual Production (BAP) rights to each producer using 10 acre-feet or more, based on historical production during the period 1986-1990. Parties to the Judgment are assigned a variable Free Production Allowance (FPA), which is a percentage of the BAP set for each Subarea each year by the Watermaster. The BAP is reduced or "ramped-down" over time until FPA comes within 5 percent of the Production Safe Yield (PSY) as defined by the Judgment. The FPA for the Alto Subarea is 80 percent of BAP for agriculture and 60 percent of BAP for municipal and industrial uses. Any Producer that pumps more than their FPA must purchase Replacement Water from the Watermaster equal to the amount of production in excess of their total available FPA, or transfer unused FPA from another party within their Subarea. Funds collected for Replacement Water are then used by the MWA for purchase of SWP supplies and recharged into the Subarea they were produced from.

The long term supply to each Subarea, and the Basin Area as a whole, is assumed to be available in all year types, normal, single dry year and multiple dry year. A premise of the Judgment is that all demands are met. The Judgment requires that any deficit in any year, must be purchased and recharged the following year. During dry periods water will be depleted from groundwater storage (as measured against the long term average) and replaced into storage during wet periods. Annual Deficits in each Subarea are to be resolved by importation of SWP imports. Because water use within the MWA service area is supplied entirely by groundwater, MWA does not have any inconsistent water sources that cause reduced deliveries to users within the service area.

Based on the above analysis, impacts to groundwater supplies and recharge would be less than significant and no mitigation measures are required.

Xcl) **Less Than Significant Impact.** Development of the Project site will create impervious surfaces and increase the amount of surface runoff. In the developed condition, runoff will be conveyed to an on-site infiltration basin and gutter to be located on the southwest corner of the site. The infiltration basin is designed to capture the runoff difference between the post and pre-development conditions. The infiltration basin is large enough to hold the difference and eliminate changes to the runoff hydrograph and sediment supply resulting from land use modifications for downstream properties. Impacts are less than significant.

Xci ) **Less Than Significant Impact.** In the developed condition, the site will drain to curb openings and catch basins and ultimately to an infiltration basin which will provide storm runoff detention that will reduce the peak runoff leaving the property to less than the pre-development condition. As such, the Project will not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite...

Xiv) **Less Than Significant Impact.** The Project site is located within FEMA Zone D (per FEMA National Flood Hazard Map 08071C3425H) and is not subject to flooding. The Project site is also not significantly impacted by offsite storm water runoff. As such, the Project will not Impede or redirect flood flows

Xd) **No Impact.** The Project site is located within FEMA Zone D (per FEMA National Flood Hazard Map 06071C3425H) and is not subject to flooding. According to the California Department of Conservation, California Official Tsunami Inundation Maps the site is not located within a tsunami inundation zone. The Project would not be at risk from seiche because there are no upstream waterbodies large enough to produce a seiche in close proximity to the Project site.
Xe) **Less Than Significant Impact.** With construction of the water quality infiltration basin, the Project will not conflict with or obstruct implementation of the *Lahontan Basin Plan.*

<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>☑</td>
</tr>
</tbody>
</table>

SUBSTANTIATION

XIa) No Impact. The Project site is located in a sparsely developed area adjacent to the northbound off-ramp of Interstate 15 at Afton canyon Road. There is no established community in the immediate vicinity of the Project site. As such, there is no impact.

XIb) No Impact. As demonstrated throughout this Initial Study/Mitigated Negative Declaration, the Project would otherwise not conflict with any applicable goals, objectives, and policies of the County of San Bernardino General Plan or Development Code. Additionally, the Project would not conflict with any applicable policy document, including, without limitation, the California Desert Conservation Area Plan, the Mojave Desert Air Quality Management District's Air Quality Management Plan, and the County of San Bernardino Greenhouse Gas Emissions Reduction Plan. The purpose of these plans is to avoid or mitigate an environmental effect.

