1. In accordance with Section 86.08.010 of the Development Code, the Planning Commission action may be appealed to the Board of Supervisors.

LAND USE SERVICES DEPARTMENT
PLANNING COMMISSION STAFF REPORT

HEARING DATE: May 4, 2017

Project Description

APN: 0253-171-16

Applicant: Thrifty Oil

Community: Bloomington

Location: Northwest corner of Cedar Avenue and Orange Street.

Project No: P201500091

Staff: Aron Liang

Rep: Moshe Sassover

Proposal: Conditional Use Permit to construct a 371,442-square foot industrial warehouse building with 10,000 square feet of office space for a “high cube” warehouse distribution facility on 19.14 acres.

30 Hearing Notices Sent on: April 21, 2017

Report Prepared By: Aron Liang

SITE INFORMATION:

Parcel Size: 19.14 acres

Terrain: Relatively flat vacant site

Vegetation: Non-native grasses

PROJECT DESCRIPTION:

The applicant requests approval of a Conditional Use Permit to construct a 371,442-square foot industrial high-cube warehouse distribution center with 10,000 square feet of office space (Project). The Project site is approximately 19.14 acres and is located at the northwest corner of Cedar Avenue and Orange Street, in the Community Industrial (IC) zoning district, in the community of Bloomington. The applicant, Thrifty Oil, has presented a summary of the project description in a letter of intent (Exhibit C).

The Project site is vacant and relatively flat, with slopes of less than two percent. The surrounding area is urbanized and zoned for industrial use. The scope of the proposed development will consist of site preparation and construction of the proposed distribution center building, with on-site parking and loading areas, landscaping and water quality management improvements. Off-site street and drainage improvements will also be constructed. The high-cube warehouse facility will have loading docks on the north and south sides of the building. The Project perimeter will be landscaped and concrete walls will screen views from perimeter streets. Access to the site will be provided by commercial driveways on Cedar Place, Orange Street and Linden Avenue.

PROJECT ANALYSIS:

Site Planning: The Project is proposed on a speculative basis, with no operator(s)/tenant(s) pre-identified. The building is designed as a concrete tilt-up cross-dock facility with vertical lift dock-high roll up doors. There would be a total of 84 dock doors: 35 dock doors on the north side and 49 dock doors on the south side. The truck loading and staging areas on the south side of the warehouse would be screened from public view from Orange Street with the combination of a drought-tolerant 25-foot landscape buffer area and 14-foot high solid concrete screen walls. The Project site plan provides adequate area to accommodate all parking, landscaping, loading areas, access requirements and landscaping required to comply with development standards of the County Development Code.

Code Compliance Summary: As noted above, the Project satisfies all applicable standards of the Development Code for development in the IC Land Use District, as illustrated in the following Table 2:

Landscaping: The conceptual landscape plan provides 15% site coverage in drought-tolerant landscaping, with a variety of trees, groundcover and shrubs, in compliance with Development Code Section 83.10.060, Landscape Area Requirements. The Development Code only specifies a minimum number of trees in the parking area (one tree per 10 spaces). The project exceeds that requirement and has ample tree planting in the perimeter landscaping, with a total of 153 trees.
Thrifty Oil  
P201500091/CUP  
APN: 0253-171-16  
Planning Commission Hearing: May 4, 2017

**Hours of Operation:** The operator(s)/tenant(s) of the Project have not been pre-identified, so the precise nature of the facility operation cannot be specified at this time. Technical studies performed for the environmental analysis assume a relatively intensive operation of seven days per week in two eight-hour shifts, with an estimate of 100 employees.

**Interstate 10 and Cedar Avenue Interchange Improvements**

The California Department of Transportation (Caltrans) District 8, in cooperation with the San Bernardino County Transportation Authority (SBCTA) is planning to improve Interstate 10 (I-10) by constructing freeway lanes and improvements through all or a portion of the 33-mile segment from the Los Angeles/San Bernardino County line to Ford Street in Redlands. Cedar Avenue is within this improvement area. Additionally, SBCTA plans to reconstruct the I-10/Cedar Avenue interchange. The interchange improvements include widening the Cedar Avenue bridge at the westbound and eastbound ramp intersections. The I-10/Cedar Avenue interchange is currently in the final design phase and is planned to be open to traffic in 2019. The Project design has been coordinated with the I-10 Corridor improvement project, to be consistent with the design plans for the Cedar Avenue bridge and ramps.

**California Environmental Quality Act (CEQA) Compliance**

An Initial Study (IS) has been completed in compliance with CEQA (Exhibit D). The IS concludes that the Project will not have a significant adverse impact on the environment with the implementation of all recommended Conditions of Approval and mitigation measures contained in the IS, which have also been incorporated in the Conditions of Approval (Exhibit B). On January 30, 2017, a Notice of Availability/Notice of Intent to adopt a Mitigated Negative Declaration (MND) was advertised and distributed to initiate a 20-day public comment period, which concluded on February 21, 2017. One comment letter (Exhibit E) was received from the South Coast Air Quality Management District (SCAQMD), and a response letter was provided to the SCAQMD (Exhibit F). Following are summaries of topics addressed in the IS/MND.

**Aesthetics:** The proposed Project will include landscaping around the entire perimeter of the site. The structure will be a concrete, tilt-up structure, painted in shades of white and gray, with blue glazing on the windows facing Orange Street that are complementary to the existing warehouse facilities to the west. The single-story building will be 45 feet tall, with two office tower design features at the corners of the building to provide vertical articulation. The Project design includes a landscape buffer and screen walls that will hide truck staging and loading activities and dock doors.

**Air Quality:** The Project air quality analysis shows that the project will not violate any air quality standard or contribute substantially to an existing or projected air quality violation, because the proposed use would not exceed established thresholds of concern as established by the SCAQMD. A dust control plan will be required as a standard condition to regulate short-term construction activities that could create windblown dust. Construction painting activities will be restricted as needed to comply with SCAQMD standards.

**Health Risk Assessment:** Due to the Project’s proximity to residences south of Orange Street, a Health Risk Assessment was performed by Scientific Resources Associated to evaluate the impacts of diesel particulate matter (DPM) to sensitive receptor sites. An estimation of health risks (both cancer and non-cancer) from DPM was performed following the guidelines established by the California Resources Board (ARB), the California Office of Environmental Health Hazard Assessment (OEHHA), and the SCAQMD for health risk assessments related to DPM. Mitigation measures combined with Project design will minimize truck idling, resulting in a less than significant health risk associated with the Project.

**Water Quality:** A Preliminary Water Quality Management Plan (WQMP) prepared by David Evans and Associates Inc. has been approved by the Land Development Division of Land Use Services to comply with the requirements of the San Bernardino County National Pollutant Discharge Elimination System.
(NPDES) Area-wide Stormwater Program. The Project drainage system will collect storm water runoff in two on-site detention/infiltration basins designed to percolate into the groundwater basin within the prescribed period of time to avoid the nuisance of standing water. Requirements for approval of the final WQMP have been incorporated in the conditions of approval.

Greenhouse Gases: The County’s Greenhouse Gas Emissions Reduction Plan (GHG Plan) was adopted on December 6, 2011, and became effective on January 6, 2012. The GHG Plan establishes a GHG reduction target for the year 2020 that is 15 percent below 2007 emissions. The GHG Plan is consistent with Assembly Bill (AB) 32 and sets the County on a path to achieve more substantial long-term reductions in the post-2020 period.

GHG Plan Compliance: Implementation of the County’s GHG Plan is achieved through the Development Review Process by applying appropriate reduction requirements to reduce GHG emissions. All new development is required to quantify the Project’s GHG emissions and adopt feasible mitigation to reduce Project emissions below a level of significance. For projects exceeding 3,000 MTCO₂eq per year of GHG emissions, the developer may use the GHG Plan Screening Tables as a tool to identify GHG reduction measures that will maintain consistency with the GHG Plan. Projects that garner 100 or more points through the Screening Table review are consistent with the GHG Plan. The Project has garnered 105 points through the application of energy efficient building standards, including a solar-ready roof, energy efficient lighting and plumbing fixtures and outlets for refrigeration units at each loading dock. The Project also receives points for being located within ¼-mile of public transit. GHG reduction measures selected by the developer from the Screening Tables have been incorporated in the conditions of approval.

Hazardous Materials: A Phase I Environmental Site Assessment was prepared for the Project site by Waterstone Environmental Inc. Stained soil was observed near the southwest corner of the property. Therefore, remediation may be necessary to eliminate this potential hazard. A mitigation measure has been included in the conditions of approval to require a Phase II Soil investigation and subsequent remediation as required, under the supervision of the Hazardous Materials Division of the San Bernardino County Fire Protection District.

Noise: A noise study was prepared by dBF Associates, Inc. to determine the potential impacts of Project-related noise on surrounding properties. The noise study found that project construction would result in a temporary increase in noise levels in the project vicinity. These elevated noise levels would be short-term, ceasing upon completion of Project construction. County noise regulations limit construction activities to the hours between 7:00 a.m. and 7:00 p.m., Monday through Saturday, excluding federal holidays. No significant noise impact is anticipated. However, to avoid potential nuisance noise from construction activities, a mitigation measure has been incorporated in the conditions of approval to enforce best management practices that minimize noise impacts during construction.

Traffic: A Traffic Impact Study was prepared by Hall & Foreman (August 2015 and updated March 2017) to evaluate potential Project-related traffic impacts. The Project is estimated to generate 874 Passenger Care Equivalent (PCE) trips on a daily basis, with 57 PCE trips in the AM peak hour and 62 PCE trips in the PM peak hour. The study used a PCE factor of 3.0. The effect of these trips on the surrounding roadway network was analyzed for both near-term Year 2016 conditions, and long-term Year 2035 conditions. The forecast year 2016 and forecast year 2035 analysis included traffic associated with ambient growth, in addition to a range of cumulative projects anticipated in the study area.

The Traffic Impact Study identifies off-site improvements required to mitigate direct impacts of Project traffic on intersections in the study area. It also assigns fair-share contributions to the cost of additional improvements, proportional to the Project’s partial contribution to projected traffic impacts. The fair-share contribution for the Project is estimated to be $327,365.00. A regional fee program is in place to fund certain improvements to the regional transportation system. The Project’s obligation under this fee program, based on floor area, is estimated to be $676,024.00.
Public Comments:

Project notices were sent to surrounding property owners within 300 feet of the Project site, as required by Development Code Section 85.03.080 for project sites of 20 acres or less. A notice of availability of the Draft IS/MND was sent to surrounding property owners and responsible agencies, as part of the CEQA process. Only one comment letter was received from the South Coast Air Quality Management District related to the air quality analysis (Exhibit E), and a response letter was provided (Exhibit F).

RECOMMENDATION:

That the Planning Commission

1. **ADOPT** the Mitigated Negative Declaration.

2. **APPROVE** the Conditional Use Permit for the construction of a 371,442 sq. ft. high cube warehouse building with 10,000 square feet of office space on 19.14 acres, based on the findings in Exhibit A and subject to the Conditions of Approval in Exhibit B.

3. **DIRECT** staff to file a Notice of Determination.

ATTACHMENTS:

EXHIBIT A: Findings
EXHIBIT B: Conditions of Approval
EXHIBIT C: Letter of Intent
EXHIBIT D: Initial Study/Mitigated Negative Declaration
EXHIBIT E: Comment Letter from SCAQMD
EXHIBIT F: Responses to Comments
Findings
Project Description: A Conditional Use Permit to construct a 371,442-square foot industrial high-cube warehouse distribution center with 10,000 square feet of office/administrative uses, located on the northwest corner of Cedar Avenue and Orange Street, in the Community Industrial (IC) zoning district, in the community of Bloomington. The project will include landscaping improvements and screening walls around the project perimeter, 84 loading docks, 179 parking stalls and 5 commercial/industrial driveways. Access to the site will be provided by with two driveways on Cedar Place, one on Orange Street, and two on Linden Avenue.

PROJECT FINDINGS:

1. The site for the proposed use is adequate in terms of shape and size to accommodate the proposed use and all landscaping, open spaces, setbacks, walls and fences, yards, and other required features pertaining to the application. All setbacks meet the requirements of the Development Code for the proposed land use and the existing zoning. The submitted project plans demonstrate adequate design, parking, landscaping, circulation, access, and setbacks to accommodate the proposed use, consistent with the existing development in the area.

2. The site for the proposed use has adequate access, which means that the site design incorporates appropriate street and highway improvements to serve the proposed use. Access to the project site will be provided by standard commercial/industrial driveways located on Cedar Place, Orange Street, and Linden Avenue, which will provide legal and physical access to the site. Fair share contributions to regional circulation improvements have also been required. On-site circulation drive aisles meet County Fire Department Standards for emergency access and internal circulation.

3. The proposed use will not have a substantial adverse effect on abutting properties or the allowed use of the abutting properties, which means that the use will not generate excessive noise, traffic, vibration, lighting, glare, or other disturbance. The project has been designed to use building materials, colors and design features, including shades of white, and gray, with blue glazing on the windows facing Orange Street that are complementary to the existing warehouse facilities to the west. The Project design also includes a 25-foot landscape buffer and a 14-foot screen wall to buffer truck staging and loading activities, to further enhance the overall aesthetic quality and compatibility of the development.

4. The proposed use and manner of development are consistent with the goals, maps, policies, and standards of the County General Plan and any applicable Community or Specific Plan. The proposed Conditional Use Permit site plan, together with the provisions for its design and improvement are consistent with the County General Plan. The Project specifically implements the following goals and policies:

   General Plan Goal LU 4: The unincorporated communities within the County will be sufficiently served by industrial land uses.

   • Goal Implementation: The proposed Project provides additional industrial development opportunities in the community of Bloomington.

   General Plan Goal LU 9: Development will be in a contiguous manner as much as possible to minimize environmental impacts, minimize public infrastructure and service costs, and further countywide economic development goals.

   General Plan Policy LU 9.1: Encourage infill development in unincorporated areas and sphere of influence (SOI) areas.
Goal ED 1: The County will have a vibrant and thriving local economy that spans a variety of industries, services, and other sectors.

Goal ED 4: The County will assist development of small businesses and encourage new businesses of all sizes.

ED 19.1: Retain and expand trucking, warehousing, and distribution opportunities.

Bloomington Community Plan: The Bloomington Community Plan recognizes the corridor north of Slover Avenue as an industrial corridor, suitable for the proposed use.

5. There is supporting infrastructure, existing or available, consistent with the intensity of the development, to accommodate the proposed Project without significantly lowering service levels. The developer will be required to construct road improvements, as well as contribute to the Regional Transportation Mitigation Facilities Fee Plan to provide other needed improvements in the area.

6. The lawful conditions stated in the approval are deemed reasonable and necessary to protect the overall public health, safety and general welfare because the conditions of approval include measures to reduce air quality and traffic impacts and enforce performance standards of the County Development Code.

7. The design of the Project site has considered the potential for the use of solar energy systems and passive or natural heating and cooling opportunities, through the orientation and design of the building, including a roof that will with adequate building setbacks and the future ability to construct rooftop solar facilities. The use will not substantially interfere with the present or future ability to use solar energy systems.

8. There is no substantial evidence that the Project will have a significant effect on the environment because an Initial Study (IS) has been completed for the proposed Project in compliance with the California Environmental Quality Act. The IS provides an analysis of the Project that supports a conclusion that the Project will not have a significant adverse effect on the environment, subject to implementation of the recommended mitigation measures, which have been incorporated in the Project conditions of approval. Therefore, a Mitigated Negative Declaration (MND) is proposed for adoption, based on the independent evaluation and judgment of the Planning Commission.
Conditions of Approval
CONDITIONS OF APPROVAL
Thrifty Oil P201500091

GENERAL REQUIREMENTS
Ongoing and Operational Conditions

LAND USE SERVICES – Planning Division 909.387.8311

1. Project Description. This Conditional Use Permit approval is for the construction of a 371,442-square foot industrial warehouse building with 10,000 square feet of office area to be used as a “high cube” warehouse distribution facility on 19.14 acres, in the Community Industrial (BL/IC) zoning district, in compliance with the San Bernardino County Code (SBCC), California Building Codes, San Bernardino County Fire Code, California Fire Code, the Conditions of Approval, the approved site plan, and all other required and approved reports and displays (e.g. elevations and landscape plans).

2. Project Location. The Project site is located at the northwest corner of Cedar Avenue and Orange Street, in Bloomington.

3. Conditions of Approval: The developer shall provide a copy of the approved conditions and the site plan to every current and future commercial tenant, lessee, and any future property owner to facilitate compliance with these conditions of approval and continuous use requirements for the Project Site with APN: 0253-171-16 and Project Number: P201500091.

4. Revisions. Any proposed change to the approved use/activity on the site; or any increase in the developed area of the site or any expansion or modification to the approved facilities, including changes to structures, building locations, elevations, signs, parking allocation, landscaping, lighting, allowable number of occupants (clients and/or employees); or a proposed change in the conditions of approval, including operational restrictions from those shown either on the approved site plan and/or in the conditions of approval shall require that an additional land use application (e.g. Revision to an Approved Action) be approved by the County. The developer shall prepare, submit with fees, and obtain approval of the application prior to implementing any such revision or modification. (SBCC §86.06.070)

5. Continuous Effect/Revocation. All Conditions of Approval applied to this project shall be effective continuously throughout the operative life of the project for the approved use. Failure of the property owner, tenant, applicant, developer or any operator to comply with any or all of the conditions at any time may result in a public hearing and revocation of the approved land use, provided adequate notice, time and opportunity is provided to the property owner or other party to correct the non-complying situation.

6. Indemnification. In compliance with SBCC §81.01.070, the developer shall agree to defend, indemnify and hold harmless the County or its “indemnities” (herein collectively the County’s elected officials, appointed officials [including Planning Commissioners], Zoning Administrator, agents, officers, employees, volunteers, advisory agencies or committees, appeal boards or legislative body) from any claim, action or proceeding against the County or its indemnites to attack, set aside, void or annul an approval of the County by an indemnitee concerning the map or permit or any other action relating to or arising out of County approval, including the acts, errors or omissions of any person and for any costs or expenses incurred by the indemmites on account of any claim, except where such indemnification is prohibited by law. In the alternative, the developer may agree to relinquish such approval.

Any Condition of Approval imposed in compliance with the County Development Code or County General Plan shall include a requirement that the County acts reasonably to promptly notify the developer of any claim, action, or proceeding and that the County cooperates fully in the defense. The developer shall reimburse the County and its indemmites for all expenses resulting from such actions, including any court costs and attorney’s fees, which the County or its indemmites may be required by a court to pay as a result of such action.

The County may, at its sole discretion, participate at its own expense in the defense of any such action, but such participation shall not relieve the developer of their obligations under this condition to reimburse the County or its indemmites for all such expenses.

CEQA Mitigation Measures are shown in Italics
This indemnification provision shall apply regardless of the existence or degree of fault of indemnitees. The developer’s indemnification obligation applies to the indemnitee’s “passive” negligence but does not apply to the indemnitee’s “sole” or “active” negligence or “willful misconduct” within the meaning of Civil Code Section 2782.

7. **Expiration.** This project permit approval shall expire and become void if it is not “exercised” within three years of the effective date of this approval, unless an extension of time is granted. The permit is deemed exercised when either
   a. The permittee has commenced actual construction or alteration under a validly issued Building Permit, or
   b. The permittee has substantially commenced the approved land use or activity on the project site, for those portions of the project not requiring a Building Permit. [SBCC §86.06.060]

Occupancy of completed structures and operation of the approved exercised land use remains valid continuously for the life of the project and the approval runs with the land, unless one of the following occurs:

- Building and Safety does not issue construction permits for all or part of the project or the construction permits expire before the completion of the structure and the final inspection approval.
- The County determines the land use to be abandoned or non-conforming.
- The County determines that the land use is not operating in compliance with these conditions of approval, the County Code, or other applicable laws, ordinances or regulations. In these cases, the land use may be subject to a revocation hearing and possible termination.

**PLEASE NOTE:** This will be the ONLY notice given of the expiration date. The developer is responsible for initiation of any Extension of Time application.

8. **Extension of Time.** County staff may grant extensions of time to the expiration date (listed above or as otherwise extended) in increments each not to exceed an additional three years beyond the current expiration date. The developer may file an application to request consideration of an extension of time with appropriate fees no less than 30 days before the expiration date. County staff may grant extensions of time based on a review of the Time application, which must include a justification of the delay in construction and a plan of action for completion. The granting of such an extension request is a discretionary action that may be subject to additional or revised Conditions of Approval or site plan modifications. (SBCC §86.06.060)

9. **Development Impact Fees.** Additional fees may be required prior to issuance of development permits. Fees shall be paid as specified in adopted fee ordinances.

10. **Project Account.** The Job Costing System (JCS) account number is P201500091. This is an actual cost project with a deposit account to which hourly charges are assessed. The developer shall maintain a positive account balance at all times. A minimum balance of $1000 must be in the project account at the time the Condition Compliance Review is initiated. Sufficient funds must remain in the account to cover the charges during each compliance review. All fees required for processing shall be paid in full prior to final inspection, occupancy and operation of the approved use. There shall be sufficient funds remaining in the account to properly fund file closure and any other required post-occupancy review and inspection (e.g. landscape performance).

11. **Condition Compliance.** In order to obtain construction permits for grading, building, final inspection, and/or tenant occupancy for each approved building, the developer shall process a Condition Compliance Release Form (CCRF) for each respective building and/or phase of the development through the Planning Division in accordance with the directions stated in the Approval letter. The Planning Division shall release their holds on each phase of development by providing to County Building and Safety the following:
   a) **Grading Permits:** a copy of the signed CCRF for grading/land disturbance and two “red” stamped and signed approved copies of the grading plans.
   b) **Building Permits:** a copy of the signed CCRF for building permits and three “red” stamped and signed approved copies of the final approved site plan.
   c) **Final Occupancy:** a copy of the signed CCRF for final inspection of each respective building or use of the land, after an on-site compliance inspection by County Planning.

