			ACTION: 03 - REINSPECTION REQUIRED	

MOSQUITO AND VECTOR CONTROL - Poultry Ranch Permit ALL

No Violations Cited

Overall Inspection Comments

Ranch is about the same from mon. There is still moderate to heavy breeding. Can see he is spot treating there is dead larva and larva that is affected by the pesticide. They are missing wet spots. They need to get all of the wet spot there is breeding to the side where they removed the manure or treated the manure. Ranch needs to figure out how to repair the water cups at the end of the rows. The chickens jump or move and the water spills onto the ground creating a breeding area on the aprons. Drying pad is breeding heavy. The ranch needs to turn and spray the drying pad 2 times a day. The ranch needs to continue with adulticiding 2 times a day. Ranch needs to continue removing the wets manure daily and spot treating all the wet manure. Ranch needs to replace the wet manure with dry manure. Pesticide log shows they are only spraying once a day.