In conclusion, the Project would not conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating adverse environmental effects and impacts would be less than significant.

<td>b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?</td>
<td></td>
<td></td>
<td></td>
<td>✗</td>
</tr>
</tbody>
</table>

**SUBSTANTIATION** *(Check ✓ if project is located within the Mineral Resource Zone Overlay):*

**XII(a) No Impact.** The Project site is located within the MRZ-3a overlay identified by the *Mineral Land Classification of a Part of Southwestern San Bernardino County: The Barstow-Victorville-Area, California* report. MRZ-3a Areas of undetermined mineral resource significance. The site has never been used for mining purposes and is therefore of little importance or value for mining purposes.

**XII(b) No Impact.** The Project site is not currently identified as a mineral resources recovery site on the General Plan, a specific plan or other land use plan. A land use designation change from RC (Resource Conservation) to CR (Rural Commercial) is being proposed which if approved, would not allow for mining activities. Therefore, no impact is anticipated.

<th>Less Than Significant Impact.</th>
</tr>
</thead>
</table>

*Construction Noise*

Noise generated by the Project construction equipment will include a combination of trucks, power tools, concrete mixers, and portable generators that when combined can reach high levels. The number and mix of construction equipment is expected to occur in the following stages:

- Site Preparation;
- Grading;
- Building Construction;
- Paving; and
- Architectural Coating.

As shown on Table 6 below, noise levels generated by heavy construction equipment can range from approximately 68 dBA to 99 dBA when measured at 50 feet.
Table 6. Typical Construction Equipment Noise Levels

</tr>
</tbody>
</table>

Even though construction of the Project will generate noise levels as described above, there are no noise sensitive receivers within several miles of the Project site. As such, impacts are less than significant.

Operational Noise (Stationary)

The Project would introduce new commercial land uses on vacant land. On-site operational noise would include noise from HVAC equipment and activities at the fueling stations. In addition, the Project would generate new traffic on the Project site and off-site on Afton Canyon Road and Dunn Cady Road, increasing roadway noise. It is assumed that the commercial facility would operate 24-hours per day, thereby generating daytime and nighttime operational noise.

Even though operation of the Project will generate new sources of noise in the vicinity of the Project site, there are no noise sensitive receivers within several miles of the Project site. As such, impacts are less than significant.

XIIIb) Less Than Significant Impact.

Construction Vibration
Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. The Project's construction activities most likely to cause vibration impacts are heavy construction equipment and trucks hauling building materials to the site. Even though construction of the Project will generate vibration, there are no noise sensitive receivers within several miles of the Project site. As such, impacts are less than significant.

Operational Vibration

Typically, groundborne vibration sources that could potentially affect nearby properties are from rail roads and trucks traveling at higher speeds on freeways and highways. The Project does not have rail access nor is it a major transportation facility or roadway. Therefore, the operational impacts associated with ground-borne vibration would be less than significant.

XIIc) No Impact. The Project site is not located within an airport land use plan or within 2 miles of a public use airport or private airstrip. The nearest public use airport is the Baker Airport located approximately 15 miles to the southwest of the Project site. As such, the Project would not expose people residing or working in the Project area to excessive noise levels. No impact is anticipated.
**XIV. POPULATION AND HOUSING - Would the project:**

- a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?
  - Potentially Significant Impact: ☐
  - Less than Significant with Mitigation: ☐
  - Less than Significant: ☒
  - No Impact: ☐

- b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?
  - Potentially Significant Impact: ☐
  - Less than Significant with Mitigation: ☐
  - Less than Significant: ☐
  - No Impact: ☒

**SUBSTANTIATION**

**XIVa) Less Than Significant Impact.** The Project would not directly result in population growth because it does not propose any residential dwelling units. It is anticipated that any employees generated by the Project would be within commuting distance and would not generate needs for any new housing. As such, impacts are less than significant.