**CEQA Mitigation Measures are shown in Italics**
12. **Additional Permits.** The property owner, developer, and land use operator are all responsible to ascertain and comply with all laws, ordinances, regulations and any other requirements of Federal, State, County and Local agencies as are applicable to the development and operation of the approved land use and project site. These may include:

   a) **FEDERAL:** None
   b) **STATE:** Regional Water Quality Control Board (RWQCB) - Santa Ana Region
   c) **COUNTY:** Land Use Services – Planning, Building and Safety, Land Development, Code Enforcement; Public Health – Environmental Health Services; Special Districts; Public Works – Traffic, Surveyor, Solid Waste; County Fire – Community Safety, Hazardous Materials
   d) **LOCAL:** City of Rialto

13. **Continuous Maintenance.** The Project property owner shall continually maintain the property so that it is visually attractive and not dangerous to the health, safety and general welfare of both on-site users (e.g. employees) and surrounding properties. The property owner shall ensure that all facets of the development are regularly inspected, maintained and that any defects are timely repaired. Among the elements to be maintained, include but are not limited to:

   a) **Annual maintenance and repair.** The developer shall conduct inspections for any structures, fencing/walls, driveways, and signs to assure proper structural, electrical, and mechanical safety.
   b) **Graffiti and debris.** The developer shall remove graffiti and debris immediately through weekly maintenance.
   c) **Landscaping.** The developer shall maintain landscaping in a continual healthy thriving manner at proper height for required screening. Drought-resistant, fire retardant vegetation shall be used where practicable. Where landscaped areas are irrigated it shall be done in a manner designed to conserve water, minimizing aerial spraying.
   d) **Dust control.** The developer shall maintain dust control measures on any undeveloped areas where landscaping has not been provided.
   e) **Erosion control.** The developer shall maintain erosion control measures to reduce water runoff, situtation, and promote slope stability.
   f) **External Storage.** The developer shall maintain external storage, loading, recycling and trash storage areas in a neat and orderly manner, and fully screened from public view. Outside storage shall not exceed the height of the screening walls.
   g) **Metal Storage Containers.** The developer shall NOT place metal storage containers in loading areas or other areas unless specifically approved by this or subsequent land use approvals.
   h) **Screening.** The developer shall maintain screening that is visually attractive. All trash areas, loading areas, mechanical equipment (including roof top) shall be screened from public view.
   i) **Signage.** The developer shall maintain all on-site signs, including posted area signs (e.g. “No Trespassing”) in a clean readable condition at all times. The developer shall remove all graffiti and repair vandalism on a regular basis. Signs on the site shall be of the size and general location as shown on the approved site plan or subsequently a County-approved sign plan.
   j) **Lighting.** The developer shall maintain any lighting so that they operate properly for safety purposes and do not project onto adjoining properties or roadways. Lighting shall adhere to applicable glare and night light rules.
   k) **Parking and on-site circulation.** The developer shall maintain all parking and on-site circulation requirements, including surfaces, all markings and traffic/directional signs in an un-faded condition as identified on the approved site plan. Any modification to parking and access layout requires Planning Division review and approval. Markings and signs shall be clearly defined, un-faded and legible; these include parking spaces, disabled parking and path of travel, directional signs, pedestrian crossing, speed humps and “No Parking”, “Carpool”, and “Fire Lane” designations.
   l) **Fire Lanes.** The developer shall clearly define and maintain in good condition at all times all markings required by the Fire Department, including “No Parking” designations and “Fire Lane” designations.

14. **Performance Standards.** The approved land uses shall operate in compliance with the general performance standards listed in SBCC Chapter 83.01, regarding air quality, electrical disturbance, fire hazards (storage of flammable or other hazardous materials), heat, noise, vibration, and the disposal of liquid waste. In addition to these, none of the following shall be perceptible without instruments at any point outside the project boundaries at adjoining property lines:

   a) **Odors:** No offensive or objectionable odor.
   b) **Emissions:** No emission of dirt, dust, fly ash and other forms of particulate matter.
   c) **Smoke:** No smoke of a greater density than that described in No. 2 on the Ringelmann Smoke Chart, as published currently by the United States Bureau of Mines, shall be emitted from any project source.
   d) **Radiation:** No dangerous amount of radioactive emissions.
   e) **Toxic Gases:** No emission of toxic, noxious or corrosive fumes of gases.
   f) **Glare:** No intense glare that is not effectively screened from view at any point outside the project boundary.

*CEQA Mitigation Measures are shown in Italics*
15. **Lighting.** The glare from any luminous source, including on-site lighting shall not exceed one-half (0.5) foot-candle at property line. All lighting shall be limited to that necessary for maintenance activities and security purposes. This is to allow minimum obstruction of night sky remote area views. No light shall project onto adjacent roadways in a manner that interferes with on-coming traffic. All signs proposed by this project shall only be lit by steady, stationary, shielded light directed at the sign, by light inside the sign, by direct stationary neon lighting or in the case of an approved electronic message center sign alternating no more than once every five seconds.

16. **Clear Sight Triangle.** Adequate visibility for vehicular and pedestrian traffic shall be provided at clear sight triangles at all 90 degree angle intersections of public rights-of-way and private driveways. All signs, structures and landscaping located within any clear sight triangle shall comply with the height and location requirements specified by County Development Code (SBCC§ 83.02.030) or as otherwise required by County Traffic.

17. **Water Conservation.** Structures shall incorporate interior and exterior water conservation measures (low-flow plumbing, water efficient landscaping, drip irrigation, minimization of turf areas, etc.) as required by the SBCC.

18. **Construction Hours.** Construction will be limited to the hours between 7:00 AM and 7:00 PM, Monday through Saturday in accordance with the SBCC standards. No construction activities are permitted outside of these hours or on Sundays and Federal holidays.

19. **Signs.** All proposed on-site signs shall be shown on a separate plan, including location, scaled and dimensioned elevations of all signs with lettering type, size, and copy. Scaled and dimensioned elevations of buildings that propose signage shall also be shown. The applicant shall submit sign plans to County Planning for all existing and proposed signs on this site. The applicant shall submit for approval any additions or modifications to the previously approved signs. All signs shall comply with SBCC Chapter 83.13, Sign Regulations, SBCC §83.07.040, Glare and Outdoor Lighting Mountain and Desert Regions, and SBCC Chapter 82.19, Open Space Overlay as it relates to Scenic Highways (§82.19.040), in addition to the following minimum standards:
   a. All signs shall be lit only by steady, stationary shielded light; exposed neon is acceptable.
   b. All sign lighting shall not exceed 0.5 foot-candle.
   c. No sign or stationary light source shall interfere with a driver's or pedestrian's view of public right-of-way or in any other manner impair public safety.
   d. Monument signs shall not exceed four feet above ground elevation and shall be limited to one sign per street frontage.

20. **Underground Utilities.** No new above-ground power or communication lines shall be extended to the site. All required utilities shall be placed underground in a manner that complies with the California Public Utilities Commission General Order 128, and avoids disturbing any existing/natural vegetation or the site appearance.

21. **Access.** The access point to the facility shall remain unobstructed at all times, except a driveway access gate, which may be closed after normal working hours.

22. **AQ/Operational Mitigation.** The developer shall implement the following air quality measures, during operation of the approved land use: All on-site equipment and vehicles (off-road/on-road), shall comply with the following:
   a) **County Diesel Exhaust Control Measures** [SBCC § 83.01.040 (c)]
   b) Signs shall be posted requiring all vehicle drivers and equipment operators to turn off engines when not in use.
   c) All engines shall not idle more than five minutes in any one-hour period on the project site. This includes all equipment and vehicles.
   d) On-site electrical power connections shall be provided.
   e) All transportation refrigeration units (TRU’s) shall be provided electric connections, when parked on-site.
   f) The loading docks shall be posted with signs providing the telephone numbers of the building facilities manager and the California Air Resources Board to report violations.

CEQA Mitigation Measures are shown in Italics
23. **Anti-Idling Enforcement (GHG Reduction Measure R2T1).** All commercial vehicles are restricted to idle for not more than 5 minutes per trip on site and at loading docks (1 point).

24. **Truck Queues.** All commercial vehicles are restricted from queuing in excess of 5 minutes at both the Orange Street and Linden Avenue ingress/egress points to minimize diesel particulate emissions to sensitive receptor sites.

**LAND USE SERVICES DEPARTMENT – Code Enforcement Division 909.387.8311**

25. **Enforcement.** If any County agency is required to enforce compliance with the conditions of approval, the property owner and “developer” shall be charged for such enforcement activities in accordance with the County Code Schedule of Fees. Failure to comply with these conditions of approval or the approved site plan design required for this project approval shall be enforceable against the property owner and “developer” (by both criminal and civil procedures) as provided by the San Bernardino County Code, Title 8 - Development Code; Division 6 - Administration, Chapter 86.09 - Enforcement.

26. **Weed Abatement.** The Applicant shall comply with San Bernardino County weed abatement regulations [SBCC §23.031-23.043] and periodically clear the site of all non-complying vegetation. This includes removal of all Russian thistle (tumbleweeds).

**LAND USE SERVICES DEPARTMENT – Land Development Division – Drainage Section 909.387.8311**

27. **Tributary Drainage.** Adequate provisions should be made to intercept and conduct the tributary off-site/on-site drainage flows around and through the site in a manner that will not adversely affect adjacent or downstream properties at the time the site is developed.

28. **Natural Drainage.** The natural drainage courses traversing the site shall not be occupied or obstructed.

29. **Additional Drainage Requirements.** In addition to drainage requirements stated herein, other on-site and/or off-site improvements may be required that cannot be determined from tentative plans at this time and would have to be reviewed after more complete improvement plans and profiles have been submitted to this office.

30. **Continuous BMP Maintenance.** The property owner/“developer” is required to provide periodic and continuous maintenance of all Best Management Practices (BMP) devices/facilities listed in the County approved Water Quality Management Plan (WQMP) for the project. This includes but is not limited to, filter material replacement and sediment removal, as required to assure peak performance of all BMPs. Furthermore, such maintenance activity will require compliance with all Local, State, or Federal laws and regulations, including those pertaining to confined space and waste disposal methods in effect at the time such maintenance occurs.

31. **BMP Enforcement.** In the event the property owner/“developer” (including any successors or assigns) fails to accomplish the necessary BMP maintenance within five (5) days of being given written notice by County Public Works, then the County shall cause any required maintenance to be done. The entire cost and expense of the required maintenance shall be charged to the property owner and/or “developer”, including administrative costs, attorney’s fees and interest thereon at the rate authorized by the County Code from the date of the original notice to the date the expense is paid in full.

**PUBLIC HEALTH – Environmental Health Services 800.442.2283**

32. **Noise.** Noise level shall be maintained at or below SBCC Standards, §83.01.080.

33. **Septic System.** The septic system shall be maintained so as not to create a public nuisance and shall be serviced by a DEHS permitted pumper.

34. **Refuse Storage/Removal.** All refuse generated at the premises shall at all times be stored in approved containers and shall be placed in a manner so that visual or other impacts and environmental public health nuisances are minimized. All refuse not containing garbage shall be removed from the premises at least one time per week, or as often as necessary to minimize public health nuisances. Refuse containing garbage shall be removed from the premises at least two times...
per week, or as often as necessary to minimize public health nuisances, by a permitted hauler to an approved solid waste facility in conformance with SBCC Chapter 8, §33.0830 et. seq.

DEPARTMENT OF PUBLIC WORKS – Solid Waste Management 909.386.8701

35. **Recycling Storage Capacity.** The developer shall provide adequate space and storage bins for both refuse and recycling materials. This requirement is to assist the County in compliance with the recycling requirements of AB 2176.

36. **Mandatory Commercial Recycling.** Beginning July 1, 2012, all businesses defined to include a commercial or public entity that generates four or more cubic yards of commercial solid waste a week or is a multi-family residential dwelling of five or more must arrange for recycling services. The County is required to monitor business recycling and will require the business to provide recycling information. This requirement is to assist the County in compliance with the recycling requirements of AB 341.

37. **Mandatory Trash Service** – This project falls within a Uniform Handling Service area. If uniform handling is implemented in all or part of a particular franchise area, all owners or a dwelling or a commercial or industrial unit within the uniform handling area who are required to have uniform handling service shall, upon notice thereof, be required to accept uniform handling service from the grantee holding a franchise agreement and pay the rate of such services. This requirement is a stipulation of County Code Title 4, Division 6, Chapter 5, Section 46.0501.

38. **Mandatory Organics Recycling** – As of April 2016, the State of California through AB 1826 (Enacted October 2014), requires businesses that generate eight (8) cubic yards of organics per week to recycle. A business generating organic waste shall arrange for the recycling services in a manner that is consistent with state and local laws and requirements, including a local ordinance or local jurisdiction’s franchise agreement, applicable to the collection, handling, or recycling of solid and organic waste or arrange for separate organic waste collection and recycling services, until the local ordinance or local jurisdiction’s franchise agreement includes organic waste recycling services. A business that is a property owner may require a lessee or tenant of that property to source separate their organic waste to aid in compliance. **Additionally, all businesses that contract for gardening or landscaping services must stipulate that the contractor recycle the resulting gardening or landscaping waste.** Residential multifamily dwellings of five (5) or more units are required to recycle organics though not required to arrange for recycling services specifically for food waste. Applicant will be required to report to the County on efforts to recycle organics materials once operational.

COUNTY FIRE DEPARTMENT – Community Safety Division (760) 995-8190 / (909) 386-8465/LOCAL FIRE JURISDICTION

39. **Fire Jurisdiction.** The above referenced project is under the jurisdiction of the San Bernardino County Fire Department herein ("Fire Department"). Prior to any construction occurring on any parcel, the applicant shall contact the Fire Department for verification of current fire protection requirements. All new construction shall comply with the current Uniform Fire Code requirements and all applicable statutes, codes, ordinances and standards of the Fire Department.

40. **Fire Fee.** The required fire fees are due at time of submittal; and paid to the San Bernardino County Fire Department/Community Safety Division. This fee is in addition to fire fees that are paid to other City or County offices. [F40] $1,576

41. **Construction Permits.** Construction permits, including Fire Condition Letters, shall automatically expire and become invalid unless the work authorized by such permit is commenced within 180 days after its issuance, or if the work authorized by such permit is suspended or abandoned for a period of 180 days after the time the work is commenced. Suspension or abandonment shall mean that no inspection by the Department has occurred with 180 days of any previous inspection. After a construction permit or Fire Condition Letter, becomes invalid and before such previously approved work recommences, a new permit shall be first obtained and the fee to recommence work shall be one-half the fee for the new permit for such work, provided no changes have been made or will be made in the original construction documents for such work, and provided further that such suspension or abandonment has not exceeded one year. A request to extend the Fire Condition Letter or Permit may be made in writing PRIOR TO the expiration date justifying the reason that the Fire Condition Letter should be extended.

CEQA Mitigation Measures are shown in Italic
42. **Additional Requirements.** In addition to the Fire requirements stated herein, other on-site and off-site improvements may be required which cannot be determined from tentative plans at this time and would have to be reviewed after more complete improvement plans and profiles have been submitted to this office.

**PRIOR TO ISSUANCE OF GRADING PERMITS OR LAND DISTURBING ACTIVITY**

The Following Shall Be Completed

**LAND USE SERVICES DEPARTMENT – Planning Division 909.387.8311**

43. **AQ-Dust Control Plan.** The “developer” shall prepare, submit for review and obtain approval from County Planning of both a Dust Control Plan (DCP) consistent with SCAQMD guidelines and a signed letter agreeing to include in any construction contracts/ subcontracts a requirement that project contractors adhere to the requirements of the DCP. The DCP shall include the following requirements:

a) Exposed soil shall be kept continually moist to reduce fugitive dust during all grading and construction activities, through application of water sprayed a minimum of two times each day.

b) During high wind conditions (i.e., wind speeds exceeding 25 mph), areas with disturbed soil shall be watered hourly and activities on unpaved surfaces shall cease until wind speeds no longer exceed 25 mph.

c) Storage piles that are to be left in place for more than three working days shall be sprayed with a non-toxic soil binder, covered with plastic or revegetated.

d) Storm water control systems shall be installed to prevent off-site mud deposition.

e) All trucks hauling dirt away from the site shall be covered.

f) Construction vehicle tires shall be washed, prior to leaving the project site.

g) Rumble plates shall be installed at construction exits from dirt driveways.

h) Paved access driveways and streets shall be washed and swept daily when there are visible signs of dirt track-out.

i) Street sweeping shall be conducted daily when visible soil accumulations occur along site access roadways to remove dirt dropped or tracked-out by construction vehicles. Site access driveways and adjacent streets shall be washed daily, if there are visible signs of any dirt track-out at the conclusion of any workday and after street sweeping.

[Mitigation Measure III-2] Prior to Grading Permit/Planning

44. **AQ - Construction Mitigation.** The “developer” shall submit for review and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:

a) Provide documentation prior to beginning construction demonstrating that the project will comply with all SCAQMD regulations including 402, 403, 431.1, 431.2, 1113 and 1403.

b) Each contractor shall certify to the developer prior to construction-use that all equipment engines are properly maintained and have been tuned-up within last 6 months.

c) Each contractor shall minimize the use of diesel-powered vehicles and equipment through use of electric, gasoline or CNG-powered equipment. All diesel engines shall have aqueous diesel filters and diesel particulate filters.

d) All gasoline-powered equipment shall have catalytic converters.

e) Provide onsite electrical power to encourage use of electric tools.

f) Minimize concurrent use of equipment through equipment phasing.

g) Provide traffic control during construction to reduce wait times.

h) Provide on-site food service for construction workers to reduce offsite trips.

i) Implement the County approved Dust Control Plan (DCP)

j) Suspend use of all construction equipment operations during second stage smog alerts.

NOTE: For daily forecast, call (800) 367-4710 (San Bernardino and Riverside Counties).

[Mitigation Measure III-3] Prior to Grading Permit/Planning

45. **AQ – Coating Restriction Plan.** The developer shall submit for review and obtain approval from County Planning of a Coating Restriction Plan (CRP), consistent with SCAQMD guidelines and a signed letter agreeing to include in any
construction contracts/subcontracts a condition that the contractors adhere to the requirements of the CRP. The CRP measures shall be following implemented to the satisfaction of County Building and Safety:

a. Architectural coatings with Reactive Organic Compounds (ROC) shall not have content greater than 100 g/l.
b. Architectural coating volume shall not exceed the significance threshold for ROC, which is 75 lbs./day and the combined daily ROC volume of architectural coatings and asphalt paving shall not exceed the significance threshold for ROC of 75 lbs. per day.
c. High-Volume, Low Pressure (HVLP) spray guns shall be used to apply coatings.
d. Pre-coated/natural colored building materials, water-based or low volatile organic compound (VOC) coatings shall be used, if practical.
e. Comply with SCAQMD Rule 1113 on the use or architectural coatings.

[Mitigation Measure III-4] - Prior to Grading Permit/Planning

46. Burrowing Owl Pre-Construction Survey: A pre-construction survey for Burrowing Owl (BUOW) shall be required 30 days before the start of grading activities to confirm the absence of BUOW from the site. If the survey determine the BUOW to be present, protective measures shall be required to ensure compliance with the Migratory Bird Treaty Act (MBTA) and other applicable California Department of Fish and Game (CDFG) Code requirements and include, but are not limited to the following:

a. Occupied BUOW shall not be disturbed during nesting season (February 1-August 31) unless a qualified biologist verifies through non-invasive methods that either (1) the birds have not begun egg laying or incubation or (2) that juveniles from the occupied burrows are foraging independently and are capable of an independent survival flight.
b. All relocation shall be approved by the California Department of Fish and Wildlife (CDFW). The permitted biologist shall monitor relocated owls a minimum of three days per week of a minimum of three weeks. A report summarizing the results of the relocation and monitoring shall be submitted to the CDFW within 30 days following completion of the relocation and monitoring of the BUOW.
c. A BUOW Mitigation Monitoring Plan prepared by a qualified biologist shall be submitted to the CDFW for review and approval prior to relocation of owls. The BUOW Mitigation Monitoring Plan shall describe proposed relocation and monitoring plans. The plan shall include the number and location(s) of occupied BUOU sites and details on adjacent or nearby suitable habitat available to owls for relocation. If no suitable habitat is available nearby for relocation, details regarding the creation of artificial burrows (numbers, locations, and type of burrows) shall be included in the plan. The plan shall also describe specific procedures to compensate for impacts to BUOW/occupied burrows. Such procedures may include, but are not limited to, the purchase/conservation of off-site suitable habitat that is known to support BUOW at a minimum 1:1 ratio depending on the quality of habitat removed compared to the quality of habitat provided. Specific ratios would be determined in consultation with CDFW. Prior to the issuance of occupancy permits, the Applicant shall provide copies of applicable species mitigation agreements/permits to the County of San Bernardino.
d. If BUOW must be moved away from the disturbance area, passive relocation techniques shall be used. One or more weeks would be necessary to accomplish this relocation and allow the owls to acclimate to alternative burrows. Owls must be relocated by a qualified biologist from any occupied burrows that would be impacted by project activities. Suitable habitat is undeveloped land that can meet the BUOW’s life cycle requirements (for both foraging and breeding) and is not intended for development. Suitable habitat must be adjacent or near the disturbance site or artificial burrows would need to be provided nearby. Once the biologist has confirmed that the BUOWs have left the burrow, burrows should be excavated using hand tools and refilled to prevent reoccupation.