**XIVb) No Impact.** The Project would not displace substantial numbers of existing people or existing housing units, or require the construction of replacement housing, as no housing units exist on the site.
## XV. PUBLIC SERVICES

</tr>
</tbody>
</table>

### SUBSTANTIATION

XVe) **Less Than Significant Impact.**

**Fire Protection**

The San Bernardino County Fire Department provides fire protection services to the Project area. The Project would be primarily served by Baker Station #53 located approximately 26 miles southwest of the Project site at 72734 Baker Road in Baker, CA.

Development of the Project would impact fire protection services by placing an additional demand on existing fire protection resources. The Project would be conditioned by the Fire Department to provide a minimum of fire safety and support fire suppression activities, including compliance with State and local fire codes, fire sprinklers, a fire hydrant system, paved access, and secondary access routes. Although the Project would increase the demand for fire protection services, it is not anticipated that it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities as the Fire Department has reviewed the Project and will provide fire protection services from existing facilities.

Based on the above analysis, impacts related to fire protection are less than significant.
Police Protection

The San Bernardino County Sheriff's Department provides police protection services to the Project site. The Project site would be primarily served by the Barstow Patrol Station located at 225 East Mt. View in Barstow. Deputy Sheriffs assigned to the Barstow Patrol Station patrol the area in which the Project site is located. The Sheriff's Department has indicated that it can provide police protection services to the Project site from existing facilities so the provision of new or physically altered sheriff facilities or need for new or physically altered sheriff facilities is not required.

Schools

The Project does not propose any housing and would not directly create additional students to be served by a school district. However, the Project would be required to contribute fees to the applicable school district in accordance with the Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50). Pursuant to Senate Bill 50, payment of school impact fees constitutes complete mitigation under CEQA for Project-related impacts to school services.

Parks

The Project will not create an additional need for housing thus directly increasing the overall population of the County and generating additional need for parkland.

Other Public Facilities

The Project would not result in a direct increase in the population of the Project area and would not increase the demand for public services, including public health services and library services which would require the construction of new or expanded public facilities.

</table>

**SUBSTANTIATION**

The following analysis is based in part on the Traffic Impact Analysis, KOA Corporation, September 29, 2016. (Appendix G).

XVIIa) Less Than Significant Impact.

**Motor Vehicle Analysis**

**Significance Thresholds**

The San Bernardino County General Plan Circulation Element states that peak hour intersection operations of Level of Service C or better are generally acceptable in the Desert Region. Therefore, any intersection operating at a Level of Service D to F will be considered deficient. In addition, a traffic impact is considered significant if the Project both: i) contributes measurable traffic to and ii) substantially and adversely changes the Level of Service at any off-site location projected to experience deficient operations under foreseeable cumulative conditions, where feasible improvements consistent with the County of San Bernardino General Plan cannot be constructed.

**Study Area Intersections**

The following intersections were analyzed:

1. Interstate 15 Westbound Ramps.
2. Interstate 15 Eastbound Ramps.
3. Project Driveway #1.
4. Project Driveway #2.
Study Scenarios

The following study scenarios were analyzed:

- Existing Condition (2016)
- Project Opening Year 2018 Condition.
- Buildout Year 2040 Condition.

Existing Conditions

All of the intersections are operating at Level of Service D or better during the Friday and Sunday peak hours. Impacts are less than significant.

Project Opening Year 2018 Condition

It has been established that ambient traffic in the study area has historically increased at a rate of about 2% per year compounded. Future increases in the background traffic volumes due to local and regional growth continued at this rate in the vicinity of the Project. All study intersections were forecasted to operate at Level of Service D or better. Impacts are less than significant.

The project will contribute to a cumulative impact during the Friday and/or Sunday peak hour at the following study intersection:

- Interstate 15 Eastbound Ramps at Afton Canyon Road (Sunday Peak Hour).

Buildout Year 2040 Condition

The Buildout Year 2040 Condition evaluates impacts of forecasted regional growth to the Year 2040 with the Project traffic added. Under Project Opening Year 2018 Conditions. The project will contribute to a cumulative impact during the Sunday peak hour at the following study intersections:

- Interstate 15 Westbound Ramps at Afton Canyon Road.
- Interstate 15 Eastbound Ramps at Afton Canyon Road.

For both the Opening Year (2018) and the Build Out Year (2040), the intersection between the Interstate 15 eastbound ramps and Afton Road has a delay greater than 45 seconds during the Sunday Peak Hour, which is the threshold set by the County of San Bernardino. Two options are provided regarding mitigation:

- Installation of a traffic signal
- Implementation of a roundabout

Both of the intersections will operate at acceptable levels of service if either of the proposed improvements are provided per Mitigation Measure TRAN-1 below:

Mitigation Measure- TRAN-1. I-15 Ramp Improvements. Prior to the issuance of a building permit, the proposed Project shall contribute on a fair share basis, through an adopted traffic impact fee program, in the implementation of either of the options recommended for the I-15 Freeway ramp improvements (either a traffic signal or roundabout) as shown in the approved Traffic Impact Analysis prepared for the Project at the following rates:
- Interstate 15 Westbound Ramps at Afton Canyon Road (18.7%).
- Interstate 15 Eastbound Ramps at Afton Canyon Road (35.18%).

The proposed Project’s fair share improvements for the Build Out Year (2040) for the installation of roundabouts was estimated to cost $80,828.05 in September, 2016. The proposed Project’s fair share improvements for the Build Out Year (2040) for the installation of signals at both ramps was estimated to cost $215,538.13 in September, 2016. These costs may be adjusted to reflect the costs at the time a building permit is requested.

With implementation of Mitigation Measure TRAN-1, impacts are less than significant.

Transit Service Analysis

There is no transit service available to the Project site. In addition, the Project is not proposing to construct any improvements that would interfere with any future transit service.

Bicycle & Pedestrian Facilities Analysis

The Project is not proposing to construct any improvements that will interfere with bicycle and pedestrian use. The Project will construct frontage improvements to County standards along Afton Canyon Road and Dunn Road and bicycle and pedestrian access will be facilitated with the construction of these improvements. Motorized travel. Impacts are less than significant.

XVIIb) No Impact. CEQA Guidelines Section 15064.3 (b) describes specific considerations for evaluating a project’s transportation impacts. Generally, vehicle miles traveled (VMT) is the most appropriate measure of transportation impacts. For purposes of this section, “vehicle miles traveled” refers to the amount and distance of automobile travel attributable to a project. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact.

Note: On September 27, 2013, SB 743 was signed into law. SB 743 fundamentally changed the way the transportation impact analysis as part of CEQA compliance is conducted. Automobile delay, as described solely by level of service (LOS) or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment. There will be an opt-in period until July 1, 2020. A lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide. To date, the County of San Bernardino has not adopted a VMT threshold. As such, this threshold is not applicable to the Project.

XVIIc) No Impact. The Project will construct frontage improvements to County standards along Afton Canyon Road and Dunn Road. As such, the Project will not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections. There are no agricultural uses in the vicinity of the site which would increase incompatible uses with farm equipment.

XVIIId) No Impact. The project will not result in inadequate emergency access because there are a minimum of two access points and the Project will construct frontage improvements to County standards along Afton Canyon Road and Dunn Road...
### XVIII. TRIBAL CULTURAL RESOURCES - Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

<table>

<td>☒</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

**SUBSTANTIATION:**
The following analysis is based in part on the *Cultural Resources Assessment, ASM Affiliates, December 10, 2015,* (Appendix D).