[Mitigation Measure IV-1] Prior to Grading Permits/Planning

47. Nesting Bird Survey: Pursuant to the Migratory Bird Treaty Act and the Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat should be conducted outside the avian nesting season. The nesting season generally extends from early February through August but can vary based upon seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a qualified biologist, approved by the County of San Bernardino, shall conduct a pre-construction clearance survey for nesting birds. The survey shall be conducted within three days of the start of any ground disturbing activities to ensure that no nesting birds would be disturbed during construction.
The survey shall focus on all bird species. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active bird nests would occur. If no nests are found, no further mitigation would be necessary. If a nest is found, it shall be avoided/protected with a suitable buffer area until nesting activity has ended (e.g., the young fledge). The diameter of the buffer area shall be determined by the biologist based on the species (some birds are more tolerant than others), the location of the nest relative to existing off-site and on-site disturbances and conditions, and discussions with a regulatory biologist at the California Department of Fish and Wildlife. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur.

[Mitigation Measure IV-2] Prior to Grading Permits/Planning

48. Cultural Resources Monitoring: Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the County of San Bernardino that the Applicant has retained a qualified archaeologist and Native American monitor to observe grading activities and to salvage and catalogue historic and archaeological resources, as necessary. The selection of a qualified Gabriellino Band of Mission Indians Native American monitor shall be made by the archaeologist subject to the approval of the County. The archaeologist and Native American monitor shall be present at the pre-grade conference; the archaeologist shall establish procedures for archaeological resource surveillance; and shall establish, in cooperation with the Applicant/Contractor, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts, as appropriate. Because of the disturbed condition of the project site, the duration of monitoring by both the archaeologist and the Native American monitor shall be determined by the archaeologist. If the archaeologist, with the assistance of the Native American monitor, determines that they are unique historic or archaeological resources as defined by Public Resources Code (PRC) Section 21083.2 or a tribal cultural resource as defined by PRC Section 21074, then the archaeologist and Native American monitor shall conduct additional excavations as determined to be necessary to avoid impacts to these resources by the development. If they are not “unique” then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Section 21083.2 of CEQA. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the County of San Bernardino Land Use Services Department.

[Mitigation Measure V-1] Prior to Grading Permits/Planning

49. Geotechnical Report: Prior to the issuance of grading permits, the Applicant shall prepare and submit for review and approval by the County Geologist, a design-phase geotechnical report which shall consider the recommendations in the Geotechnical Investigation, and revise as necessary for site preparation and construction. The recommendations of the design-phase geotechnical report shall be implemented during site grading and construction.

[Mitigation Measure VI-1] Prior to Grading Permits/Planning

50. Soil Investigation: Prior to the issuance of the first County-issued permit that would allow for site disturbance, a Certified Environmental or Engineering Professional shall conduct an environmental soil investigation at the site as specified in the Phase I Environmental Site Assessment. The Phase II Soil Investigation Report shall be submitted to and approved by San Bernardino County Fire Hazardous Materials Division. Should remediation be required, the clean-up criteria shall be established by the Hazardous Materials Division.

[Mitigation Measure VIII-1] Prior to Grading Permits/Planning

51. Construction Noise: The “developer” shall submit and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce noise impacts during construction, which shall include the following vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:

a) During the project site excavation and grading, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with the manufactures standards.

b) The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site.

c) The construction contractor shall limit all construction-related activities that would result in high noise levels between the hours of 7:00 a.m. and 6:00 p.m., Monday through Saturday excluding holidays.

CEQA Mitigation Measures are shown in Italics
d) The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise sensitive receptors nearest the project site during all project construction.

e) The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment. To the extent feasible, haul routes shall not pass sensitive land uses or residential dwellings.

[Mitigation Measure XII-1] - Prior to Grading Permit/Planning

52. Construction and Demolition Debris Diversion Program (GHG Reduction Measure R2W5). Pursuant to the requirements of Solid Waste Management (Condition No. 114) the contractor shall recycle a minimum of 50% of all project related construction and demolition debris. Prior to issuance of a Grading Permit the developer shall submit a plan of construction recycling showing how a minimum of 50% of all construction related materials will be recycled (6 points).

LAND USE SERVICES DEPARTMENT – Building and Safety Division 909.387.8311

53. Retaining Wall Plans: Submit plans and obtain separate building permits for any required walls or retaining walls.

54. Geology Report: A geology report shall be submitted to the Building and Safety Division for review and approval by the County Geologist and fees paid for the review prior to final project approval.

55. Geotechnical (Soil) Report: When earthwork quantities exceed 5,000 cubic yards, a geotechnical (soil) report shall be submitted to the Building and Safety Division for review and approval prior to issuance of grading permits.

56. Grading Plans: Grading plans shall be submitted to Building and Safety for review and approval prior to grading/land disturbance of more than 50 Cu Yards.

57. Demolition Permit: Obtain a demolition permit for any building/s or structures to be demolished. Underground structures must be broken in, back-filled and inspected before covering.

58. Erosion & Sediment Control Plan: An erosion and sediment control plan and permit shall be submitted to and approved by the Building Official prior to any land disturbance.

59. Erosion Control Installation: Erosion control devices must be installed at all perimeter openings and slopes. No sediment is to leave the job site.

60. NPDES Permit: An NPDES permit - Notice of Intent (NOI) - is required on all grading of one (1) acre or more prior to issuance of a grading/construction permit. Contact your Regional Water Quality Control Board for specifics. www.swrcb.ca.gov

61. Regional Board Permit Letter: CONSTRUCTION projects involving one or more acres must be accompanied by a copy of the Regional Board permit letter with the WDID #. Construction activity includes clearing, grading, or excavation that results in the disturbance of at least one (1) acre of land total.

LAND USE SERVICES DEPARTMENT – Land Development Division – Drainage Section 909.387.8311

62. Drainage Improvements. A Registered Civil Engineer (RCE) shall investigate and design adequate drainage improvements to intercept and conduct the off-site and on-site drainage flows around and through the site in a manner, which will not adversely affect adjacent or downstream properties. Submit drainage study for review and obtain approval. A $550 deposit for drainage study review will be collected upon submittal to the Land Development Division. Deposit amounts are subject to change in accordance with the latest approved fee schedule.

63. Topo Map: The developer shall provide a topographic map to facilitate the design and review of necessary drainage facilities.

CEQA Mitigation Measures are shown in Italics
64. **Grading Plans.** Grading plans shall be submitted for review and approval obtained, prior to construction. All Drainage and WQMP improvements shall be shown on the Grading plans according to the approved Drainage study and WQMP reports. An $806 deposit for grading plan review will be collected upon submittal to the Land Development Division. Deposit amounts are subject to change in accordance with the latest approved fee schedule.

65. **On-site Flows.** On-site flows need to be directed to the drainage facilities unless a drainage acceptance letter is secured from the adjacent property owners and provided to Land Development.

66. **WQMP.** A completed Water Quality Management Plan (WQMP) shall be submitted for review and approval obtained. A $2,650 deposit for WQMP review will be collected upon submittal to the Land Development Division. The report shall adhere to the current requirements established by the Santa Ana Watershed Region. Copies of the WQMP guidance and template can be found at: [http://www.sbcounty.gov/dpw/land/npdes.asp](http://www.sbcounty.gov/dpw/land/npdes.asp).

67. **WQMP Inspection Fee.** The developer shall provide a $3,600 deposit to Land Development Division for inspection of the approved WQMP. Deposit amounts are subject to change in accordance with the latest approved fee schedule.

**COUNTY FIRE DEPARTMENT – Community Safety Division (760) 995-8190 / (909) 386-8465/LOCAL FIRE JURISDICTION**

68. **Primary Access Paved.** Prior to building permits being issued to any new structure, the primary access road shall be paved or an all-weather surface and shall be installed as specified in the General Requirement conditions (Fire # F-9), including width, vertical clearance and turnouts, if required.

**DEPARTMENT OF PUBLIC WORKS – Surveyor 909.387.8149**

69. **Monumentation.** If any activity on this project will disturb any land survey monumentation, including be not limited to vertical control points (benchmarks), said monumentation shall be located and referenced by or under the direction of a licensed land surveyor or registered civil engineer authorized to practice land surveying prior to commencement of any activity with the potential to disturb said monumentation, and a corner record or record of survey of the references shall be filed with the County Surveyor to Section 8771(b) Business and Professions Code).

**PRIOR TO ISSUANCE OF BUILDING PERMITS**

**The Following Shall Be Completed**

**LAND USE SERVICES DEPARTMENT – Planning Division 909.387.8311**

70. **Signs.** This conditional approval includes one freestanding sign. All signs must comply with and be permitted in accordance with SBCC §83.13, Sign Regulations. Provide verification of compliance to the Planning Division prior to issuance of building permits.

71. **Architecture.** Architectural elevations are considered conceptual. Final details with colors and material samples shall be submitted to the Planning Division for approval prior to building plan check submittal.

72. **Lighting Plans.** The developer shall submit for review and approval to County Planning a photometric study demonstrating that the project light does not spill onto the adjacent properties, or public streets. Lighting fixtures shall be oriented and focused to the onsite location intended for illumination (e.g. walkways). Lighting shall be shielded away from adjacent sensitive uses, including the adjacent residential development, to minimize light spillover. The glare from any luminous source, including on-site lighting, shall not exceed 0.5 foot-candle at the property line. This shall be done to the satisfaction of County Planning, in coordination with County Building and Safety.

73. **Trash/Recyclables Receptacles.** All trash and recyclables receptacles shall be in compliance with Public Works, Solid Waste Management standards. They shall be enclosed by six-foot high masonry walls with steel gates. A concrete apron equal to the width of the gate and outward from the enclosure a minimum of six feet shall be provided.

*CEQA Mitigation Measures are shown in Italics*
74. **Underground Utilities.** No new above-ground power or communication lines shall be extended to the site. All required utilities shall be placed underground in a manner that complies with the California Public Utilities Commission General Order 128, and avoids disturbing any existing/natural vegetation or the site appearance.

75. **Landscape and Irrigation Plan.** Landscape and Irrigation Plans shall be prepared in conformance with Chapter 83.10, Landscaping Standards, of the County Development Code, as well as the Blooming Community Plan requirements. The developer shall submit four copies of a landscape and irrigation plan to County Planning.

76. **Energy Efficiency for Commercial Development (GHG Reduction Measure R2E7).** The developer shall document that the design of the proposed structure exceeds the current Title 24 energy efficiency requirements as indicated below:
   - Insulation – Greatly Enhanced Insulation (20% > Title 24) (12 points)
   - Windows – Enhanced Window Insulation (15% > Title 24) (8 Points)
   - Air Infiltration – Modest Building Envelope Leakage (5% > Title 24) (4 points)
   - Heating/Cooling Distribution System – Reduced Distribution Losses (15% > Title 24) (8 points)
   - Space Heating/Cooling Equipment – High Efficiency HBAC (15% > Title 24) (8 points)
   - Water Heaters – High Efficient Water Heater (20% > Title 24) (12 points)
   - Daylighting – all rooms within building have daylight (through use of windows, solar tubes, skylights, etc.) such that each room has at least 800 lumens of light during a sunny day (1 point)
   - Artificial Lighting – High Efficiency Lights (LED etc. 15% > Title 24) (6 points)
   - Appliances – High Efficiency Energy Star Appliances (15% > Title 24) (8 points)
   - Building Placement – North/South alignment of building or other building placement such that the orientation of the buildings optimizes conditions for nature heating, cooling, and lighting (4 points)

77. **Employment Based Trip and VMT Reduction Policy (GHG Reduction Measure R2T2).** The project shall include the following programs:
   - Car/vanpool program with preferred parking (2 Point).
   - Complete sidewalk to residential within ½ mile (1 point).
   - Bike lockers and secure racks (1 point)
   - Local transit within ¼ mile (1 point)

78. **Potable Water - Per Capita Water Use Reduction Goal (GHG Reduction Measure R2WC-1).** The project shall include the following potable water reduction measures that exceeds the current Title 24 energy efficiency requirements as indicated below:
   - Water Efficient Landscaping – Limit conventional turf to <20% of each lot (required) (4 points)
   - Water Efficient Irrigation Systems – Smart irrigation control systems combined with drip irrigation (demonstrate 20 reduced water use (5 points).
   - The project shall include High Efficiency Toilets/Urinals (15% > Title 24) (3 points)
   - The project shall include EPA High Efficiency faucets (15% > Title 24) (3 points)

79. **Renewable Fuel/Low Emissions Vehicles (GHG Reduction Measure R2T5).** The project shall provide circuit and capacity in garages/parking areas for installation of electric vehicle charging stations (2 points).

**LAND USE SERVICES DEPARTMENT – Building and Safety Division 909.387.8311**

80. **Construction Plans:** Any building, sign, or structure to be constructed or located on site, will require professionally prepared plans based on the most current County and California Building Codes, submitted for review and approval by the Building and Safety Division.
81. **Road Dedication/ Improvements.** The developer shall submit for review and obtain approval from the Land Use Services Department the following dedications and plans for the listed required improvements, designed by a Registered Civil Engineer (RCE), licensed in the State of California.

**Linden Avenue (Collector – 66’)**

- **Street Improvements.** Design curb and gutter with match up paving 22 feet from centerline.
- **Sidewalks.** Design sidewalks per County Standard 109 Type “B”.
- **Curb Returns and Sidewalk Ramps.** Curb returns shall be designed per County Standard 110. Adequate easement shall be provided to ensure sidewalk improvements are within Public right-of-way.
- **Driveway Approach.** Design driveway approach per San Bernardino County Standard 129B, and located per San Bernardino County Standard 130.
- **Cul-de-sac Design.** The proposed cul-de-sac shall be designed to County Standard 120.

**Orange Street (Local – 60’)**

- **Driveway Approach.** Design driveway approach per San Bernardino County Standard 129B, and located per San Bernardino County Standard 130.

**Cedar Place (Private - 50’)**

- **Street Improvements.** Design curb and gutter with match up paving 36 feet full width.
- **Sidewalks.** Design sidewalks per County Standard 109 Type “C”.
- **Driveway Approach.** Design driveway approach per San Bernardino County Standard 129B, and located per San Bernardino County Standard 130.
- **Cul-de-sac Design.** The proposed cul-de-sac shall be designed to County Standard 120.

82. **Road Standards and Design.** All required street improvements shall comply with latest San Bernardino County Road Planning and Design Standards and the San Bernardino County Standard Plans. Road sections shall be designed to Valley Road Standards of San Bernardino County, and to the policies and requirements of the County Department of Public Works and in accordance with the General Plan, Circulation Element.

83. **Street Improvement Plans.** The developer shall submit for review and obtain approval of street improvement plans prior to construction. Final plans and profiles shall indicate the location of any existing utility facility or utility pole which would affect construction, and any such utility shall be relocated as necessary without cost to the County. Street improvement plans shall not be approved until all necessary right-of-way is acquired.

84. **CMRS Exclusion.** Cedar Place shall not be entered into the County Maintained Road System (CMRS).

85. **Construction Permits.** Prior to installation of road and drainage improvements, a construction permit is required from County Public Works, Transportation Operations Division, Permit Section, (909) 387-8046, as well as other agencies prior to work within their jurisdiction. Submittal shall include a materials report and pavement section design in support of the section shown on the plans. Applicant shall conduct classification counts and compute a Traffic Index (TI) Value in support of the pavement section design.

*CEQA Mitigation Measures are shown in Italics*
86. **Soils Testing.** Any grading within the road right-of-way prior to the signing of the improvement plans shall be accomplished under the direction of a soils testing engineer. Compaction tests of embankment construction, trench back fill, and all sub-grades shall be performed at no cost to San Bernardino County and a written report shall be submitted to the Transportation Operations Division, Permits Section of County Public Works, prior to any placement of base materials and/or paving.

87. **Turnarounds.** Turnarounds at dead end streets shall be in accordance with the requirements of the County Department of Public Works and Fire Department.

88. **Transitional Improvements.** Right-of-way and improvements (including off-site) to transition traffic and drainage flows from proposed to existing, shall be required as necessary.

89. **Street Gradients.** Road profile grades shall not be less than 0.5 percent unless the engineer, at the time of submittal of the improvement plans, provides justification to the satisfaction of the Department of Public Works confirming the adequacy of the grade.

90. **Two Access Points.** A minimum two points of ingress/egress are required or alternative approved by County Fire Department.

91. **Regional Transportation Fee.** This project falls within the Regional Transportation Development Mitigation Fee Plan Area for the Rialto Subarea. The Regional Transportation Development Mitigation Plan Fee (Plan Fee) shall be paid by a cashier’s check to the Land Use Services Department. The Plan Fee shall be computed in accordance with the Plan Fee Schedule in effect as of the date that the building plans are submitted and the building permit is applied for. The Plan Fee is subject to change periodically. Currently, the fee is $1.82 per square foot for High Cube Use, which includes the 371,442 sq. ft. building per the site plan dated 03/24/2017. Therefore, the estimated Regional Transportation Fees for the Project is $676,024.44. The current Regional Transportation Development Mitigation Plan can be found at the following website: [http://cms.sbcounty.gov/dpw/Transportation/TransportationPlanning.aspx](http://cms.sbcounty.gov/dpw/Transportation/TransportationPlanning.aspx)

**DEPARTMENT OF PUBLIC WORKS – Traffic Division 909.387.8186**

92. The applicant shall design their street improvement plans to include the following based on the March 7, 2016 Traffic Report from David Evans and Associates, Inc. and the letter report from David Evans and Associates, Inc. dated March 23, 2017 and April 6, 2017:

- Cedar Place to be restricted to right in/right out only movement at Cedar Avenue.
- Intersection of Cedar Avenue at Orange Street to include:
  - Add a dedicated westbound left turn pocket.
  - Extend the existing eastbound left turn pocket to have a storage length of 400’
  - No parking shall be placed along the south side of Orange Street at the following locations:
    - Linden Avenue easterly for a distance of 100 feet,
    - 500 feet west of Cedar Avenue to Cedar Avenue.
- Intersection of Cedar Avenue at Valley Blvd. may include the following pending final design plans for SANBAG’s interchange project:
  - Change the west leg of the intersection’s geometry to two left turn lanes; one through lane; a shared through/right turn lane and a right turn lane.

93. The total fair share contribution for this project is required based on the traffic report dated March 7, 2016 from David Evans and Associates, Inc. The fair share breakdown for these improvements is shown below. If improvements shown below are included in the final design plans for SANBAG’s interchange project, then the contribution requirement may be adjusted accordingly.

*CEQA Mitigation Measures are shown in Italics*
The total fair share contribution will be based on the fair share percentages listed above and the estimated construction costs at the time of application for a building permit and shall be paid to the Department of Public Works - Traffic Division. At the present time, the estimated cost is $327,365. This amount will be adjusted to reflect actual construction costs incurred, if available, or will be adjusted to account for future construction costs using the Caltrans Construction Cost Index.

PUBLIC HEALTH – Environmental Health Services 800.442.2283

94. **Water.** Water purveyor shall be West Valley Water District or EHS approved.

95. **Water Letter.** The Applicant shall procure a verification letter from the water agency with jurisdiction. This letter shall state whether or not water connection and service shall be made available to the project by the water agency. The letter shall reference Assessor's Parcel Number (APN): 3066-311-02. For projects with current active water connections, a copy of water bill with the project address may suffice. For information, contact the Water Section at 800.442.2283.

96. If an approved Water company cannot serve the project, individual wells are authorized for each daughter parcel providing that the County Development Code infrastructure requirements can be met. Conceptual plans, showing that wells and septic system locations meet setback requirements, may be required (Section 83.09.060). If wells are approved, the following notes shall be placed on the Composite Development Plan (CDP), "An individual well shall be utilized as the..."
domestic water source for each lot. The well shall be installed, pump tested, and the pump to set results reviewed and approved by EHS prior to the issuance of building permits for each lot.”

97. **Sewer.** Method of sewage disposal shall be City of Rialto or EHS approved.

98. **Sewer Letter.** The Applicant shall procure a verification letter from the sewer agency with jurisdiction. This letter shall state whether or not sewer connection and service shall be made available to the project by the water agency. The letter shall reference APN: 0292-051-14.

99. If sewer connection and/or service are unavailable, onsite wastewater treatment systems(s) may then be allowed under the following conditions: A soil percolation report shall be submitted to DEHS for review and approval. A plot plan showing the location of the septic system may be required by DEHS prior to the issuance of building permits. If the percolation report cannot be approved, the project may require alternative OWTS. For information, please contact the Wastewater Section at 1.800.442.2283.

100. Existing septic system can be used if applicant provides certification from a qualified professional (i.e., Professional Engineer (P.E.), Registered Environmental Health Specialist (REHS), C42 contractor, Certified Engineering Geologist (C.E.G.), etc.) that the system functions properly, meets code, and has the capacity required for the proposed project. Applicant shall provide documentation outlining methods used in determining function.

101. **Verification of Service.** Submit verification of service approval to DEHS for any project that requires water or sewer connection outside a purveyor’s jurisdiction. For information, contact LAFCO at: 909-383-9900.

102. Written clearance shall be obtained from the designated California Regional Water Quality Control Board (Listed below) and a copy forwarded to the Division of Environmental Health Services

A. Santa Ana Region, 3737 Main Street, Suite 500, Riverside, CA 92501-3339, 951-782-4130

103. **Acoustical Information.** Submit preliminary acoustical information demonstrating that the proposed project maintains noise levels at or below San Bernardino County Noise Standards, SBCC §83.01.080. The purpose is to evaluate potential future on-site and/or adjacent off-site noise sources. If the preliminary information cannot demonstrate compliance with noise standards, a project specific acoustical analysis shall be required. Submit information/analysis to the DEHS for review and approval. For information and acoustical checklist, contact DEHS at 800.442.2283.

104. **Food Establishments.** Plans for wholesale food distributors or other food establishments shall be reviewed and approved by DEHS. For information, call DEHS/Plan Check at: 1-800-442-2283.

**COUNTY FIRE DEPARTMENT – Community Safety Division (760) 995-8190/ (909) 386-8465/LOCAL FIRE JURISDICTION**

105. **Building Plans.** Not less than three (3) complete sets of Building Plans shall be submitted to the Fire Department for review and approval.

106. **Fire Flow Test.** Your submittal did not include a flow test report to establish whether the public water supply is capable of meeting your project fire flow demand. You will be required to either produce a current flow test report from your water purveyor demonstrating that the fire flow demand is satisfied or you must install an approved fire sprinkler system. This requirement shall be completed prior to combination inspection by Building and Safety. [F05B] 3000 GPM at 20 psi for 4 hours

107. **Water System Large Commercial.** A water system approved and inspected by the Fire Department is required. The system shall be operational, prior to any combustibles being stored on the site. The applicant is required to provide a minimum of one new six (6) inch fire hydrant assembly with one (1) two and one half (2 1/2) inch and two (2) four (4) inch outlet. All fire hydrants shall be spaced no more than three hundred (300) feet apart (as measured along vehicular travelways) and no more than one hundred fifty (150) feet from any portion of a structure. [F54A]

CEQA Mitigation Measures are shown in Italic
108. **Combustible Protection.** Prior to combustibles being placed on the project site an approved paved road with curb and gutter and fire hydrants with an acceptable fire flow shall be installed. The topcoat of asphalt does not have to be installed until final inspection and occupancy. [F44]

109. **Single Story Road Access Width:** All buildings shall have access provided by approved roads, alleys and private drives with a minimum twenty six (26) foot unobstructed width and vertically to fourteen (14) feet six (6) inches in height. Other recognized standards may be more restrictive by requiring wider access provisions.

110. **Multi-Story Road Access Width:**

   Buildings three (3) stories in height or more shall have a minimum access of thirty (30) feet unobstructed width and vertically to fourteen (14) feet six (6) inches in height. [F41]

111. **High-Piled Storage.** The applicant shall submit an application for high-piled storage (internal storage over 12’ in height), three (3) sets of detailed plans and a commodity analysis report to the Fire Department for review and approval. The applicant shall submit the approved plan to Building and Safety for review with building plans. If the occupancy classification is designated as S-2, commodities to be stored will be limited to products of light hazard classification only. The required fees shall be paid at the time of plan submittal. Standard 8101 [F66]

112. **Street Sign.** This Project is required to have an approved street sign (temporary or permanent). The street sign shall be installed on the nearest street corner to the project. Installation of the temporary sign shall be prior to any combustible material being placed on the construction site. Prior to final inspection and occupancy of the first structure, the permanent street sign shall be installed. Standard 901.4.4 [F83]

**DEPARTMENT OF PUBLIC WORKS – Surveyor 909.387.8149**

113. **Record of Survey.** Pursuant to Sections 8762(b) and/or 8773 of the Business and Professions Code, a Record of Survey or Corner Record shall be filed under any of the following circumstances:
   
   a. Monuments set to mark property lines or corners;
   
   b. Performance of a field survey to establish property boundary lines for the purposes of construction staking, establishing setback lines, writing legal descriptions, or for boundary establishment/mapping of the subject parcel;
   
   c. Any other applicable circumstances pursuant to the Business and Professions Code that would necessitate filing of a Record of Survey.

**DEPARTMENT OF PUBLIC WORKS – Solid Waste Management 909.386.8701**

114. **Construction and Demolition Waste Management Plan (CDWMP) Part 1 –** The developer shall prepare, submit, and obtain approval from SWMD of a CDWMP Part 1 for each phase of the project. The CWMP shall list the types and weights or volumes of solid waste materials expected to be generated from construction. The CDWMP shall include options to divert from landfill disposal, materials for reuse or recycling by a minimum of 50% of total weight or volume. Forms can be found on our website at [http://cms.sbcounty.gov/dpw/solidwastemanagement.aspx](http://cms.sbcounty.gov/dpw/solidwastemanagement.aspx). An approved CDWMP Part 1 is required before a demolition permit can be issued.

**PRIOR TO FINAL INSPECTION OR OCCUPANCY**

The Following Shall Be Completed

**LAND USE SERVICES DEPARTMENT – Planning Division 909.387.8311**

115. **Installation of Improvements.** All required on-site improvements shall be installed per approved plans.

116. **Shield Lights.** Any lights used to illuminate the site shall include appropriate fixture lamp types as listed in SBCC Table 83-7 and be hooded and designed so as to reflect away from adjoining properties and public thoroughfares and in compliance with SBCC Chapter 83.07, “Glare and Outdoor Lighting” (i.e. “Dark Sky Ordinance”).

*CEQA Mitigation Measures are shown in Italics*
117. **CCRF/Occupancy.** Prior to occupancy/use, all Condition Compliance Release Forms (CCRF) shall be completed to the satisfaction of County Planning with appropriate authorizing signatures from each affected agency.

118. **Screen Rooftop.** All roof top mechanical equipment is to be screened from ground vistas.

119. **Landscaping/Irrigation.** All landscaping, dust control measures, all fences, etc. as delineated on the approved Landscape Plan shall be installed. The developer shall submit the Landscape Certificate of Completion verification as required in SBCC Section 83.10.100. Supplemental verification should include photographs of the site and installed landscaping.

120. **Wheel Stops.** All back-in truck trailer parking spaces shall have a wheel stop or other physical barrier twelve feet from any wall, fence or building to prevent damage. All other vehicle spaces shall have wheel stops or curbs installed when adjacent to fences, walls or buildings; these shall be three feet (3’) away from such facilities.

121. **Signs.** Prior to occupancy, the developer shall provide verification that the one freestanding sign is installed. All signs must comply with and be permitted in accordance with SBCC §83.13, Sign Regulations.

122. **Disabled Access.** Disabled access parking spaces shall be clearly marked as disabled spaces and said markings shall be maintained in good condition at all times.

123. **Fees Paid.** Prior to final inspection by the Building and Safety Division and/or issuance of a Certificate of Conditional Use by the Planning Division, all fees required under actual cost job number P201500091 shall be paid in full.

124. **75% Solid Waste Diversion Program (GHG Reduction Measure R2W6).** The developer/owner/operator shall require all future tenants to provide commercial/industrial recycling programs that fulfills an on-site goal of 75% diversion of solid waste (5 points).

125. **GHG – Installation/Implementation.** The developer shall submit for review and obtain approval from County Planning evidence that all applicable GHG reduction measures have been installed, implemented and that specified performance objectives are being met.

**LAND USE SERVICES DEPARTMENT – Building and Safety Division 909.387.8311**

126. **Condition Compliance Release Form Sign-off.** Prior to occupancy all Department/Division requirements and sign-off’s shall be completed.

**LAND USE SERVICES DEPARTMENT – Land Development Division – Drainage Section 909.387.8311**

127. **Drainage Improvements.** All required drainage improvements shall be completed by the applicant. The private registered engineer shall inspect improvements outside the County right-of-way and certify that these improvements have been completed according to the approved plans. Certification letter shall be submitted to Land Development.

128. **WQMP Improvements.** All required WQMP improvements shall be completed by the applicant, inspected and approved by County Public Works. An electronic file of the final and approved WQMP shall be submitted to Land Development Division, Drainage Section.

**LAND USE SERVICES DEPARTMENT – Land Development Division – Road Section 909.387.8311**

129. **LDD Requirements.** All LDD requirements shall be completed by the applicant prior to occupancy.

130. **Road Improvements.** All required on-site and off-site improvements shall be completed by the applicant, inspected and approved by County Public Works. Completion of road and drainage improvements does not imply acceptance for maintenance by the County.

*CEQA Mitigation Measures are shown in Italics*
131. **Private Roads/Improvements.** All required on-site and off-site improvements shall be completed by the applicant. Construction of private roads and private road related drainage improvements shall be inspected and certified by the engineer. Certification shall be submitted to Land Development by the engineer identifying all supporting engineering criteria.

132. **Open Roads/Cash Deposit.** Existing County roads, which will require reconstruction, shall remain open for traffic at all times, with adequate detours, during actual construction. A cash deposit shall be made to cover the cost of grading and paving prior to issuance of road encroachment permit. Upon completion of the road and drainage improvement to the satisfaction of the Department of Public Works, the cash deposit may be refunded.

133. **Structural Section Testing.** A thorough evaluation of the structural road section, to include parkway improvements, from a qualified materials engineer shall be submitted to County Public Works.

134. **Parkway Planting.** Trees, irrigation systems, and landscaping required to be installed on public right-of-way shall be approved by County Public Works and Planning. It shall be maintained by the adjacent property owner or other County-approved entity.

**DEPARTMENT OF PUBLIC WORKS – Traffic Division 909.387.8186**

135. The applicant shall construct, at 100% cost to the applicant all roadway improvements as shown on their approved street improvement plans.

136. **The Applicant shall be responsible for the construction of driveway approaches along Orange Street, Linden Avenue, and Cedar Place.**

   [Mitigation Measure XVI-1] - Prior to Building Occupancy/County Traffic

137. **Orange Street:** Prior to the issuance of an occupancy permit from the County of San Bernardino, Orange Street, west of Cedar Avenue to Linden Avenue shall be restriped to provide a centerline stripe and an eastbound left-turn lane, a distance of approximately 425 feet west of Cedar Avenue. The Applicant shall be responsible for costs associated with this improvement.

   [Mitigation Measure XVI-2] - Prior to Building Occupancy Permit Issuance/County Traffic

138. **Cedar Avenue at Valley Boulevard:** The Applicant shall be responsible for the following improvements pending the final design for the I-10/Cedar Avenue Interchange Improvements Project. Convert the eastbound right turn lane to an eastbound shared thru-right lane. Adjust the AM peak period signal timing so that the eastbound left, westbound left, and southbound left are lagging phases. The eastbound right lane shall be restriped to an eastbound shared thru-right-turn lane. The eastbound approach shall provide two left-turn lanes, a thru lane, a shared thru-right-turn lane, and a right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right. The northbound direction approach shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The southbound approach shall provide two left-turn lanes, two thru lanes, and a shared thru-right.

   [Mitigation Measure XVI-3] - Prior to Building Occupancy/County Traffic

139. **Cedar Avenue (north-south) at Cedar Place (east-west):** Prior to the issuance of an occupancy permit from the County of San Bernardino, the following improvements shall be completed and the cost associated with these improvements shall be the responsibility of the Applicant. Restrict Cedar Place to right-in and right-out movements at Cedar Avenue. Cedar Place in the eastbound direction shall provide a single right-turn lane. The Cedar Avenue northbound shared left-thru-lane shall be converted to a thru lane. The northbound direction shall provide two thru lanes; the southbound direction shall provide a thru and a shared thru-right lane.

   [Mitigation Measure XVI-4] - Prior to Building Occupancy/County Traffic

140. **Cedar Avenue at Orange Street:** The Applicant shall be responsible for the following improvements. Orange Street shall be striped to accommodate additional lanes. The eastbound approach shall provide a left-turn lane and a shared thru-right lane. The westbound direction shall be restriped to include a dedicated westbound left-turn pocket. The westbound approach shall provide a left-turn lane and a shared thru-right turn lane. The northbound direction approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a right-turn lane.

   [Mitigation Measure XVI-5] - Prior to Building Occupancy/County Traffic
141. **Project Driveway on Orange Street:** The Applicant shall be responsible for the following improvements. Provide a full access driveway 250 feet west of Cedar Avenue. The eastbound direction shall provide a left turn lane. The westbound direction shall provide a shared thru-right-turn lane. The southbound direction shall provide a shared left-right-turn lane.  
[Mitigation Measure XVI-6] - Prior to Building Occupancy/County Traffic

142. **Linden Avenue at Slover Avenue:** The intersection shall be signalized. The improvements are to be installed as other area projects develop as determined by the County. The Applicant shall pay a fair share contribution for the intersection improvements.  
[Mitigation Measure XVI-7] - Prior to Building Occupancy/County Traffic

143. **Cedar Avenue at Valley Boulevard:** Intersection improvements include widening along Cedar Avenue to accommodate additional travel lanes. An eastbound right-turn lane shall be converted to a thru lane. The eastbound direction shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The westbound direction shall provide two left-turn lanes, a thru lane, and a shared thru-right-turn lane. The northbound direction shall be widened to accommodate a thru and right lane. The northbound approach shall provide two left-turn lanes, three thru lanes, and two right-turn lanes. The southbound direction shall be widened to accommodate an additional thru lane; the shared thru right-turn lane is to be converted to a right-turn only lane. The southbound approach shall provide a left-turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.  
[Mitigation Measure XVI-8] - Prior to Building Occupancy/County Traffic

144. **Cedar Avenue at I-10 Westbound Ramps:** Intersection improvements include widening at all approaches to accommodate additional lanes. The westbound direction shall be widened to accommodate a left and a right-turn lane. The westbound approach shall provide a left-turn lane, a shared left-thru lane, and two right-turn lanes. The northbound direction shall be widened to accommodate a left and thru lane. The northbound approach shall provide two left-turn lanes and three thru lanes. The southbound direction shall be widened to accommodate two thru and a right-turn lane. The southbound approach shall provide five thru lanes and two right-turn lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project’s contribution to significant impacts.  
[Mitigation Measure XVI-9] - Prior to Building Occupancy/County Traffic

145. **Cedar Avenue at I-10 Eastbound Ramps:** Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left-turn and a right-turn lane. The eastbound approach shall provide two left-turn lanes, a shared thru-right lane, and a right-turn lane. The northbound direction shall be widened to accommodate two thru and a right-turn lane. The northbound approach shall provide four thru lanes and two right-turn lanes. The southbound approach shall be widened to accommodate a left and thru lane. The southbound approach shall provide two left-turn lanes and three thru lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project’s contribution to significant impacts.  
[Mitigation Measure XVI-10] - Prior to Building Occupancy/County Traffic

146. **Cedar Avenue at Cedar Place:** Intersection improvements include widening along Cedar Avenue to accommodate additional lanes and a striped median restricting left-turn in and left-turn out of Cedar Place. The eastbound direction shall provide an exclusive right-turn lane. The northbound direction shall be widened to accommodate an additional thru lane. The northbound approach shall provide a three thru lanes. The southbound direction shall be widened to accommodate an additional thru lane. The southbound approach shall provide two thru lanes and a shared thru-right-turn lane. These improvement shall be implemented as a part of the I-10/Cedar Avenue Interchange Project.  
[Mitigation Measure XVI-11] - Prior to Building Occupancy/County Traffic

147. **Cedar Avenue at Orange Street:** Intersection improvements include widening along Cedar Avenue to accommodate additional lanes. The eastbound direction shall provide a left-turn lane and a shared thru-right-turn lane. The westbound direction shall provide a shared left-thru-right-turn lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The southbound right-turn lane shall be converted to a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.  
[Mitigation Measure XVI-12] - Prior to Building Occupancy/County Traffic

CEQA Mitigation Measures are shown in Italics
148. **Cedar Avenue at Slover Avenue**: Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left and thru lane. The eastbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The westbound direction shall be widened to accommodate a left-turn lane; the right-turn lane shall be converted to a shared thru-right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right lane. The southbound approach shall be widened to accommodate a right-turn lane. The southbound approach shall provide a left turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

[Mitigation Measure XVI-13] - Prior to Building Occupancy/County Traffic

149. **Linden Avenue and Slover Avenue**: The following improvements shall be constructed as Slover Phase 2 is implemented by the County of San Bernardino. The County is currently in the design phase for Slover Phase 2 Improvements. The Slover Phase 2 improvements include widening along the east and westbound approaches. The eastbound approach shall be widened to accommodate an additional thru lane. The eastbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The westbound approach shall be widened to accommodate a left-turn lane and a thru lane. The westbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The northbound and southbound approaches shall continue to provide a shared left-thru-right lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

[Mitigation Measure XVI-14] - Prior to Building Occupancy/County Traffic

**LAND USE SERVICES DEPARTMENT - Code Enforcement 909.387.8311**

150. **Sign Registration**. Prior to installation of any freestanding, wall, roof, projecting or monument sign, an approved sign registration application and plot plan are required.

**COUNTY FIRE DEPARTMENT – Community Safety Division (760) 995-8190) / (909) 386-8465/LOCAL FIRE JURISDICTION**

151. **Fire Sprinkler – NFPA #13**. An automatic fire sprinkler system complying with NFPA Pamphlet #13 and the Fire Department standards is required. The applicant shall hire a Fire Department approved fire sprinkler contractor. The fire sprinkler contractor shall submit three sets of detailed plans to the Fire Department for review and approval. The plans (minimum 1/8” scale) shall include hydraulic calculations and manufacturer’s specification sheets. The contractor shall submit plans showing the type of storage and use with the applicable protection system. The required fees shall be paid at the time of plan submittal. Standard 101.1.[F59]

152. **Roof Certification**. A letter from a licensed structural (or truss) engineer shall be submitted with an original wet stamp at the time of fire sprinkler plan review, verifying the roof is capable of accepting the point loads imposed on the building by the fire sprinkler system design.

153. **Fire Alarm**. An automatic monitoring fire alarm system complying with the California Fire Code, NFPA and all applicable codes is required for 100 heads or more. The applicant shall hire a Fire Department approved fire alarm contractor. The fire alarm contractor shall submit three (3) sets of detailed plans to the Fire Department for review and approval. The required fees shall be paid at the time of plan submittal. [F62]

154. **Smoke and Heat Removal**. Mechanical smoke removal systems shall be provided for building protected by EFSR sprinkler systems as required by the Chief. The mechanical smoke removal systems shall meet the requirements of UFC Standard 81-3 and the including the following:

a. A central control room for fire department operations shall be provided. The location and accessibility of the central control station room shall be approved by the Fire Department. The central control station room shall be separated from the remainder of the building by not less than a one-hour fire-resistive occupancy separation. The room shall be a minimum of Two Hundred Sq.Ft (200 s.f.) with a minimum dimension of 8 (2438mm). It shall contain the following as a minimum:

1. The fire alarm control panel and system site map.

2. Status indicators and control for mechanical smoke remove removal system.

CEQA Mitigation Measures are shown in Italic
3 Sprinkler valve and water-flow detector display panels.

4 Schematic building plans indicating the typical floor plan, means of egress, fire-protection systems, firefighting equipment and access.

5 Other fire-protection equipment and system controls as required by the chief.

6 Lighting for the central control station shall have emergency lighting powered by the standby electrical system.

b. A standby power-generator set conforming to Electrical Code shall be provided on premises. The set shall supply all functions required by this section at full power. Set supervisions with manual start and transfer override features shall be provided at the central control station.

155. Commercial – Large Facility Addressing. Commercial and industrial developments in excess of 100,000 sq. ft. shall have the street address installed on the building with numbers that are a minimum twelve (12) inches in height and with a one and one half (1 1/2) inch stroke. The street address shall be visible from the street. During the hours of darkness, the numbers shall be electrically illuminated (internal or external). Where the building is two hundred (200) feet or more from the roadway, additional non-illuminated contrasting six (6) inch numbers shall be displayed at the property access entrances. [F83]

156. Key Box. An approved Fire Department key box is required. The key box shall be provided with a tamper switch and shall be monitored by a Fire Department approved central monitoring service. In commercial, industrial and multi-family complexes, all swing gates shall have an approved Fire Department Knox® Lock. The Knox Box brand key box application shall be obtained from the Redlands City Fire Department.

157. Override Switch. Where an automatic electric security gate is used, an approved Fire Department override switch (Know ©) is required. Standard 902.4 [F86]

158. Fire Lanes. The developer shall submit a fire lane plan to the Fire Department for review and approval. Fire lane curbs shall be painted red. The “No Parking, Fire Lane” signs shall be installed on public and/or private roads in accordance with the approved plan.

159. Additional Requirements. In addition to the Fire requirements stated herein, other on-site and off-site improvements may be required which cannot be determined from tentative plans at this time and would have to be reviewed after more complete improvement plans and profiles have been submitted to this office. [F01A]

COUNTY FIRE DEPARTMENT - Hazardous Materials Division 909.386.8401

160. Handlers Permit. Prior to occupancy, operator shall submit disclosure information using the California Environmental Reporting System (CERS) for emergency release or threatened release of hazardous materials and wastes or apply for exemption from hazardous materials laws and regulations. Contact Office of the Fire Marshal, Hazardous Materials Division at (909) 386-8401.

161. Haz-Mat Approval. Prior to occupancy, applicant shall be required to apply for one or more of the following: a Hazardous Materials Handler Permit, a Hazardous Waste Generator Permit, an Aboveground Storage Tank Permit, and/or an Underground Storage Tank Permit. For information, Office of the Fire Marshal, Hazardous Materials Division at (909) 386-8463.

DEPARTMENT OF PUBLIC WORKS – Solid Waste Management 909.386.8701

162. Construction and Demolition Waste Management Plan (CDWMP) Part 2 – The developer shall complete SWMD’s CDWMP Part 2 for construction and demolition. This summary shall provide documentation of actual diversion of materials including but not limited to receipts, invoices or letters from diversion facilities or certification of reuse of materials on site. The CDWMP Part 2 shall provide evidence to the satisfaction of SWMD that demonstrates that the project has diverted from landfill disposal, material for reuse or recycling by a minimum of 50% of total weight or volume of all construction waste.

San Bernardino County

Land Use Services Department, Planning Division

385 N. Arrowhead Ave, San Bernardino, CA 92415

Thrifty Oil Co. is submitting this letter of intent with the application for a Conditional Use Permit to allow for the construction of one high-cube warehouse building (or other allowable uses permitted by zoning) on approximately 19.14 acre project site. The Building proposed to be constructed on APM 0253-171-16, northwest of the intersection of Cedar Avenue at Orange Street. The Building would be a 371,442sf warehouse on 19.14 acres. Below is a summary of the project

High-cube warehouses or distributions centers are primarily for the storage and/or consolidation of manufactured goods prior to their distribution to retail locations or other warehouses. These facilities are generally very large buildings characterized by a small employment count due to a high level automation, and truck activities are frequently outside of the peak hour of the adjacent street system. There are no specific tenants for the project, so specific number of employees and hours of operation are not yet known. The operational design criteria for warehouses accommodating high-cube uses is associated with the functional requirements of the product/material handling equipment used in operating the facility (e.g., trucks, forklifts, pallets and racking). The geometrics of the trucks and their maneuvering capabilities, forklift configurations, pallet sizes, and racking systems strategies are factors use to determine the operational design criteria of the warehouse. These criteria combined with site geometry determine the plan layout (including access), truck door spacing, aisle widths and depths, and column bay spacing.