XVIIIii) **No Impact.** Historic resources generally consist of buildings, structures, improvements, and remnants associated with a significant historic event or person(s) and/or have a historically significant style, design, or achievement. Damaging or demolition of historic resources is typically considered to be a significant impact. Impacts to historic resources can occur through direct impacts, such as destruction or removal, and indirect impacts, such as a change in the setting of a historic resource.

CEQA Guidelines §15064.5(a) clarifies that historical resources include the following:

1. *A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources.*

2. *A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements [of] section 5024.1(g) of the Public Resources Code.*

3. *Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.*
The South Central Coastal Information Center (SCCIC) at California State University, Fullerton conducted a record search of previously documented cultural resources and cultural resource surveys and studies conducted on the property and within half mile radius of the subject property. No historical resources pursuant to §15064.5 have been previously recorded within the Project area.

The Project area was also examined for the presence of any cultural resources, including prehistoric or historic archaeological sites or historic buildings. No historical resources pursuant to §15064.5 were discovered.

As such, there will be no impact with respect to historical resources as a result of the Project and no mitigation measures are required.

(1) **Less Than Significant Impact With Mitigation Incorporated.** Tribal Cultural Resources are either of the following:

(A) Included or determined to be eligible for inclusion in the California Register of Historical Resources.

(B) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

**Senate Bill (SB) B18**

Because the project involves a General Plan Amendment, the requirements of SB 18 apply. SB18 requires local agencies to consult with tribes prior to making certain planning decisions and to provide notice to tribes at certain key points in the planning process, thereby providing tribes an opportunity to participate in local land use decisions at an early planning stage. SB 18 notification was initiated for this project as required by SB18. As of the date of publishing this document, no tribes have responded.

**Assembly Bill (AB) B52**

AB 52 also created a process for consultation with California Native American Tribes in the CEQA process. Tribal Governments can request consultation with a lead agency and give input into potential impacts to tribal cultural resources before the agency decides what kind of environmental assessment is appropriate for a proposed project.

Through the AB52 notification process, the County Land Use Services Department received comments from the following tribe:
San Manuel Band of Mission Indians.

As a result of the AB52 consultation, the following mitigation measure is recommended:

Mitigation Measure TCR-2: San Manuel Band of Mission Indians

1. The San Manuel Band of Mission Indians Cultural Resources Department (SMBMI) shall be contacted of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with SMBMI, and all subsequent finds shall be subject to the Plan. This plan shall allow for a monitor to be present that represents SMBMI for the remainder of grading activities, should SMBMI elect to place a monitor on-site.

2. Any and all archaeological/cultural documents created as part of the project (insolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and lead Agency for dissemination to SMBMI. The Lead Agency/ or applicant, in good faith, shall consult with SMBMI until concluded per PRC 21082.3.2(b)(1)-(2).

With implementation of Mitigation Measures TCR-1, impacts are less than significant.
XIX. UTILITIES AND SERVICE SYSTEMS - Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water, drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

SUBSTANTIATION

XIXa) Less Than Significant Impact. The Project would require the construction of a new water well, septic system, storm water drainage facilities, electric power, and telecommunications facilities to serve the Project.

The installation of the above described facilities as proposed by the Project would result in physical impacts to the surface and subsurface of the Project site. These impacts are considered to be part of the Project's construction phase and are evaluated throughout this Initial Study. In instances where significant impacts have been identified, Mitigation Measures have been required to reduce impacts to less-than-significant levels. Accordingly, additional measures beyond those identified throughout this Initial Study would not be required.

XIXb) Less Than Significant Impact. The following analysis is based in part on the Final 2015 Water Management Plan for Mojave Water Agency (available at https://www.mojavewater.org/uwm-plan.html).
As noted in the response to Issue Xb under Hydrology and Water Quality, a new water well is proposed to provide water service. The Project site is located within the boundaries of the Mojave Water Agency (MWA). According to the MWA 2015 Urban Water Management Plan, the project site is located within the Baja Subarea of the Mojave Water Agency (MWA).

The Mojave Basin Judgment assigned Base Annual Production (BAP) rights to each producer using 10 acre-feet or more, based on historical production during the period 1986-1990. Parties to the Judgment are assigned a variable Free Production Allowance (FPA), which is a percentage of the BAP set for each Subarea each year by the Watermaster. The BAP is reduced or “ramped-down” over time until FPA comes within 5 percent of the Production Safe Yield (PSY) as defined by the Judgment. The FPA for the Alto Subarea is 80 percent of BAP for agriculture and 60 percent of BAP for municipal and industrial uses. Any Producer that pumps more than their FPA must purchase Replacement Water from the Watermaster equal to the amount of production in excess of their total available FPA, or transfer unused FPA from another party within their Subarea. Funds collected for Replacement Water are then used by the MWA for purchase of SWP supplies and recharged into the Subarea they were produced from.

Water use generated during the operation of the Project is estimated to be 3.13 AFY per year based on the California Emissions Estimator Model (CalEEMod) which is a statewide land use emissions computer model designed to provide a uniform platform for government agencies to quantify potential air quality criteria pollutant emissions associated with both construction and operations from a variety of land use projects. The model can also be used to estimate water use for various types of land uses for analysis in CEQA documents.

MWA has a net natural supply of 57,349 AFY, including surface and subsurface water flows to the five Subareas in the Mojave Basin area and to the Morongo Area. Because the definition of the net natural supply is long-term natural supply estimates, the supplies are going to remain constant regardless of any annual changes in hydrology. Annual fluctuations in natural supplies do not impact the long-term sustainability of the groundwater basins; therefore, the supply is assumed to be 100 percent available in single-dry year and multiple-dry year conditions.

Based on the analysis above, the Project will have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple years and impacts are less than significant.

XIXc) No Impact. A wastewater treatment provider does not serve the Project site. Wastewater is proposed to be treated by a septic system.

XIXd) Less Than Significant Impact. Waste generated during the construction phase of the Project would primarily consist of discarded materials from the construction of streets, common areas, infrastructure installation, and other project-related construction activities.

Construction Waste

Waste generated during the construction phase of the Project would primarily consist of discarded materials from the construction of streets, common areas, infrastructure installation, and other project-related construction activities. The California Green Building Standards Code ("CALGreen"), requires all newly constructed buildings to prepare a Waste Management Plan and divert construction waste through recycling and source reduction methods. The County of San Bernardino, Department of Public Works, Solid Waste Management Division reviews and approves all new construction projects required
to submit a Waste Management Plan. Mandatory compliance with CALGreen solid waste requirements will ensure that construction waste impacts are less than significant.

**Operational Waste**

Waste generated during the operation of the Project is estimated to be 35 tons per year based on the California Emissions Estimator Model (CaIEEMod) which is a statewide land use emissions computer model designed to provide a uniform platform for government agencies to quantify potential air quality criteria pollutant emissions associated with both construction and operations from a variety of land use projects. The model can also be used to estimate solid waste generation rates for various types of land uses for analysis in CEQA documents.

Solid waste generated in the Project area is generally transported to the Barstow Sanitary Landfill. According to the Cal Recycle Facility/Site Summary Details website accessed on June 14, 2019 (https://www2.calrecycle.ca.gov/swfacilities/Directory/36-AB-0045/), the Barstow Sanitary Landfill has a remaining capacity of 71,481,660 cy and is not anticipated to reach capacity until 2071. As such, the Project will not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.

**XIXe) No Impact.** The California Integrated Waste Management Act established an integrated waste management system that focused on source reduction, recycling, composting, and land disposal of waste. In addition, the Act established a 50% waste reduction requirement for cities and counties by the year 2000, along with a process to ensure environmentally safe disposal of waste that could not be diverted. Per the requirements of the Integrated Waste Management Act, the San Bernardino County Board of Supervisors adopted the **County of San Bernardino Countywide Integrated Waste Management Plan** which outlines the goals, policies, and programs the County and its cities will implement to create an integrated and cost effective waste management system that complies with the provisions of California Integrated Waste Management Act and its diversion mandates.