PROJECT DESCRIPTION

The proposed project would allow for the construction and operation of a 371,442-square-foot (sf) high-cube warehouse distribution center inclusive of 10,000 sf of office/administrative uses. Table 1 provides a statistical summary for the proposed project. The project site is approximately 18.8 net acres (Assessor Parcel Number [APN] 0253-171-16), and is located northwest of the intersection of Cedar Avenue at Orange Street in the community of Bloomington in unincorporated San Bernardino County. The site is generally bound to the north by the Union Pacific Railroad Yard (including tracks and vacant property), and Interstate 10 (I-10); to the south by Orange Street; to the east by Cedar Place and Cedar Avenue; and to the west by Linden Avenue.

High-cube warehouses or distribution centers are primarily for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses but may also accommodate manufacturing uses. These facilities are generally very
large buildings characterized by a small employment count due to a high level of automation, and truck activities are frequently outside of the peak hours of the adjacent street system.

ac: acre; sf: square feet; ft: feet; in: inch; n/a: not applicable

The operational design criteria for warehouses accommodating high-cube uses is associated with the functional requirements of the product/material handling equipment used in operating the facility (e.g., trucks, forklifts, pallets, and racking). The geometrics of trucks and their maneuvering capabilities, forklift configurations, pallet sizes, and racking systems strategies are factors used to determine the operational design criteria of the warehouse. These criteria combined with site geometry determine the plan layout (including access), truck door spacing, aisle widths and depths, and column bay spacing.

As shown on Figure 3: Site Plan, the warehouse would be approximately 1,022 feet long (east-to-west) and 354 feet wide (north-to-south). It would be a cross-dock facility with vertical-lift dock-high roll up doors. There would be 84 dock doors: 35 dock doors on the northern side of the warehouse and 49 dock doors on the southern side of the warehouse. Truck maneuvering and staging would be located along the north and south sides of the warehouse to allow access for the loading and unloading of products from trucks/trailers. The warehouse doors and staging areas would be accessible to trucks through the ingress/egress drive aisles. The facility would be a concrete tilt-up structure.
Site Access

Vehicular access would be provided at the following locations. All points on ingress/egress would be unsignalized.

- Orange Street: One full access inbound/outbound driveway would be located on Orange Street. The joint truck and passenger vehicle entrance would provide a 40-foot-wide driveway with over 100 feet of truck queuing between the street and the on-site gate. From this location, trucks could move within the project site to access the loading docks on the north and south sides of the facility.

- Linden Avenue: Two access points are proposed on Linden Avenue. The northern inbound/outbound access would be located at the cul-de-sac terminus of Linden Avenue. The southern access is located north of the intersection of Orange Street at Linden Avenue. Both are joint truck and passenger vehicle entrances with 40-foot-wide driveways. The northern access would have inbound and outbound on-site truck queuing. The southern access would have inbound truck queuing between the street and the gates, and outbound queuing on the site. From these two locations, trucks can move within the project site to access the loading docks on the north and south sides of the warehouse.

- Cedar Place: Vehicular access to Cedar Place would be from southbound Cedar Avenue; access would be limited to right-turn only inbound/outbound movements. Two access points into the project site would be provided from Cedar Place. The northern inbound/outbound access would be located near the end of the cul-de-sac terminus of Cedar Place. The joint truck and passenger vehicle entrance would provide a 40-foot-wide driveway with approximately 150 feet of truck queuing between the street and the gate. From this location, trucks could move within the project site to access the loading docks on the north side of the facility. The southern 26-foot-wide driveway would be limited to passenger vehicle access.

Parking

All passenger vehicle and truck trailer parking would be provided on site. The proposed project would provide 179 parking stalls for employees and visitors, inclusive of handicap parking stalls, which exceeds County parking requirements by 18 stalls. Passenger vehicle parking would be located primarily on the east and west sides of the warehouse with additional parking on the southeast corner of the parcel and limited parking on the north side of the warehouse.

The project would provide 57 trailer parking stalls and 37 container parking stalls located on the north and south sides of the warehouse.

Landscaping, Fencing, and Lighting

Of the approximately 18.8-acre site, approximately 2.9 acres (or approximately 15.2 percent) of the site would be landscaped with drought-tolerant plant materials. The County of San Bernardino requires a minimum 15 percent landscape coverage. Trees, shrubs, and ground cover would be provided along the street frontages, with additional landscaping provided along the northern site border and passenger vehicle parking areas.

All truck and staging areas would be screened with 14-foot-high solid material (concrete) walls to obscure the visibility of these areas from public view. The walls would incorporate reveals and other architectural details. Drought-tolerant landscaping would provide for additional screening.

Site lighting would be used to provide adequate lighting for circulation, safety, and security. Outdoor lighting for the parking areas would be provided consistent with the requirements of the County.

Hours of Operations and Employees

The tenant(s) of the warehouse distribution facility has not been identified, so the precise nature of the facility operation cannot be determined at this time. With respect to operations, the analysis presented in
this Initial Study assumes that warehouse facility could operate seven days per week in two, eight-hour shifts. The estimated number of employees is 100.

**Infrastructure and Off-site Improvements**

Water extensions to the project site would be provided from existing lines in Orange Street, just east of Cedar Avenue. The majority of runoff would surface flow into various on-site catch basins into a private on-site storm drain system. The project site includes two detention/infiltration basins: one basin (Basin A) near the northeast corner of the property adjacent to Cedar Place, and one basin (Basin B) at the southeast corner of the property adjacent to the corner of Orange Avenue at Cedar Avenue. Any overflow from Basin A would flow into Basin B. Any additional overflow from both basins would flow into a concrete spillway that outlets to Orange Avenue, and ultimately conveyed to the existing off-site municipal storm drain.

Wastewater management would be handled either through an on-site septic system or through a connection to the City of Rialto wastewater collection system. Should a septic system be implemented, wastewater would be conveyed to an on-site septic system located beneath the detention basin/infiltration basin on the southeast corner of the project site.

If the septic system option for wastewater management is not selected, the project would be designed to accommodate the connection of the property to the City of Rialto sewer system. Should the project connect to the City's wastewater collection system, a sewer line connection would be constructed in Orange Street from the project driveway proximate to Cedar Avenue, and would extend east to the existing manhole in the intersection of Orange Street at Larch Avenue. These off-site improvements would be located within the street right-of-ways.

**Construction Schedule**

For purposes of this environmental analysis, construction is assumed to commence in 2017 with a construction duration of approximately eight months. Initial site improvements including grading and underground infrastructure and utility improvements would be followed by construction activities. Total grading for the project is estimated to require 59,300 cubic yards (cy) of cut and 36,400 cy of fill, with a net difference of 22,900 cy of fill. When accounting for over-excavation, shrinkage, and subsidence, the grading quantities are expected to balance on site.

**Project Approvals**

The County of San Bernardino is the Lead Agency under CEQA and is responsible for reviewing and approving this Initial Study/Mitigated Negative Declaration. As part of the proposed project's implementation, the County would also consider the following discretionary approval:

- Conditional Use Permit

In addition to the approvals identified above, the project is subject to other ministerial actions by the County as part of project implementation. Subsequent activities would be examined in light of the Initial Study/Mitigated Negative Declaration to determine whether additional CEQA review would be required pursuant to the requirements of Section 21166 of the CEQA Statutes (i.e., *Public Resources Code § 21166*) and Sections 15162 and 15168 of the State CEQA Guidelines (i.e., 14 CCR) for subsequent approvals, including but not limited to the following:

- Grading Permits
- Building Permits
- Utility Connections
ENVIRONMENTAL/EXISTING SITE CONDITIONS:
The project site is an approximately 18.8-net-acre parcel located northwest of the intersection of Cedar Avenue at Orange Street in the community of Bloomington in unincorporated San Bernardino County. The community of Bloomington is located entirely within the Spheres of Influence of the cities of Rialto and Fontana; the project site is within the City of Rialto’s Sphere of Influence. Figure 1: Regional Location and Figure 2: Project Vicinity, depict the project site in a regional and local context, respectively.

The project site is relatively flat with slopes of less than two percent. The site ranges in elevation from northeast to southwest from approximately 1,090 feet above mean sea level (msl) to approximately 1,077 feet above msl, respectively. The parcel is predominately vacant with the exception of broken asphalt, three concrete rubble piles, and modern trash. Topographic maps and aerial photographs dating to 1901 show only agricultural uses on the site. The on-site vegetation consists almost entirely of non-native grassland and ruderal vegetation.

The project site (APN 0253-171-16) is generally bounded to the north by the Union Pacific Railroad Yard (including tracks and vacant property), and I-10; to the south by Orange Street; to the east by Cedar Place and Cedar Avenue; and to the west by Linden Avenue. Land uses bordering the site include vacant land to the east of Cedar Avenue, and vacant lots and approximately 13 existing single-family residences to the south of Orange Street. The adjacent property to the west contains an existing freight transport terminal and the property to the north is part of the Union Pacific Railroad Yard.

Figure 2: Project Vicinity
EVALUATION FORMAT

This Initial Study is prepared in compliance with the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21000, et seq. and the State CEQA Guidelines (California Code of Regulations Section 15000, et seq.). Specifically, the preparation of an Initial Study is guided by Section 15063 of the State CEQA Guidelines. The project is evaluated based upon its effect on 17 major categories of environmental factors. Each factor in the Initial Study Checklist is reviewed by responding to a series of questions regarding the impact of the project on each element of the overall factor. The effect of the project is categorized into one of the following four categories of possible determinations:

- Potentially Significant
- Less than Significant with Mitigation
- Less than Significant
- No Impact

Substantiation is then provided to justify each determination. One of the four following conclusions is then provided as a summary of the analysis for each of the major environmental factors.

1. **No Impact**: No impacts are identified or anticipated and no mitigation measures are required.
2. **Less than Significant Impact**: No significant adverse impacts are identified or anticipated and no mitigation measures are required.
3. **Less than Significant Impact with Mitigation Incorporated**: Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as a condition of project approval to reduce these impacts to a level below significant.
4. **Potentially Significant Impact**: Significant adverse impacts have been identified or anticipated. An Environmental Impact Report (EIR) is required to evaluate these impacts.

At the end of the analysis the required mitigation measures are restated and categorized as being either self-monitoring or as requiring a Mitigation Monitoring and Reporting Program.
ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- Aesthetics
- Biological Resources
- Greenhouse Gas Emissions
- Land Use/Planning
- Population/Housing
- Transportation/Traffic
- Agriculture & Forestry Resources
- Cultural Resources
- Hazards & Hazardous Materials
- Mineral Resources
- Public Services
- Utilities / Service Systems
- Air Quality
- Geology/Soils
- Hydrology/Water Quality
- Noise
- Recreation
- Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation, the following finding is made

☐ The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ Although the proposed project could have a significant effect on the environment, there will not be significant effect in this case because revisions in the project have been made by or agreed to by th project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ Although the proposed project could have a significant effect on the environment, because all potential significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

### SUBSTANTIATION (Check ☐ if project is located within the viewshed of any Scenic Route listed in the General Plan):

**I-a)** **No Impact.** The proposed project would not result in scenic view obstructions because of the predominately built-out nature of the surrounding area. According to the County of San Bernardino 2007 General Plan (General Plan), the project site is not located within or adjacent to a County-designated Scenic Corridor. Because there are no scenic vistas in the vicinity of the project site, the proposed project would have no impacts in this regard.

**I-b)** **No Impact.** There are no officially-designated or eligible for designation County or State scenic highways proximate to the project site. No impact would occur.

**I-c)** **Less Than Significant Impact.** The proposed project would change the character of the project site from a vacant property adjacent to roads, railroad tracks, and a freeway to a developed site with a warehouse distribution center. Construction of the proposed project may create temporary aesthetic nuisances associated with construction activities. Exposed surfaces, construction debris, equipment, and trucks may be visible. This visual impact associated with the construction of the project would be characteristic development activities found at a typical small construction site. These activities would cease upon project completion and would not result in a substantial degradation to the site or surrounding area. Therefore, short-term visual changes associated with construction activities are considered less than significant.

The project site's surroundings are mostly urbanized and contain manufacturing and industrial, residential, and institutional land uses with a vacant parcel located to the east of Cedar Avenue. The project site is vacant. The proposed project would not substantially degrade the existing visual character or quality of the site and its surroundings; the development would be compatible with existing and planned land uses in the area. The project would incorporate

---

landscaping and all truck and staging areas would be screened with 14-foot-high solid material walls to obscure the visibility of these areas from public view. The walls would incorporate reveal and other architectural details. Drought-tolerant landscape materials would provide additional screening, as well as enhance the appearance of the site.

1-d) **Less Than Significant Impact.** The primary source of light associated with the proposed project would be from exterior sources (e.g., street lighting, parking lot lighting, building accent lighting, security lighting, and landscape accent lighting). Depending upon the location of the light sources and proximity to adjacent light sensitive uses, lighting can be a nuisance, affecting adjacent areas and diminishing the view of the clear night sky. Light spillage is typically defined as unwanted illumination from light fixtures on adjacent properties. Perceived glare is the unwanted and potentially objectionable results from looking directly into a light source of a luminary.

The area surrounding the project site is predominately urbanized. The project would introduce nighttime lighting onto the vacant property. However, there are various sources of nighttime lighting in the area associated with existing residential, warehouse/manufacturing, and institutional uses, as well as street lighting and lighting associated with I-10 and the freeway overcrossing. The lighting for the high-cube warehouse would be designed in accordance with the County's Development Code which requires that outdoor lighting for commercial or industrial land uses be fully shielded to preclude light pollution or light trespass on adjacent uses. Perimeter lighting for the proposed project would generally be directed inward towards the site and away from residential uses south of Orange Street. The proposed project would install a perimeter wall around the project boundaries, reducing the visibility of lighting on surrounding land uses. The project would not use building materials (i.e., reflective glass) or lighting that would cause glare. Therefore, the introduction of new light sources to the project site and glare impacts would be less than significant.

No significant adverse impacts are identified or anticipated and no mitigation measures are required. The project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.
II. AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? ☐ ☐ ☐ ☒

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract? ☐ ☐ ☐ ☒

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))? ☐ ☐ ☐ ☒

d) Result in loss of forest land or conversion of forest land to non-forest use? ☐ ☐ ☐ ☒

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use? ☐ ☐ ☐ ☒

SUBSTANTIATION (Check ☐ if project is located in the Important Farmlands Overlay):

II-a) No Impact. No agricultural resources exist on the project site. The project site is identified as Urban and Built-Up Land on the Farmland Mapping and Monitoring Program map prepared by the Department of Conservation\(^2\). This farmland category defines Urban and Built-Up Land as land developed at a density of at least 1 dwelling unit (du) per 1.5 acres, or approximately 6 structures to a 10-acre parcel. Land uses include but are not limited to residential, industrial, office/commercial, institutional, and public administration. The project site does not contain any

land that is designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. The proposed project would therefore have no impact to designated farmland.

II-b) No Impact. A Williamson Act contract between local governments and private land owners restricts specified parcels of land to agricultural or related open space use in return for a lower property tax assessment. The project site is zoned IC (Community Industrial) and is not under a Williamson Act land conservation contract. Development of the proposed project would not conflict with either existing zoning for agricultural uses or with lands under a Williamson Act Contract. Therefore, no impacts would occur.

II-c) No Impact. The property site was previously developed and the surrounding area is predominately urbanized. The property located to the east of Cedar Avenue is currently vacant but was previously developed. There are no forest or timberland areas proximate to the project. The project site is zoned IC (Community Industrial). Also, the project site contains very few trees. On-site trees are predominately pepper and palm. Such vegetation is not characterized as a timberland or forestry resource. Project implementation would not result in the rezoning of forest land, timberland, or timberland zoned Timberland Production. No impacts would occur.

II-d) No impact. No forest land occurs within or adjacent to the project site. The proposed project site is zoned for industrial uses. No loss or conversion of forest land to non-forest use would occur. Therefore, no impact would occur.

II-e) No Impact. As previously noted, the project site does not contain any forest land or land used for agricultural production. Therefore, implementation of the proposed project would not result in the conversion of farmland to non-agricultural use.

No significant adverse impacts are identified and no mitigation measures are required.
### III. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

- **a)** Conflict with or obstruct implementation of the applicable air quality plan?
- **b)** Violate any air quality standard or contribute substantially to an existing or projected air quality violation?
- **c)** Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?
- **d)** Expose sensitive receptors to substantial pollutant concentrations?
- **e)** Create objectionable odors affecting a substantial number of people?

### SUBSTANTIATION:

An Air Quality Technical Report was prepared for the proposed project by Scientific Resources Associated (SRA, July 2016). The Air Quality Technical Report is included as Appendix A and the results are summarized herein.

#### III-a) Less Than Significant Impact

On December 7, 2012, the South Coast Air Quality Management District’s (SCAQMD) Governing Board approved the 2012 Air Quality Management Plan (2012 AQMP), which outlines its strategies for meeting the National Ambient Air Quality Standards (NAAQS) for particular matter less than 2.5 microns in diameter (PM$_{2.5}$) and ozone (O$_3$). The 2012 AQMP was forwarded to the California Air Resources Board (CARB) for inclusion into the California State Implementation Plan in January 2013. The 1-hour ozone attainment demonstration and vehicle miles traveled emissions offset demonstration was submitted through CARB to the United States Environmental Protection Agency (USEPA). According to the 2012 AQMP, two main criteria must be addressed.

**Criterion 1**

- **a)** Would the project result in an increase in the frequency or severity of existing air quality violations?
Since the consistency criteria identified under the first criterion pertains to pollutant concentrations, rather than to total regional emissions, an analysis of the project's pollutant emissions relative to localized pollutant concentrations is used as the basis for evaluating project consistency. Due to the short construction period and the fact that heavy equipment exhaust emissions are not significant, localized concentrations of carbon monoxide (CO), nitrogen oxides (NOx), particulate matter less than 10 microns in diameter (PM\(_{10}\)), and PM\(_{2.5}\) would be less than significant. Therefore, the proposed project would not result in an increase in the frequency or severity of existing air quality violations.

b) Would the project cause or contribute to new air quality violations?

The proposed project would result in emissions that would be below the SCAQMD thresholds. Therefore, the proposed project would not have the potential to cause or affect a violation of the ambient air quality standards.

c) Would the project delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP?

The proposed project would result in less than significant impacts with respect to localized concentrations during project construction and operations. As such, the proposed project would not delay the timely attainment of air quality standards or 2012 AQMP emissions reductions.

Criterion 2

Determining whether a project exceeds the assumptions reflected in the 2012 AQMP involves the evaluation of the three criteria below.

a) Would the project be consistent with the population, housing, and employment growth projections utilized in the preparation of the AQMP?

The project is estimated to have approximately 100 employees. As discussed later in the Land Use section of this Initial Study, the project is consistent with the General Plan and zoning designations for the project site. The population, housing, and employment forecasts, which are adopted by the Southern California Association of Governments’ (SCAG’s) Regional Council, are based on the local plans and policies applicable to the County; these are used by SCAG in all phases of implementation and review. As the SCAQMD has incorporated these same projections into the 2012 AQMP, it can be concluded that the proposed project would be consistent with the projections.

b) Would the project implement all feasible air quality mitigation measures?

The proposed project would result in less than significant air quality impacts. Compliance with emission reduction measures identified by the SCAQMD, such as Rules 402 and 403, would be required. SCAQMD Rule 402 requires that air pollutant emissions not be a nuisance off site. SCAQMD Rule 403 requires that fugitive dust be controlled with Best Available Control Measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. As such, the proposed project meets this AQMP consistency criterion.

c) Would the project be consistent with the land use planning strategies set forth in the AQMP?

The proposed project is located within a developed portion of the community, and is considered to be an infill development. The project site is located along Orange Street in the vicinity of similar uses including light industrial uses within the surrounding area.
In conclusion, the proposed project would not impact the region's ability to meet State and federal air quality standards. Also, the proposed project would be consistent with the goals and policies of the 2012 AQMP for the control of fugitive dust. The project's long-term influence would also be consistent with the SCAQMD and SCAG's goals and policies, and is therefore considered consistent with the 2012 AQMP.

III-b) Less Than Significant Impact

Construction Emissions

The proposed project involves construction activities associated with grading, paving, building construction, and architectural coating over an approximately eight-month period. Grading at the site is expected to require approximately 59,300 cubic yards (cy) of cut and 36,400 cy of fill, with a net difference of 22,900 cy of fill. When accounting for over-excavation, shrinkage, and subsidence, the grading quantities are expected to balance on site.

Table 2 identifies the construction emissions associated with the project assuming standard fugitive dust control measures would be implemented. The maximum simultaneous daily emissions for the proposed project would be below the SCAQMD maximum daily threshold significance criteria.

To evaluate potential localized impacts, a modeling analysis was conducted in accordance with the recommended approach in the Localized Significance Threshold (LST) Methodology. According to the Air Quality Technical Report, CO, NOx, PM2.5, and diesel exhaust emissions during construction would not result in a significant localized impact.

The project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation because the proposed use(s) do not exceed established thresholds of concern as established by the SCAQMD. A dust control plan would be required as a standard condition to regulate construction activities that could create windblown dust. Construction painting activities would be restricted as a standard condition; additional design considerations are required where applicable to further reduce impacts.

Long-Term Operational Emissions

Long-term air quality impacts would be associated with mobile source emissions generated from project traffic and stationary source emissions. The primary operational impacts associated with the project would be from vehicles. Minor impacts would be associated with area sources such as energy use, including combustion of natural gas, which is included in the calculations, and landscaping. Project-generated vehicle emissions have been estimated using CalEEMod. Trip generation rates associated with the proposed project were based on traffic data within the Traffic Impact Study (David Evans and Associates, 2016). Table 3 presents a summary of the maximum daily operational emissions estimated for the project. As shown in the table, the emissions of all pollutants would be below the SCAQMD's significant thresholds. Impacts would be less than significant.

Source: SRA, 2016.

III-c) Less Than Significant Impact. Pursuant to Federal Clean Air Act mandates, the SCAQMD has developed strategies to reduce criteria pollutant emissions as outlined in the 2012 AQMP. As such, the proposed project would comply with SCAQMD Rule 402 which requires that air pollutant emissions not be a nuisance off site. SCAQMD Rule 403 requires that fugitive dust be controlled with the best available control measures. In addition, the proposed project would comply with adopted 2012 AQMP emissions control measures. Per SCAQMD rules and mandates, as well as CEQA requirement that significant impacts be mitigated to the extent feasible, these same requirements (i.e., Rule 403 compliance and compliance with adopted 2012 AQMP emissions control measures) would be imposed on projects throughout the air basin. Compliance with SCAQMD rules and regulations would reduce the proposed project's construction-related impacts to a less than significant level. Cumulative construction impacts associated with implementation of the proposed project would be less than significant.

As previously discussed, the proposed project would not result in long-term air quality impacts because emissions would not exceed the SCAQMD-adopted operational thresholds. Adherence to the SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. The proposed project would not contribute to a cumulatively considerable net increase of any nonattainment criteria pollutant. Therefore, cumulative operational impacts associated with implementation of the proposed project would be less than significant.
III-d) **Less Than Significant Impact.** Sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of sensitive receptors are residences, schools, hospitals, and daycare centers. Sensitive receptors near the project site include residential uses south of the project site and a public school southeast of the project site, the latter is less than ¼-mile from the project site boundary. In order to identify impacts to sensitive receptors, the SCAQMD recommends addressing localized significance thresholds for construction and operations impacts (area sources only). The CO hotspot analysis following the localized significance thresholds analysis addresses localized mobile source impacts.

**Localized Significance Thresholds**

The *Air Quality Technical Report* used the SCAQMD’s *Final Localized Significance Threshold Methodology* (SCAQMD 2008) to further evaluate the potential for significant impacts associated with the construction phase of the proposed project. The Localized Significance Threshold (LST) Methodology provides a look-up table for construction, operational emissions based on the emission rate, location, and distance from receptors, and provides a methodology for air dispersion modeling to evaluate whether construction or operation could cause an exceedance of an ambient air quality standard. Because the LST look-up tables are applicable to sources that are five acres or less in size, a screening air dispersion modeling approach was used to assess the significance of localized construction impacts on receptors in the project vicinity. The LST Methodology only applies to impacts from NO₂, CO and PM₁₀ concentrations.

In accordance with the LST Methodology, an air dispersion modeling analysis was conducted to evaluate potential impacts associated with construction. Based on the LST Methodology, construction emissions were modeled with the USEPA-approved AERMOD model using SCAQMD-processed Fontana meteorological data, using urban dispersion coefficients.

As shown in **Table 4**, NOₓ, CO, PM₁₀, and PM₂.₅ construction emissions would not exceed the LSTs. Therefore, impacts from construction would be less than significant. Off-site emissions are not compared with the LSTs as, according to the SCAQMD’s guidance within the LST Methodology, the thresholds are not appropriate for projects where the majority of emissions are on-road emissions that would mainly occur off site. Only on-site emissions are considered in the LST analysis for operational emissions. Based on the analysis of on-site operational emissions, the emissions are negligible in comparison with on-road emissions. Impacts would therefore not exceed the thresholds; no significant impact would occur.

**Carbon Monoxide Hotspots**
Projects that involve increases in traffic have the potential to cause CO "hot spots" due to project-related traffic. Based on the Traffic Impact Study, traffic impacts in the study area would be mitigated to levels considered less than significant. No intersections would experience degradation to level of service (LOS) E or LOS F due to project-related traffic. Accordingly, the proposed project would not have the potential to cause CO "hot spots," and no significant impact would occur.

III-e) Less Than Significant Impact. The SCAQMD CEQA Air Quality Handbook (SCAQMD 1993) identifies certain land uses as sources of odors. These land uses include the following: agriculture, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The proposed project is a warehousing/distribution center and does not propose to include any odor-inducing uses on the site. Therefore, the project would not be a source of objectionable odors.

No significant impacts are identified or anticipated. The project would be conditioned to comply with all applicable SCAQMD requirements and County of San Bernardino regulations and conditions of approval.

Conditions of Approval

AQ – Operational Standards. The developer shall implement the following air quality measures, during operation of the approved land use: All on-site equipment and vehicles (off-road/on-road), shall comply with the following:

a) County Diesel Exhaust Control Measures [SBCC § 83.01.040 (c)]

b) Signs shall be posted requiring all vehicle drivers and equipment operators to turn off engines when not in use.

c) All engines shall not idle more than five minutes in any one-hour period on the project site. This includes all equipment and vehicles.

d) On-site electrical power connections shall be provided.

e) All transportation refrigeration units (TRU’s) shall be provided electric connections, when parked on-site.

f) The loading docks shall be posted with signs providing the telephone numbers of the building facilities manager and the California Air Resources Board to report violations.

AQ – Dust Control Plan. The developer shall prepare, submit for review and obtain approval from County Planning of both a Dust Control Plan (DCP) consistent with SCAQMD guidelines and a signed letter agreeing to include in any construction contracts/subcontracts a requirement that project contractors adhere to the requirements of the DCP. The DCP shall include the following requirements:

a) Exposed soil shall be kept continually moist to reduce fugitive dust during all grading and construction activities, through application of water sprayed a minimum of two times each day.

b) During high wind conditions (i.e., wind speeds exceeding 25 mph), areas with disturbed soil shall be watered hourly and activities on unpaved surfaces shall cease until wind speeds no longer exceed 25 mph.
c) Storage piles that are to be left in place for more than three working days shall be sprayed with a non-toxic soil binder, covered with plastic or revegetated.

d) Storm water control systems shall be installed to prevent off-site mud deposition.

e) All trucks hauling dirt away from the site shall be covered.

f) Construction vehicle tires shall be washed, prior to leaving the project site.

g) Rumble plates shall be installed at construction exits from dirt driveways.

h) Paved access driveways and streets shall be washed and swept daily when there are visible signs of dirt track-out.

i) Street sweeping shall be conducted daily when visible soil accumulations occur along site access roadways to remove dirt dropped or tracked-out by construction vehicles. Site access driveways and adjacent streets shall be washed daily, if there are visible signs of any dirt track-out at the conclusion of any workday and after street sweeping.

AQ – Construction Standards. The developer shall submit for review and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:

a) Provide documentation prior to beginning construction demonstrating that the project will comply with all SCAQMD regulations including 402, 403, 431.1, 431.2, 1113 and 1403.

b) Each contractor shall certify to the developer prior to construction-use that all equipment engines are properly maintained and have been tuned-up within last 6 months.

c) Each contractor shall minimize the use of diesel-powered vehicles and equipment through the use of electric, gasoline or CNG-powered equipment. All diesel engines shall have aqueous diesel filters and diesel particulate filters.

d) All gasoline-powered equipment shall have catalytic converters.

e) Provide onsite electrical power to encourage use of electric tools.

f) Minimize concurrent use of equipment through equipment phasing.

g) Provide traffic control during construction to reduce wait times.

h) Provide on-site food service for construction workers to reduce offsite trips.

i) Implement the County approved Dust Control Plan (DCP)

j) Suspend use of all construction equipment operations during second stage smog alerts. NOTE: For daily forecast, call (800) 367-4710 (San Bernardino and Riverside Counties).

AQ – Coating Restriction Plan. The developer shall submit for review and obtain approval from County Planning of a Coating Restriction Plan (CRP), consistent with SCAQMD guidelines and a signed letter agreeing to include in any construction contracts/subcontracts a condition that the contractors adhere to the requirements of the CRP. The CRP measures shall be following implemented to the satisfaction of County Building and Safety:
a) Architectural coatings with Reactive Organic Compounds (ROC) shall not have content greater than 100 g/l.

b) Architectural coating volume shall not exceed the significance threshold for ROG, which is 75 lbs./day and the combined daily ROC volume of architectural coatings and asphalt paving shall not exceed the significance threshold for ROC of 75 lbs. per day.

c) High-Volume, Low Pressure (HVLP) spray guns shall be used to apply coatings.

d) Precoated/natural colored building materials, water-based or low volatile organic compound (VOC) coatings shall be used, if practical.

e) Comply with SCAQMD Rule 1113 on the use or architectural coatings.
### IV. BIOLOGICAL RESOURCES – Would the project:

#### SUBSTANTIATION:

*(Check if project is located in the Biological Resources Overlay or contains habitat for any species listed in the California Natural Diversity Database ☐): Category N/A*

A Habitat Assessment and Delhi Sands Flower-Loving Fly Suitability Assessment was prepared by RBF Consulting (RBF, December 2014). The Habitat Assessment is included as Appendix B and the results are summarized herein.
a) **Less Than Significant Impact With Mitigation Incorporated.** The California Department of Fish and Wildlife (CDFW) and the U.S. Fish and Wildlife Service (USFWS) may list species as threatened or endangered under the California Endangered Species Act (CESA) or Federal Endangered Species Act (FESA), respectively. The USFWS can designate critical habitat that identifies specific areas that are essential to the conservation of a listed species.

The project site is located within the Jurupa Recovery Unit for the federally endangered Delhi Sands flower-loving fly (DSF). Although there are no Delhi Sand soils on site, Delhi Sand soils are located approximately 0.33 mile south of the site. Delhi Sands are subject to wind and can be carried to downwind locations. No Delhi Sands were found on site and all on-site habitats were classified as unsuitable for DSF. No impacts are anticipated and no mitigation is required.

The project site is heavily disturbed and consists of a bare field that was formerly used for agricultural and residential uses. No sensitive species were observed during the habitat assessment. Based on habitat requirements for specific species as well as the availability and quality of habitats needed by sensitive species, it was determined that the project site has low potential to support the burrowing owl (*Athene cunicularia*); however, a preconstruction survey is required as identified in Mitigation Measure IV-1.

The site no longer supports native vegetation, and therefore the presence of sensitive plant or wildlife species is unlikely. Some of the existing trees could provide suitable nesting habitat for native birds. Nesting birds are protected under the federal Migratory Bird Treaty Act and the California Fish and Game Code. Federal regulations prohibit any person to "pursue, hunt, take, capture, kill, attempt to take, capture, or kill, possess, offer for sale, sell, offer to barter, barter, offer to purchase, [or] purchase" any migratory bird, including parts of birds, as well as eggs and nests. The California Fish and Game Code Sections 3503, 3503.5, and 3512 also prohibit the take of birds and active nests. Implementation of Mitigation Measure IV-2, which addresses pre-construction nesting bird surveys, is required to avoid impacts to nesting birds. Impacts would be mitigated to a less than significant level.

b) **No Impact.** Based on the Habitat Assessment, there are no jurisdictional features on the site.

c) **No Impact.** As noted above, the project does not contain wetlands or jurisdictional features. Therefore, the project would not have a substantial adverse effect on federally protected wetlands.

d) **Less Than Significant Impact.** The project site is bordered by urban development including roads, a freeway, and railroad tracks. There may be occasional large mammals on site such as coyote due to the railroad tracks directly north of the site but this would not be characterized as a wildlife movement corridor. Therefore, impacts would be less than significant.

e) **No Impact.** The proposed project would not conflict with any local policies or ordinances protecting biological resources, as the site have been previously disturbed and there are no identified biological resources that are subject to such regulation.

f) **No Impact.** With the exception of the recovery unit for the federally endangered Delhi Sands flower-loving fly (DSF), the project site is not subject to a conservation plan; no plans have been adopted in the area of the project site. No Delhi Sands were found on site and all on-site habitats were classified as unsuitable for DSF.
Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant.

MM#  Mitigation Measures

IV-1  Burrowing Owl Pre-Construction Survey: A pre-construction survey for Burrowing Owl (BUOW) shall be required 30 days before the start of grading activities to confirm the absence of BUOW from the site. If the survey determines the BUOW to be present, protective measures shall be required to ensure compliance with the Migratory Bird Treaty Act (MBTA) and other applicable California Department of Fish and Game (CDFG) Code requirements and include, but are not limited to the following:

a. Occupied BUOW shall not be disturbed during nesting season (February 1-August 31) unless a qualified biologist verifies through non-invasive methods that either (1) the birds have not begun egg laying or incubation or (2) that juveniles from the occupied burrows are foraging independently and are capable of an independent survival flight.

b. All relocation shall be approved by the California Department of Fish and Wildlife (CDFW). The permitted biologist shall monitor relocated owls a minimum of three days per week of a minimum of three weeks. A report summarizing the results of the relocation and monitoring shall be submitted to the CDFW within 30 days following completion of the relocation and monitoring of the BUOW.

c. A BUOW Mitigation Monitoring Plan prepared by a qualified biologist shall be submitted to the CDFW for review and approval prior to relocation of owls. The BUOW Mitigation Monitoring Plan shall describe proposed relocation and monitoring plans. The plan shall include the number and location(s) of occupied BUOW sites and details on adjacent or nearby suitable habitat available to owls for relocation. If no suitable habitat is available nearby for relocation, details regarding the creation of artificial burrows (numbers, locations, and type of burrows) shall be included in the plan. The plan shall also describe specific procedures to compensate for impacts to BUOW/occupied burrows. Such procedures may include, but are not limited to, the purchase/conservation of off-site suitable habitat that is known to support BUOW at a minimum 1:1 ratio depending on the quality of habitat removed compared to the quality of habitat provided. Specific ratios would be determined in consultation with CDFW. Prior to the issuance of occupancy permits, the Applicant shall provide copies of applicable species mitigation agreements/permits to the County of San Bernardino.

d. If BUOW must be moved away from the disturbance area, passive relocation techniques shall be used. One or more weeks would be necessary to accomplish this relocation and allow the owls to acclimate to alternative burrows. Owls must be relocated by a qualified biologist from any occupied burrows that would be impacted by project activities. Suitable habitat is undeveloped land that can meet the BUOW's life cycle requirements (for both foraging and breeding) and is not intended for development. Suitable habitat must be adjacent or near the disturbance site or artificial burrows would need to be provided nearby. Once the biologist has confirmed that the BUOWs have left the burrow, burrows should be
excavated using hand tools and refilled to prevent reoccupation. [Mitigation Measure IV-1] Prior to Grading Permits/Planning

IV-2 Nesting Bird Survey: Pursuant to the Migratory Bird Treaty Act and the Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat should be conducted outside the avian nesting season. The nesting season generally extends from early February through August but can vary based upon seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a qualified biologist, approved by the County of San Bernardino, shall conduct a pre-construction clearance survey for nesting birds. The survey shall be conducted within three days of the start of any ground disturbing activities to ensure that no nesting birds would be disturbed during construction.

The survey shall focus on all bird species. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active bird nests would occur. If no nests are found, no further mitigation would be necessary. If a nest is found, it shall be avoided/protected with a suitable buffer area until nesting activity has ended (e.g., the young fledge). The diameter of the buffer area shall be determined by the biologist based on the species (some birds are more tolerant than others), the location of the nest relative to existing off-site and on-site disturbances and conditions, and discussions with a regulatory biologist at the California Department of Fish and Wildlife. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur. [Mitigation Measure IV-2] Prior to Grading Permits/Planning
V. CULTURAL RESOURCES – Would the project

SUBSTANTIATION (Check if the project is located in the Cultural ☐ or Paleontological [ Resources overlays or cite results of cultural resource review).

A cultural resource survey was prepared by ASM Affiliates, Inc. (ASM) (October 2015). The study included a cultural resources records search conducted by the South Central Coastal Information Center (SCCIC) at the California State University, Fullerton on September 29, 2015 and a field survey on September 30, 2015. The findings are summarized below and the study is included as Appendix C to this Initial Study.

V-a) Less than Significant with Mitigation Incorporated. The purpose of the records search conducted at the SCCIC was to determine if any reports document the presence or absence of historic and archaeological resources in the project area. The records search provides information about known resources and previous studies for the project area. The records search indicates that of the seven studies prepared for property within 0.25-mile of the project site, no studies have been conducted on the project site. Twenty-seven cultural resources have been previously recorded within the 0.25-mile record search radius. All of the cultural resources are historic; no prehistoric cultural resources have been previously recorded. No historic addresses have been previously recorded on the Directory of Properties in the Historic Property Data File for San Bernardino County within the project area or within the record search radius.

The field survey consisted of walking the project site in transects spaced at 15-meter intervals. The project site was covered by dry non-native grasses and evidence of significance disturbance including agricultural use and grading were present. The project site is undeveloped but shows evidence of having been extensively disturbed by agricultural uses and prior residential development, the removal of buildings, grading, and vegetation removal. Three concrete rubble piles are present within the project area and modern trash is also present across the site with a higher concentration along Cedar Avenue and Orange Street. One historic cultural resource (referred herein as Thrifty S-1) consisting of historic foundations and artifacts was recorded. Thrifty S-1 consists of two partially intact concrete foundations, which correspond to buildings previously removed from the site as well as six artifacts. The eastern foundation corresponds to a building identified on the historic aerial photograph as having been constructed prior to 1938. The building was removed between 2002 and 2005. The six artifacts
were identified on the surface; they are one cobalt blue glass fragment and five historic ceramic fragments. No evidence of intact subsurface deposits was identified. Historic buildings were once present but were previously removed. All but one building was removed by 1994. As fragmentary ruins, unassociated with archaeological deposits or features, Thrifty-S-1 is recommended not eligible for listing in the California Register of Historic Resources as it fails to meet the criteria for listing and therefore is not considered significant.

Because the project involves development of a previously developed site, it is not anticipated that intact subsurface historic or archaeological resources would be encountered during excavation and grading activities. However, historical and archaeological sites are known to exist in the area. Therefore, there is a potential for disturbance of undiscovered resources during grading and excavation activities. Mitigation Measure V-1 is recommended to reduce this potential impact to a level considered less than significant.

**V-b) Less than Significant with Mitigation Incorporated.** The project area is predominately urbanized; the project site has been previously disturbed. The project site is not located within the County's Cultural Resource Overlay area. No archaeological resources are known to occur on site and due to the level of past disturbance, it is not anticipated that archeological sites would be found. Because the project involves development of a previously developed site, it is not anticipated that intact subsurface archaeological resources would be encountered during excavation and grading activities. Because of the potential for disturbance of undiscovered resources during grading and excavation activities, Mitigation Measure V-1 is recommended to reduce this potential impact to a level considered less than significant.

In accordance with Assembly Bill 52 (AB 52), which added various provisions to the California Public Resources Code (PRC) that concern Tribal Cultural Resources, including Section 21080.3.1(d), the following tribes have requested to be notified of projects in the geographic area that is traditionally and culturally affiliated with each tribe.

- Gabrieleño Band of Mission Indians
- Morongo Band of Mission Indians
- San Manuel Band of Mission Indians
- Soboba Band of Luiseno Indians

Mr. Andrew Salas, Chairman of the Gabrielino Band of Mission Indians – Kizh Nation responded to the County and requested Native American monitoring by the Gabrieleño Band of Mission Indians during ground disturbing activities; see Mitigation Measure V-1.

**V-c) Less Than Significant Impact.** No paleontological resources are known to be on or adjacent to the project site. It is assumed that if these resources were located in these areas, they would have been discovered during original or subsequent ground disturbing activities in this urbanized area. Should evidence of paleontological resources be encountered during grading and construction, operations would be required to cease, and the County of San Bernardino and County Museum are required to be contacted for determination of appropriate procedures. Compliance with the County’s standard conditions would preclude significant impacts to paleontological resources.

**V-d) Less Than Significant Impact.** The project site is not located within a known or suspected cemetery and there are no known human remains within the site. In the event human remains are encountered during earth removal or disturbance activities, all activities would cease
immediately and the County Museum and Native American monitor would be immediately contacted as set forth in the conditions of approval for this project. The Coroner would be contacted pursuant to Section 7050.5 of the California Health and Safety Code relative to Native American remains. Should the Coroner determine the human remains to be Native American; the Native American Heritage Commission would be contracted pursuant to PRC Section 5097.98. The likelihood of finding human remains is low and the resulting impact is considered less than significant.

Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant.