The Project operator(s) will be required to coordinate with the waste hauler to develop collection of recyclable materials for the Project on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the commercial facility include paper products, glass, aluminum, and plastic.

Additionally, the Project’s waste hauler would be required to comply with all applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the landfills that serve the commercial facility are reduced in accordance with existing regulations.
### ISSUES

| XX. WILDFIRE - if located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: |

| a) Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☐ | ☒ |
| c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☐ | ☒ |
| d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☐ | ☒ |

### SUBSTANTIATION

XXa-d) **No Impact.** The County has mapped areas that are susceptible to wild land fires within the Fire Hazard Overlay. The Fire Hazard Overlay is derived from areas designated in high fire hazard areas in the General Plan and locations derived from the California Department of Forestry, U.S. Forest Service, and the County Fire Department. The Project site is not located within a Fire Safety Area. As such, there is no impact.

SUBSTANTIATION

XX(a) Less Than Significant Impact With Mitigation Incorporated. In instances where significant impacts have been identified, Mitigation Measures BIO-1, BIO-2, CR-1 and GEO-1 are required to reduce impacts to less than significant levels. Therefore, Project does not have impacts which would have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory.

XX(b) Less Than Significant Impact With Mitigation Incorporated. In instances where impacts have been identified, Mitigation Measures BIO-1, BIO-2, CR-1, GEO-1, TRAN-1, and TCR-1 are required to reduce impacts to less than significant levels. Therefore, Project does not have impacts that are cumulatively considerable.

XX(c) Less Than Significant Impact. In instances where impacts have been identified, Mitigation Measure TRAN-1 is required to reduce impacts effects on human beings, either directly or indirectly, are less than significant and no mitigation measures are required.
XVIII MITIGATION MEASURES. Include mitigation measures here.

(Any mitigation measures which are not ‘self-monitoring’ shall have a Mitigation Monitoring and Reporting Program prepared and adopted at the time of project approval)

Mitigation Measure-BIO-1: Pre-Construction Burrowing Owl Survey. A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

“Within 30 calendar days prior to grading for any phase, a qualified biologist shall conduct a survey of the Project’s proposed impact footprint and make a determination regarding the presence or absence of the burrowing owl. The determination shall be documented in a report and shall be submitted, reviewed, and accepted by the County of San Bernardino Land Use Services Department-Planning Division prior to the issuance of a grading permit and subject to the following provisions:

a. In the event that the pre-construction survey identifies no burrowing owls in the impact area, a grading permit may be issued without restriction.

b. In the event that the pre-construction survey identifies the presence of burrowing owl, then prior to the issuance of a grading permit and prior to the commencement of ground-disturbing activities on the property, the qualified biologist shall follow the methods recommended by the California Department of Fish and Wildlife (CDFW, 2012) for passive or active relocation of burrowing owls. Passive relocation, including the required use of one-way doors to exclude owls from the site and the collapsing of burrows, will occur if the biologist determines that the proximity and availability of alternate habitat is suitable for successful passive relocation. Passive relocation shall follow California Department of Fish and Wildlife relocation protocol. If proximate alternate habitat is not present as determined by the biologist, active relocation shall follow California Department of Fish and Wildlife relocation protocol. The biologist shall provide evidence in writing to the Planning Division that the species has fledged or been relocated prior to the issuance of a grading permit. Project contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by County of San Bernardino staff or its designee to confirm compliance. These notes also shall be specified in bid documents issued to prospective construction contractors.”

Mitigation Measure-BIO-2: Desert Tortoise. A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

“1. All employees, subcontractors, construction personnel, and other individuals who work on-site shall participate in a desert tortoise awareness program. The program shall be administered by the Project Biologist or Environmental Monitor. The program may be given in the field prior to the start of construction activities, and shall include truck drivers, delivery personnel, and other project-related to personnel who have attended the training.