**MM# Mitigation Measures**

**V-1 Cultural Resources Monitoring:** Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the County of San Bernardino that the Applicant has retained a qualified archaeologist and Native American monitor to observe grading activities and to salvage and catalogue historic and archaeological resources, as necessary. The selection of a qualified Gabriellino Band of Mission Indians Native American monitor shall be made by the archaeologist subject to the approval of the County. The archaeologist and Native American monitor shall be present at the pre-grade conference; the archaeologist shall establish procedures for archaeological resource surveillance; and shall establish, in cooperation with the Applicant/Contractor, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts, as appropriate. Because of the disturbed condition of the project site, the duration of monitoring by both the archaeologist and the Native American monitor shall be determined by the archaeologist. If the archaeologist, with the assistance of the Native American monitor, determines that they are unique historic or archaeological resources as defined by Public Resources Code (PRC) Section 21083.2 or a tribal cultural resource as defined by PRC Section 21074, then the archaeologist and Native American monitor shall conduct additional excavations as determined to be necessary to avoid impacts to these resources by the development. If they are not "unique" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Section 21083.2 of CEQA. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the County of San Bernardino Land Use Services Department. [Mitigation Measure V-1] Prior to Grading Permits/Planning
VI. GEOLOGY AND SOILS – Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

   i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? □ □ □ □ ☒

   ii. Strong seismic ground shaking? □ ☒ □ □ □

   iii. Seismic-related ground failure, including liquefaction? □ □ ☒ □ □

   iv. Landslides? □ □ □ □ ☒

b) Result in substantial soil erosion or the loss of topsoil? □ □ ☒ □ □

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off site landslide, lateral spreading, subsidence, liquefaction or collapse? □ □ ☒ □ □

d) Be located on expansive soil, as defined in Table 18 1-B of the California Building Code (2001) creating substantial risks to life or property? □ □ ☒ □ □

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? □ □ ☒ □ □

SUBSTANTIATION: (Check ☑ if project is located in the Geologic Hazards Overlay District):

A geotechnical investigation, Geotechnical Investigation Proposed Commercial/Industrial Building: NWC Cedar Avenue and Orange Street, was prepared by Southern California Geotechnical (October 2014). The intent of the Geotechnical Investigation was to assess on-site geotechnical conditions and provide preliminary recommendations for design, future grading, and construction. The report is provided in Appendix D.
VI-a) i) No Impact. According to the most recent Alquist-Priolo Earthquake Fault Zone Map, the project site is not located within an Alquist-Priolo Fault Zone. Therefore, the project site is not expected to be subject to rupture. No impacts are anticipated with respect to fault rupture.

ii) Less Than Significant Impact with Mitigation Incorporated. The project site, like most of Southern California, is located in a seismically active region. Active faults are defined as those that have experienced surface displacement within Holocene time (approximately the last 11,000 years) and/or are in a State-designated Alquist-Priolo Earthquake Fault Zone. There are faults capable of generating moderate to large earthquakes in the project vicinity. The nearest fault zone is the San Jacinto fault zone located approximately five miles north of the project site.

The proposed project would be required to comply with the building design standards of the 2013 California Building Code for the construction of new buildings and/or structures as well as any applicable standards for seismic forces. All project construction would be conducted according to the standard building design and engineering techniques required for compliance with the California Building Code. Although some structural damage is typically not avoidable during a large earthquake, compliance with applicable ordinances and the California Building Code in intended to protect against building collapse and major injury during a seismic event. The California Building Code includes specific design measures, which are based on determination of Site Classification and Seismic Design Categories specific to the project site. These design measures are intended to maximize structural stability in the event of an earthquake. Further, the Geotechnical Investigation has included specific recommendations (Mitigation Measure 3) to reduce the risk of structural damage as a result of strong seismic shaking. Therefore, adherence to the California Building Code requirements, as well implementation of the Mitigation Measure 3, would reduce the risks related to strong seismic shaking to a less than significant level.

iii) Less Than Significant Impact. Liquefaction is the loss of soil strength or stiffness due to a buildup of water pressure between soil particles during severe ground shaking. This condition is associated primarily with loose (low density), saturated, fine- to medium-grained, cohesionless soils that often make up alluvial materials. Liquefaction can cause ground and structure settlement, flotation of buoyant structures, and cracking of the ground surface. The general liquefaction susceptibility of the site was determined by research of the San Bernardino County Official Land Use Plan, General Plan, Geological Overlay. The map for the Fontana Quadrangle indicates that the project site is not located within a liquefaction hazard zone. The potential for impacts from liquefaction are considered less than significant. Additionally, adherence to the California Building Code would further reduce any potential impacts of seismic-related ground failure, including liquefaction to less than significant levels.

iv) No Impact. The project site is relatively flat with slopes of less than two percent. The site ranges in elevation from northeast to southwest from approximately 1,090 feet above msl to approximately 1,077 feet above msl. The topography of surrounding properties is similar with no unusual geographic features. Therefore, project implementation would not expose people or structures to potential substantial adverse effects involving landslides, and no impacts would occur.

The project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving: (i) rupture of a known earthquake fault, (ii) strong seismic ground shaking, (iii) Seismic-related ground failure, including liquefaction or (iv) landslides, because there are no such geologic hazards identified in the immediate vicinity of
the project site. The project would be reviewed and approved by County Building and Safety with appropriate seismic standards.

VI-b) **Less Than Significant Impact.** The primary concern in regards to soil erosion or loss of topsoil would be during the construction phase of the project. Grading and earthwork activities associated with proposed project construction activities would expose soils to potential short-term erosion by wind and water.

The proposed project would be subject to compliance with the requirements set forth in the National Pollutant Discharge Elimination System (NPDES) Storm Water General Construction Permit for construction activities. The NPDES Storm Water Construction Permit requires preparation of a Storm Water Pollution Prevention Plan, which would identify specific erosion and sediment control Best Management Practices (BMPs) that would be implemented to protect storm water runoff during construction activities. Compliance with the California Building Code and NPDES permit conditions would minimize effects from erosion and ensure consistency with the Regional Water Quality Control Board Water Quality Control Plan. Following compliance with NPDES requirements, project implementation would result in less than significant impacts regarding soil erosion.

Substantial soil erosion or loss of topsoil is not expected to occur during long-term operation. The majority of the project site would be covered with structures or paved, and the remaining pervious areas would be landscaped, which would minimize impacts to a less than significant level.

VI-c) **Less Than Significant Impact.** The proposed project is not identified as being located on a geologic unit or soil that has been identified as being unstable or having the potential to result on-site or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. As discussed above, the *Geotechnical Investigation* found that impacts due to liquefaction to be less than significant and there would be no impacts from landslides because the site is flat. Additionally, the *Geotechnical Investigation* found that the impacts of lateral spreading and subsidence to be less than significant. The report includes grading recommendations related to unstable soils.

VI-d) **Less Than Significant Impact.** Expansive soils can be a problem, as variation in moisture content would cause a volume change in the soil. Expansive soils heave when moisture is introduced and contract as they dry. According to the *Geotechnical Investigation*, the project site is underlain by soils with very low expansion potential. Therefore, no design considerations related to expansive soils are required. Impacts are less than significant.

VI-e) **Less Than Significant Impact.** The project would be served by either an on-site septic system or a connection to the City of Rialto sewer system. A sewer connection is available from the City of Rialto but is not required to serve the project. Alternatively, a septic system would be implemented. An on-site wastewater treatment system may be allowed with the submittal of a soil percolation report to the Department of Environmental Health Services (DEHS) for review and approval. A plot plan showing the location of the septic system may be required by DEHS prior to the issuance of building permits. If the percolation report cannot be approved, the project may require an alternative on-site wastewater treatment system.
Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant.

VII. GREENHOUSE GAS EMISSIONS – Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. ☐ ☐ ☒ ☐

b) Conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing the emissions of greenhouse gases. ☐ ☐ ☒ ☐

SUBSTANTIATION:

An Air Quality Technical Report was prepared for the proposed project by Scientific Resources Associated (SRA, July 2016). The report includes the assessment of greenhouse gas emissions (Appendix A).

VII-a) Less than Significant Impact. The County’s Greenhouse Gas Emissions Reduction Plan (GHG Plan) was adopted on December 6, 2011 and became effective on January 6, 2012. The GHG Plan establishes a GHG emissions reduction target for the year 2020 that is 15 percent below 2007 emissions. The plan is consistent with AB 32 and sets the County on a path to achieve more substantial long-term reductions in the post-2020 period. Achieving this level of emissions would ensure that the contribution to greenhouse gas emissions from activities covered by the GHG Plan would not be cumulatively considerable.

In 2007, the California State Legislature adopted Senate Bill 97 (SB 97) requiring that the CEQA Guidelines be amended to include provisions addressing the effects and mitigation of GHG emissions. New CEQA Guidelines have been adopted that require: inclusion of a GHG analyses in CEQA documents; quantification of GHG emissions; a determination of significance for GHG emissions; and, adoption of feasible mitigation to address significant impacts. The CEQA Guidelines [Cal. Code of Regulations § 15083.5 (b)] also provide that the environmental analysis of specific projects may be tiered from a programmatic GHG plan that substantially lessens the cumulative effect of GHG emissions. If a public agency adopts such a programmatic GHG Plan, the environmental review of subsequent projects may be streamlined. A project’s incremental contribution of GHG emissions would not be considered cumulatively significant if the project is consistent with the adopted GHG plan.

Implementation of the County’s GHG Plan is achieved through the Development Review Process by applying appropriate reduction requirements to projects which reduce GHG emissions. All new development is required to quantify the project’s GHG emissions and adopt feasible mitigation to reduce project emissions below a level of significance. A review standard of 3,000 metric tons of carbon dioxide equivalent (MTCO2e) per year is used to identify and mitigate project emissions. Based on a CalEEMod statistical analysis, warehouse projects that exceed approximately 53,000 square feet typically generate more than 3,000 MTCO2e. For projects exceeding 3,000 MTCO2e per year of GHG emissions, the developer may use the GHG Plan Screening Tables as a tool to assist with calculating GHG reduction measures and the determination of a significance finding. Projects that garner 100 or more points in the Screening Tables do not require quantification of
project-specific GHG emissions. The point system was devised to ensure project compliance with the reduction measures in the GHG Plan such that the GHG emissions from new development, when considered together with those from existing development, would allow the County to meet its 2020 target and support longer-term reductions in GHG emissions beyond 2020. Consistent with the CEQA Guidelines, such projects are consistent with the Plan and therefore would be determined to have a less than significant individual and cumulative impact for GHG emissions.

The proposed project has garnered 102 points on the Screening Tables through the application of Energy Efficient Reduction measures, Renewable Fuel/Low Emissions Vehicles Measures, Construction Debris Diversion Measures, and Per Capita Water Use Reductions, and as a result, the project is considered to be consistent with the GHG Plan and is therefore determined to have a less than significant individual and cumulative impact for GHG emissions. The GHG reduction measures proposed by the developer through the Screening Tables Review Process have been included in the project design or would be included as Conditions of Approval for the project.

VII-b) **Less than Significant Impact.** The proposed project is not anticipated to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. In January 2012, the County of San Bernardino adopted a Greenhouse Gas Emissions Reduction Plan (GHG Plan). The proposed project is consistent with the GHG Plan with the inclusion in that more than 100 points were garnered through the Screening Table Analysis as described in Section a) above.

No significant adverse impacts are identified and no mitigation measures are required. The project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.
VIII. HAZARDS AND HAZARDOUS MATERIALS

Would the project:

a) Create a significant hazard to the public or the Environment through the routine transport, use, or disposal of hazardous materials?

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

d) Be located on a site, which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

SUBSTANTIATION:
A Phase I Environmental Assessment Report, Subject Property Located at APN 0253-211-56-0000 (9.82 Acres) and APN 0253-171-16-0000 (19.14 Acres) Orange Street and Cedar Avenue Bloomington, CA 92316 (Phase I ESA) was prepared by Waterstone Environmental, Inc. (October 2014) for the project site. The findings of the Phase I ESA are summarized in the Initial Study; the report is included as Appendix E.

VIII-a) **Less Than Significant Impact.** The project is proposed as a warehouse distribution center and is not expected to transport, use, or dispose of significant amounts of hazardous materials. If such uses are proposed on the site in the future, they would be subject to permit and inspection by the Hazardous Materials Division of the County Fire Department; subsequent land use review by the County may be required. Therefore, impacts would be less than significant.

VIII-b) **Less Than Significant with Mitigation Incorporated.** As noted in the response to VIII-a), the use or disposal of hazardous materials is not planned as a part of the project. The project site was previously used for agriculture and developed with residential uses until the 1980s. The project site has been vacant since at least 1990. Stained soil was observed near the southwest portion of the property. A small amount of an oily substance was dumped directly onto the surface soil which is characterized as a recognized environmental condition (REC). The San Bernardino County Fire Department has no records for the site with the exception of a hazardous material incident and/or complaint response activity which notes "Abandoned Waste Oil on 2/23/2007 and Three 20 Gallon Drums of Motor Oil on 9/13/1991". It is possible that that the oil-stained surface soil identified by Waterstone is related to the County's recorded incident.

Compliance with Mitigation Measure 5 regarding an environmental soil investigation would reduce potential impacts to a less than significant level. Additionally, any proposed use or construction activity that might use hazardous materials is subject to permit and inspection by the Hazardous Materials Division of the County Fire Department.

Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and federal law.

VIII-c) **Less Than Significant with Mitigation Incorporated.** The project site is located approximately 0.15 mile northwest of Slover Mountain High (Continuation) School and Bloomington Head Start program, both located at 18829 Orange Street. Warehouse distribution operations would not be expected to emit or handle hazardous or acutely hazardous materials. As indicated in the Phase I ESA, there was stained soil observed near the southwest portion of the property. A small amount of an oily substance was dumped directly onto the surface of the property. Mitigation Measure 5 requires that a Certified Environmental or Engineering Professional conduct an environmental soil investigation at the site. A Phase II Soil Investigation Report would be prepared to document the findings of the investigation. With implementation of Mitigation Measure 5, impacts would be reduced to a less than significant level.

VIII-d) **No Impact.** The project site is not included in any list of hazardous materials sites compiled pursuant to Government Code Section 65862.53. No impact would occur.

---

VIII-e) **No Impact.** The project site is not located within an airport land use plan or within two miles of an airport. The nearest public-use airport is San Bernardino International Airport, approximately 11 miles east of the project site. No impacts would occur.

VIII-f) **No Impact.** The project site is not within the vicinity of a private airstrip or related facilities. Therefore, no impacts would occur.

VIII-g) **No impact.** The proposed project would not affect any emergency response or evacuation plans. Emergency vehicles would continue to have access to project-related and surrounding roadways upon completion of the proposed project. The *Bloomington Community Plan* designates I-10 as an Emergency Evacuation Route. The proposed project would not physically interfere with the County’s emergency evacuation routes. Additionally, the project would have adequate access from two or more directions from Orange Street, Linden Avenue, and Vine Street. Impacts would be less than significant.

VIII-h) **No Impact.** The project area is predominately built out and no wildlands occur within or adjacent to the project site. Project implementation would introduce additional ornamental landscaping, which is not anticipated to create hazardous fire conditions. No impacts would occur.

Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant.

**MM# Mitigation Measures**

**VIII-1 Soil Investigation:** Prior to the issuance of the first County-issued permit that would allow for site disturbance, a Certified Environmental or Engineering Professional shall conduct an environmental soil investigation at the site as specified in the Phase I Environmental Site Assessment. The Phase II Soil Investigation Report shall be submitted to and approved by San Bernardino County Fire Hazardous Materials Division. Should remediation be required, the clean-up criteria shall be established by the Hazardous Materials Division. [Mitigation Measure VIII-1] Prior to Grading Permits/Planning

**SUBSTANTIATION:**

A *Water Quality Management Plan for Bloomington Industrial Bldg. 1 (WQMP)* was prepared by David Evans and Associates (October 2016); refer to Appendix F.

**IX-a) Less Than Significant Impact.** The service purveyor for potable water is the West Valley Water District (Water District). Sewer service would either be provided from an on-site septic system or through a connection to the City of Rialto sewer system. The project is subject to independent regulations by local and State water agencies that ensure compliance with both water quality and waste discharge requirements.

Short-term impacts related to water quality would occur during the earthwork and construction phase, when the potential for erosion, siltation, and sedimentation would be the greatest. The proposed project would disturb approximately 18.8 acres. The proposed project would be required to comply with all Regional Water Quality Control Board (RWQCB) water quality standards and waste discharge requirements. The WQMP (David Evans and Associates, 2016) identifies NPDES Construction General Permit requirements and addresses the quality and quantity of storm water runoff generated on site with the incorporation of temporary construction Best Management Practice (BMPs) and permanent treatment BMPs. To obtain coverage under the NPDES Permit, the Applicant is required to submit a Notice of Intent prior to construction activities and prepare a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP lists the BMPs the discharger would use to protect storm water runoff and the placement of those BMPs. Compliance with the requirements outlined in the WQMP would avoid or minimize any violations of water quality standards or waste discharge requirements. Implementation of the proposed project would have a less than significant impact to water quality.

After construction, the majority of runoff would surface flow into various on-site catch basins into a private on-site storm drain system. The project site includes two detention/infiltration basins: one basin (Basin A) near the northeast corner of the property adjacent to Cedar Place, and one basin (Basin B) at the southeast corner of the property adjacent to the corner of Orange Avenue at Cedar Avenue. Any overflow from Basin A would flow into Basin B. Any additional overflow from both basins would flow into a concrete spillway that outlets to Orange Avenue, and ultimately conveyed to the existing off-site municipal storm drain.

**IX-b) Less Than Significant Impact.** The project would change the majority of the site from pervious to impervious surfaces due to paving and building construction. The project would have two detention/ infiltration basins to capture the excess runoff created by the additional on-site impervious surfaces; the basins would minimize any potential impacts the project could have on local groundwater recharge. Impacts would be less than significant.

The project site is located within the service area of the West Valley Water District. The Water District uses groundwater for approximately 65 percent of its water supply. Groundwater is extracted from groundwater production wells from five regional groundwater basins. All five basins have been adjudicated and are managed. The Water District anticipates that there is sufficient capacity in the existing water system to serve the anticipated growth within its service area without substantially depleting groundwater supplies. Increased water demand at the
project site would not contribute to over pumping of groundwater basins, and therefore impacts would be less than significant.

IX-c) **Less Than Significant Impact.** The proposed project would not substantially alter the existing drainage patterns of the site or vicinity. The site is relatively flat and slopes slightly from north to south. After construction, the project site would continue to drain across the site and enter one of the two on-site detention/infiltration basins. The site does not have include any streams or rivers. In addition, the proposed on-site detention/infiltration basin would limit the release of storm water from the site; therefore, minimizing the potential for flooding to occur on site or off site. Therefore, impacts would be less than significant with mitigation incorporated.

IX-d) **Less Than Significant Impact.** There are no natural drainages (i.e., streams or rivers) on site; existing drainage patterns have been determined by past development on site and in the surrounding area. The proposed project would use a drainage collection system that would collect the storm water runoff in two detention/infiltration basins, one located in the northeastern portion of the site, the other located in the southeastern portion of the site. The drainage basins have been designed and sized to accept storm water flows generated by improvements on the project site. For overflow, a large flow through planter is used to treat storm water before it enters the storm drain system providing a reduction in peak runoff. By collecting the incremental increase in storm water runoff caused by the increase in impervious surface as well as disconnected pervious surfaces, the project would minimize the amount of off-site flows and allow downstream facilities to accept the remaining discharge.

Flows into the basins would be retained and storm water would percolate into the groundwater basin. Therefore, the drainage design of the project would ensure that no significant on-site and off-site impacts would occur. County Public Works has reviewed the proposed project drainage and all necessary drainage improvements on-site and off-site are required as conditions of construction of the project. Therefore, impacts would be less than significant.

IX-e) **Less Than Significant Impact.** The project would not create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff. The County Public Works has reviewed the project's proposed drainage plans and has determined that the proposed systems are adequate to handle anticipated flows. All necessary drainage improvements both on-site and off-site would be required as conditions of the construction of the project. There would be adequate capacity in the local and regional drainage systems so that downstream properties are not negatively impacted by any increases or changes in volume, velocity or direction of storm water flows originating from or altered by the project.

IX-f) **Less Than Significant Impact.** The proposed project would not otherwise substantially degrade water quality because appropriate measures relating to water quality protection, including erosion control measures have been required. The WQMP describes the project's compliance with the requirements of the San Bernardino County's NPDES Stormwater Program. Impacts are less than significant.

IX-g) **No Impact.** The project would not place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. No housing is proposed and the project site is not within identified FEMA
designated flood hazard areas as shown on the San Bernardino County Land Use Plan General Plan Hazard Overlays Map (Map FH29B).

IX-h) **No Impact.** The project would not place structures within a 100-year flood hazard area. The project site is not within an identified FEMA designated flood hazard area, as shown on the San Bernardino County Land Use Plan General Plan Hazard Overlays Map (Map FH29B).

IX-i) **No Impact.** According to the San Bernardino County Land Use Plan General Plan Hazard Overlays Map (Map FH29B), the project site and surrounding area is not located within a designated dam inundation area. The project would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, and no levee or dam are located in the vicinity of the project.

IX-j) **No Impact.** The project site is not located proximate to any enclosed or semi-enclosed bodies of water. Further, the project site is not located near the Pacific Ocean, and therefore would not be subject to tsunami impacts. The project site and surrounding area are relatively flat and the project site is not positioned downslope from an area of potential mudflow. No impacts would occur.

**No significant adverse impacts are identified and no mitigation measures are required. The project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.**
X. LAND USE AND PLANNING – Would the project:

a) Physically divide an established community?

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less than Significant with Mitigation Incorporated</th>
<th>Less than Significant</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>√</td>
</tr>
</tbody>
</table>

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less than Significant with Mitigation Incorporated</th>
<th>Less than Significant</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐</td>
<td>☐</td>

</tr>
</tbody>
</table>

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less than Significant with Mitigation Incorporated</th>
<th>Less than Significant</th>
<th>No Impact</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐</td>
<td>☐</td>
<td>☐</td>
<td>√</td>
</tr>
</tbody>
</table>

SUBSTANTIATION:

X-a) No Impact. The project site is vacant and the area is developed with warehouse, industrial, residential, and institutional uses with a vacant parcel east of the site and Cedar Avenue. The project site has a General Plan land use zoning designation of “Community Industrial” (IC). The Community Industrial designation is designed to accommodate industrial, distribution, and manufacturing uses. Due to the site’s proximity to I-10 and other existing and permitted warehouse uses, development of the project site with a high-cube warehouse would not interfere with or divide an established community; there would be no encroachment into adjacent residential areas located south of Orange Street.

X-b) No Impact. The project is consistent with applicable land use policies and regulations of the County Code and General Plan. The proposed project requires a Conditional Use Permit. Per the County of San Bernardino Development Code, Section 85.06.050, projects greater than 80,000 sf in Community Industrial (IC) land use zoning districts must be processed through a Conditional Use Permit. The project complies with all hazard protection, resource preservation and land use modifying Overlay District regulations.