2. An authorized biological monitor shall be present, as needed, during construction to ensure that tortoises or any other special status species enter the construction area and to remove or rescue any individuals that may be injured. Mortality of any tortoise shall be reported to wildlife agency staff.
Project contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by County of San Bernardino staff or its designee to confirm compliance. These notes also shall be specified in bid documents issued to prospective construction contractors."

Mitigation Measure CR-1: Inadvertent Discoveries. A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

"1. In the event that pre-contact cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting the Secretary of the interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during the assessment period. Additionally, the San Manuel Band of Mission Indians Cultural Resources Department (SMBMI) shall be contacted, as detailed within Mitigation Measure TCR-2, if any such find occurs and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal Input with regards to significance and treatment.

2. If significant pre-contact resources, as defined by CEQA (as amended 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to SMBMI for review and comment, as detailed within Mitigation Measure TCR-2. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

3. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5."

Mitigation Measure GEO-1: Treatment of Previously Unidentified Paleontological Resources.

A Composite Development Plan (CDP) is required and the following shall be delineated or noted on the CDP with confirmation and approval obtained from the Land Use Services Department-Planning Division prior to issuance of a grading permit. Map (Statements in quotations shall be verbatim):

"If previously unidentified paleontological resources are unearthed during construction activities, construction work in the immediate area of the find shall be halted and directed away from the discovery until a qualified Paleontologist assesses the significance of the resource. The County of San Bernardino Land Use Services Department shall make the necessary plans for treatment of the find(s) and for the evaluation and mitigation of impacts if the finds are found to be historically significant according to CEQA (CEQA Guidelines Section 15064.5 (a)). The plan shall include, but not be limited to:

1. Preparation of recovered specimens to a point of identification and permanent preservation including washing of sediments to recover small invertebrates and vertebrates.

2. Identification and curation of specimens into an established, accredited museum repository with permanent retrievable paleontologic storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. Mitigation of adverse impact to significant paleontological resources is not complete until such curation into an established repository has been fully completed and documented."
3. Preparation of a report of findings with an appended itemized inventory of specimens. The report and inventory, when submitted to the County Land Use Services Department—Current Planning along with confirmation of the curation of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

Mitigation Measure- TRAN-1. I-15 Ramp Improvements. Prior to the issuance of a building permit, the proposed Project shall contribute on a fair share basis, through an adopted traffic impact fee program, in the implementation of either of the options recommended for the I-15 Freeway ramp improvements (either a traffic signal or roundabout) as shown in the approved Traffic Impact Analysis prepared for the Project at the following rates:

- Interstate 15 Westbound Ramps at Afton Canyon Road (18.7%).
- Interstate 15 Eastbound Ramps at Afton Canyon Road (35.18%).

The proposed Project’s fair share improvements for the Build Out Year (2040) for the installation of roundabouts was estimated to cost $80,826.05 in September, 2016. The proposed Project’s fair share improvements for the Build Out Year (2040) for the installation of signals at both ramps was estimated to cost $215,536.13 in September, 2016. These costs may be adjusted to reflect the costs at the time a building permit is requested.

Mitigation Measure TCR-2: San Manuel Band of Mission Indians

1. The San Manuel Band of Mission Indians Cultural Resources Department (SMBMI) shall be contacted of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal Input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with SMBMI, and all subsequent finds shall be subject to the Plan. This plan shall allow for a monitor to be present that represents SMBMI for the remainder of grading activities, should SMBMI elect to place a monitor on-site.

2. Any and all archaeological/cultural documents created as part of the project (insolite records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and lead Agency for dissemination to SMBMI. The Lead Agency/ or applicant, in good faith, shall consult with SMBMI until concluded per PRC 21082.3.2(b) (1)-(2),