X-c) No Impact With the exception of the recovery unit for the federally endangered Delhi Sands flower-loving fly (DSF), the project site is not subject to a conservation plan; no plans have been adopted in the area of the project site. No Delhi Sands were found on site and all on-site habitats were classified as unsuitable for DSF.

No significant adverse impacts are identified or anticipated and no mitigation measures are required.
XI. MINERAL RESOURCES – Would the project:

<table>
<thead>
<tr>

<td>b)</td>
<td>Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?</td>
<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

SUBSTANTIATION:

XI-a) **No Impact.** No known mineral resources occur in the project area and no known mineral recovery activities have occurred on the project site. The proposed project is a high-cube warehouse and would not involve mineral recovery. No impacts would occur.

XI-b) **No Impact.** The project site is zoned Community Industrial (IC) and is not located within a Mineral Resource Overlay (MR) area. No impacts would occur.

No significant adverse impacts are identified or anticipated and no mitigation measures are required.
XII. NOISE – Would the project result in:

<table>
<thead>

</tbody>
</table>

SUBSTANTIATION:

dBF Associates, Inc. prepared a *Noise and Vibration Impact Assessment Technical Report: Cedar and Orange Business Center Bloomington, CA (Noise Assessment)* (March 2015). The *Noise Assessment* can be found in Appendix G.

The Community Noise Equivalent Level (CNEL) is an adjusted average A-weighted sound level for a 24-hour day. It is calculated by adding a 5-dB adjustment to sound levels during evening hours (7:00 PM to 10:00 PM) and a 10-dB adjustment to sound levels during nighttime hours (10:00 PM to 7:00 AM). These adjustments compensate for the increased sensitivity to noise during the typically quieter evening and nighttime hours. The CNEL is used by the State of California and San Bernardino County (County) to evaluate land use compatibility with regard to noise.

An ambient noise level survey was conducted on December 23, 2014 to estimate the existing noise environment near noise-sensitive areas within the project area. Sound measurement locations were selected near single-family residential land uses and/or project boundaries.
Three attended short-term (20-minute) measurements were conducted during the daytime period (7:00 AM – 7:00 PM).

XII-a) Less Than Significant with Mitigation Incorporated. Sections 83.01.080 and 83.01.090 of the San Bernardino County Development Code (Development Code) govern noise and vibration, respectively, within unincorporated areas of San Bernardino County. San Bernardino County does not define thresholds of significance for traffic noise increases when existing traffic noise levels currently exceed the standard. Sound level variations of up to 3 dBA are not detectable by the typical human ear. Therefore, when existing traffic noise levels exceed the standard, an increase of 3 dBA CNEL directly attributable to the project is considered significant.

The Noise Ordinance for San Bernardino County, Section 83.01.080 states:

*The project will not expose persons to or generate noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, because the project has been conditioned to comply with the noise standards of the County Development Code and no noise exceeding these standards is anticipated to be generated by the proposed uses.*

**Short-Term Noise Impacts**

Construction of the proposed project would occur over approximately eight months. Construction would require the following phases: site development (fine grading, trenching, and paving), building construction, architectural coatings application, and paving associated with buildings. Fine grading is expected to produce the highest construction noise and vibration levels. Grading is estimated to require two to three motor graders, two to three dozers, one excavator, three scrapers, and one water truck. Project construction would result in a temporary increase in noise levels in the project vicinity. Construction noise varies depending on the construction process, type of equipment involved, location of the construction site with respect to sensitive receptors, the schedule proposed to carry out each task (e.g., hours and days of the week), and the duration of the construction work.

Project construction would occur only during the hours and days allowed in compliance with County Development Code Section 83.01.080. Construction activities may result in short-term impacts to the noise environment including groundborne vibration and noise. Potential noise impacts would be of a short term duration during construction and would end once the project is operational. At buildout, the project is not expected to generate groundborne vibration or noise that is excessive. Short-term impacts associated with construction would be limited to the greatest extent practicable with the implementation of the mitigation measures outlined below.

**Long-Term Noise Impacts**

An industrial noise prediction model was used to estimate noise levels from noise sources on the project site, which are expected to include tractor-trailers and passenger vehicles and rooftop mechanical equipment; exterior trash compactors were not assumed. The project is expected to include one exterior emergency generator; the generator is expected to be ground-mounted at the west end of the south trailer parking yard. Rooftop mechanical equipment was treated as stationary point sources and was assumed to be constantly operational.

On-site operational noise levels at various points along off-site property lines would range from approximately 39 dBA Leq at the northwest property line corner to approximately 56 dBA Leq
at the north property line. Properties to the south and southeast of the project site are developed as single-family residences and public school facilities. The project’s operational noise levels at the south off-site property lines would be as high as 53 dBA Leq between 7:00 AM and 10:00 PM, and 44 dBA Leq between 10:00 PM and 7:00 AM. Operational noise levels at the south off-site residential property lines would not exceed the San Bernardino County unmitigated property line noise limits of 55 dBA Leq between 7:00 AM and 10:00 PM, and 45 dBA Leq between 10:00 PM and 7:00 AM. The project’s operational noise level at the off-site school southern property lines would not exceed the San Bernardino County unmitigated property line noise limits of 55 dBA Leq at any time.

Adjacent properties to the north, east, and west of the project site are commercial/industrial land uses. Operational noise levels at the north, east, and west off-site property lines would be as high as 56 dBA Leq. Operational noise levels at the north, east and west off-site property lines not exceed 60 dBA Leq at any time. Therefore, the project’s operational noise level at the commercial off-site property lines would not exceed the San Bernardino County unmitigated property line noise limits of 60 dBA Leq at any time. Additionally, the project’s operational noise level at the industrial off-site property lines would not exceed the San Bernardino County unmitigated property line noise limits of 70 dBA Leq at any time.

XII-b) **Less Than Significant Impact.** Vibration is defined as any oscillatory motion induced in a structure or mechanical device as a direct result of some type of input excitation. Input excitation, generally in the form of an applied force or displacement, is the mechanism required to start some type of vibratory response. Sources of earth-borne vibrations include natural phenomena (earthquakes, sea waves, landslides, etc.) or manmade (explosions, machinery, traffic, construction equipment, etc.).

**Short-Term Construction**

Because construction is a temporary activity and would occur during the hours and days allowed by San Bernardino County, vibration generated by construction is exempt from regulation per County Development Code 83.01.090(C)(2). Typical vibration levels associated with construction equipment are presented in **Table 5**. In addition, project construction would not require pile driving.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Scraper</td>
<td>0.11 in/sec</td>
</tr>
<tr>
<td>Front-End Loader</td>
<td>0.089 in/sec</td>
</tr>
</tbody>
</table>

**Long-Term Operations**
Vibration associated with project operations would be generated by vehicular traffic and mechanical equipment. Vehicles traveling on a smooth pavement surface are rarely, if ever, the source of perceptible ground vibration. All vehicles on the project site would have rubber tires and suspension systems that isolate vibration from the ground, and would generally travel at a maximum speed of approximately 10 miles per hour. All vehicular traffic would operate over 25 feet from vibration-sensitive land uses. Vibration is expected to be negligible.

All mechanical equipment would be located over 100 feet from vibration-sensitive land uses. Groundborne vibration levels resulting from mechanical equipment are dependent of the design of the equipment. All ground-mounted mechanical equipment would be installed using vibration-dampening resilient isolators designed to ensure that vibration levels would be lower than 0.2 in/sec PPV at project property lines adjacent to vibration-sensitive land uses. No significant operational vibration impacts would be expected.

XII-c) Less Than Significant Impact. Noise levels associated with the proposed project would increase over existing noise levels. However, as discussed under Threshold A above, operation of the project would not exceed noise levels established by the County. Table 6 identifies traffic noise levels without the project compared to noise levels with the project.

Note: All noise levels are reported at 50 feet from centerline of roadways

Existing traffic noise levels along most traffic study area roadway segments currently exceed the standard. Project-generated traffic would increase noise levels along these roads by up to 1 dBA. All project-generated traffic noise increases would be lower than the applicable thresholds of significance. The impact is less than significant.

**XII-d)** Less Than Significant with Mitigation Incorporated. Construction activities may result in short-term impacts to the noise environment including groundborne vibration and noise. Potential impacts to noise would be short term during construction and would end once the project is operational. At buildout, the project is not expected to generate groundborne vibration or noise that is excessive. Short-term impacts associated with construction would be limited to the greatest extent practicable with the implementation of the mitigation measures outlined below.

**XII-e)** Less Than Significant Impact. The largest closest operational airports to the project site are the San Bernardino International Airport to the east and the LA/Ontario International Airport to the west. The project site is located outside the 60 dBA CNEL noise contours of both airports. No airport-related noise sources affect the project site or surrounding properties.

**XII-f)** No Impact. The project is not within the vicinity of a private airstrip.

Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant.

**MM# Mitigation Measures**

**XII-1 Construction Noise:** The "developer" shall submit and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce noise impacts during construction, which shall include the following vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:
a) During the project site excavation and grading, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with the manufactures standards.

b) The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site.

c) The construction contractor shall limit all construction-related activities that would result in high noise levels between the hours of 7:00 a.m. and 6:00 p.m., Monday through Saturday excluding holidays.

d) The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise sensitive receptors nearest the project site during all project construction.

e) The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment. To the extent feasible, haul routes shall not pass sensitive land uses or residential dwellings. [Mitigation Measure XII-1] - Prior to Grading Permit/Planning
XIII. POPULATION AND HOUSING - Would the project:

<table>
<thead>

<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

SUBSTANTIATION:

XIII-a) **Less Than Significant Impact.** The proposed project is a high-cube warehouse located adjacent to existing roads and a freeway. The project is consistent with the growth projections in the Bloomington Community Plan. The tenant(s) of the warehouse distribution facility has not been identified; therefore, the precise number of employees cannot be determined at this time. For the purpose of this analysis, the estimated number of employees is 100. Employees would be full-time and/or part-time depending on the tenant. Unemployment is currently 5.6 percent in the Riverside-San Bernardino-Ontario Metropolitan Statistical Area (Riverside and San Bernardino Counties); within the Bloomington community area, the unemployment rate is 7.1 percent. It is possible that the new jobs would be absorbed by the employment needs of the community and County4. In conclusion, implementation of the proposed project would not directly or indirectly induce substantial population growth. Impacts would be less than significant.

XIII-b) **No Impact.** There are no residences on the project site. Therefore, no impacts would occur.

XIII-c) **No Impact.** The proposed project would not displace any land uses or persons from the property. Therefore, no impacts would occur.

No significant adverse impacts are identified or anticipated and no mitigation measures are required.

---

### SUBSTANTIATION:

**XIV-a) Less Than Significant Impact.**

**Fire Protection**

The San Bernardino County Fire Department provides fire protection and emergency services to the project area. Development of the proposed project would place an additional demand on existing fire services. Consistent with standard County requirements, to offset the increased demand for fire protection services, the proposed project would be conditioned to provide fire safety and fire suppression, including compliance with State and local fire codes, fire sprinklers, fire hydrant system, paved access, and secondary access routes.

**Police Protection**

The San Bernardino County Sheriff’s Department provides police and emergency services to the project area. The proposed project’s demand on police protection services is not expected to be significant because of the nature of the land use and limited number of employees. The project would not create the need to construct a new police station or physically alter an existing station.

**Schools**

The project is located within the Colton Joint Unified School District. The School District requires the payment of school fees for various land uses including commercial/industrial development. The applicable rate is $0.54 per square foot of commercial/industrial. Pursuant to the Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50), the payment of school impact fees constitutes complete mitigation of any project-related impacts to schools services.
Therefore, the payment of school impact fees would reduce the project’s impacts to school facilities to a less than significant level.

**Parks**

The proposed project is a high-cube warehouse and does not include a residential component that would generate population growth beyond what has been anticipated; therefore it would not create an increased demand for or need for the construction of park facilities. Additionally, impacts to existing neighborhood and regional parks or other recreational facilities generated by employees of the project would be minimal. Therefore, impacts would be less than significant.

**Other Public Facilities**

Implementation of the project would not result in a direct increase in the population in the project area and would not substantially increase the demand for public services, including public health services and library services because of the nature of the proposed land use.

No significant adverse impacts are identified and no mitigation measures are required. The project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.
XV. RECREATION

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>

</tr>
<tr>
<td>☐</td>
<td>☐</td>
<td>☑</td>
<td>☐</td>
</tr>
</tbody>
</table>

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

SUBSTANTIATION:

XV-a) **Less Than Significant Impact.** As previously addressed, the proposed project does not include a residential component and would not generate population growth beyond what has been anticipated for the community of Bloomington and would therefore not create an increased demand for recreational facilities. Additionally, impacts to existing neighborhood and regional parks or other recreational facilities generated by employees of the project would be minimal. Therefore, impacts would be less than significant.

XV-b) **Less Than Significant impact.** The proposed project does not include, nor does it require the construction of expansion of recreational facilities because the high-cube warehouse uses of the project would not result in a direct increased demand for recreational facilities. Therefore, impacts would be less than significant.

No significant adverse impacts are identified or anticipated and no mitigation measures are required.

**SUBSTANTIATION:**

The Traffic Impact Study, Bloomington High-Cube Warehouses/Distribution Center, Bloomington, CA (Traffic Impact Study) was prepared by David Evans and Associates (2016) to evaluate potential traffic impacts. The Traffic Impact Study is summarized below and is included in Appendix H to this Initial Study. The analysis evaluated traffic conditions for the following scenarios:

- Existing Conditions
- Year 2016 Ambient Condition
- Year 2016 Ambient Plus Project Condition
- Year 2016 Cumulative Condition
- Year 2035 Ambient Condition
- Year 2035 Ambient Plus Project Condition

Traffic Study Area

The following traffic study area intersections are evaluated:

1. Cedar Avenue at Valley Boulevard
2. Cedar Avenue at I-10 Westbound Ramps
3. Cedar Avenue at I-10 Eastbound Ramps
4. Cedar Avenue at Cedar Place
5. Cedar Avenue at Orange Street
6. Cedar Avenue at Slover Avenue
7. Project Driveway at Orange Street (future intersection)
8. Linden Avenue at Slover Avenue

The intersections of Cedar Avenue at Valley Boulevard, Cedar Avenue at the I-10 westbound ramps, Cedar Avenue at the I-10 eastbound ramps, Cedar Avenue at Orange Avenue, and Cedar Avenue at Slover Avenue are signalized. The intersections of Cedar Avenue at Cedar Place, the project driveway at Orange Street, and Linden Avenue at Slover Avenue are stop controlled.

Levels of Service

The San Bernardino County Traffic Impact Study (TIS) Guidelines require that an intersection analysis be performed to identify the level of service (LOS) and delay. For signalized intersections, using the Traffic Impact Study Guidelines, Table 7 provides the HCM 2010 level of service thresholds for signalized intersections.

<table>
<thead>
<tr>
<th>LOS</th>
<th>Control Delay per Vehicle</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>\leq 10</td>
</tr>
<tr>
<td>B</td>
<td>&gt; 10 and \leq 20</td>
</tr>
<tr>
<td>C</td>
<td>&gt; 20 and \leq 35</td>
</tr>
<tr>
<td>D</td>
<td>&gt; 35 and \leq 55</td>
</tr>
<tr>
<td>E</td>
<td>&gt; 55 and \leq 80</td>
</tr>
<tr>
<td>F</td>
<td>&gt; 80</td>
</tr>
</tbody>
</table>

For unsignalized intersections, the two-way stop-controlled (TWSC) intersection analysis level of service is computed for each movement and the most critical level of service is the one that describes the effectiveness of that intersection. The all-way stop-controlled intersection analysis level of service is defined by the control delay of the whole intersection. Table 8 provides the HCM 2010 levels of service criteria.
Table 8: Level of Service Criteria for Unsignalized intersections

Thresholds of Significance

Current Significant Impact Threshold Guidelines

The County’s Significant Impact Thresholds are provided in the San Bernardino County Road Planning and Design Standards Section 10 Traffic Studies. Section 10.12: Recommendations states “In the event that an analysis indicates unsatisfactory Levels of Service on study area streets, a description of proposed improvements that return intersections to Level of Service ‘C’ shall be included except at locations where the County has already identified a project.” The Section 10.12 Part D Significant Impact identifies the total project peak hour trip threshold by existing level of service value is shown in Table 9.

Table 9: Intersection Significance Criteria

<td>15</td>
</tr>
</tbody>
</table>

Interim Significant Impact Threshold Guidelines

The County also has interim threshold guidelines provided in the San Bernardino County Interim Traffic Impact Study Guidelines (April 9, 2014), Section 10.8 Determination of Impacts. The 2014 guidelines are in draft form and have not been adopted by the County but are used by the County as guidance. The interim guideline identifies the acceptable level of service for all study intersections is LOS D. Any study intersection that is operating at LOS E or LOS F is to be mitigated when project traffic increases the overall level of delay established prior to the addition of project traffic. In the event of a conflict between Chapter 10 (Current Significant Impact Threshold Guidelines), as currently adopted, and the proposed guidelines (Interim
Significant Impact Threshold Guidelines), the adopted version of Chapter 10 shall take precedence.

Planned Improvements in the Traffic Study Area

The California Department of Transportation (Caltrans) District 8 in cooperation with the San Bernardino Associated Governments (SANBAG) is proposing to improvement I-10 by constructing freeway lanes and improvements through all or a portion of the 33-mile segment of I-10 from the Los Angeles/San Bernardino County line to Ford Street in San Bernardino County. Cedar Avenue is within the proposed improvement area. Additionally, SANBAG plans to reconstruct the I-10/Cedar Avenue interchange. The interchange improvements would preceed freeway lane improvements on the I-10. These improvements include widening Cedar Avenue bridge, and improvements at the westbound and eastbound ramp interchanges. The planned improvements are identified later in this Initial Study section under Mitigation Program. The I-10/Cedar Avenue interchange improvement is currently in the final design phase and is planned to be open to traffic in 2019. The proposed improvement design has been coordinated with the I-10 Corridor Project (source: I-10 Corridor Project, Project Report, March 2016).

Funding Sources

In addition to any project-specific mitigation requirements that may be imposed on a project, there are Development Impact Fees (DIF) programs that apply within the proposed project traffic study area.

The Regional Transportation Development Mitigation Plan of the County of San Bernardino (Plan) was developed to satisfy the provisions of the San Bernardino County Congestion Management Plan (CMP). Each jurisdiction, including the County, was required to adopt a regional transportation development mitigation program prior to November 2006. The SANBAG Development Mitigation Nexus Study (SANBAG Nexus Study) determined the fair-share contributions from new development for each local jurisdiction. The total development fair-share of costs is distributed among the Plan's subareas. The Plan identifies only the development fair-share contribution of projects costs as required by the CMP and is not intended to provide 100 percent funding for or the construction of all projects in the Plan. Additional regional Measure I and federal/state funds administered by SANBAG are required to fully fund the projects.

The project site is located in the Rialto Sphere of Influence Subarea. As noted, the SANBAG Nexus Study lists projects which are funded by several development impact fee (DIF) programs. The SANBAG Nexus Study includes the I-10/Cedar Avenue Interchange project and identifies several of the project intersections. As such, the payment of fair-share development impact fees (DIF) mitigates a project's contribution to significant impacts to intersections included in the SANBAG Nexus Study.

Existing Conditions

Intersection capacity analysis were conducted for the traffic study area intersections to determine the existing intersection level of service based on existing intersection geometrics and the AM and PM peak hour traffic volumes. Table 10 identifies existing traffic conditions in the traffic study area.

- a. Delay – In seconds
- b. LOS – HCM Level of Service
- c. Unsignalized Intersection

Five of the traffic study area intersections are currently operating at a deficient level of service (LOS E or LOS F).

- #1, Cedar Avenue at Valley Boulevard. AM peak hour: LOS E; PM peak hour: LOS F
- #3, Cedar Avenue at I-10 eastbound ramps. AM and PM peak hours: LOS F
- #4, Cedar Avenue at Cedar Place. PM peak hour: LOS F
- #5, Cedar Avenue at Orange Street. PM peak hour: LOS F
- #6, Cedar Avenue at Slover Avenue. AM and PM peak hours: LOS F

/L-a/b)

Less Than Significant Impact with Mitigation Incorporated.

**Year 2016 Ambient Condition**

The Opening Year 2016 (without and with the project) scenarios assumes a 1.1 percent annual growth rate. As identified in **Table 11**, the same five traffic study intersections would continue to operate at deficient levels of service (LOS E or LOS F) without the proposed project. The level of service would further decline at the intersection of Cedar Avenue at Cedar Place (AM peak hour: LOS E).

The study intersections are anticipated to continue to operate at deficient levels of service until the I-10/Cedar Avenue Interchange improvements are completed. The County’s Current Traffic Study Guidelines states that in the event that an analysis indicated unsatisfactory levels of service on study area streets, a description of proposed improvements that return intersections to LOS C are to be described, except at locations where the County has already identified a project improvement.

Year 2016 Ambient Plus Project Condition

Daily and peak hour trips were estimated for the proposed project. The trip generation factors for High-Cube Warehouse/Distribution Center were obtained from the 9th Edition of the Institute of Transportation Engineers (ITE) trip generation report. The anticipated truck mix is 80 percent passenger vehicles and 20 percent trucks as outlined in the Fontana Truck Trip Generation Study. The Passenger Car Equivalent (PCE) trips are calculated with a PCE factor of 3.0. The project trip generation estimates are shown in Table 12. The project is estimated to generate 874 PCE trips on a daily basis, with 57 PCE trips in the AM peak hour and 62 PCE trips in the PM peak hour.

Notes:
- Bold and shaded values indicate intersections operating at LOS E or F
- Significance is identified based on Current Guidelines and Interim Guidelines significance criteria (x/x)
  a. Delay – in seconds
  b. LOS – HCM Level of Service
  c. Unsignalized Intersection
  d. TWLTL – two-way left-turn lane

As identified in Table 13, the same five traffic study intersections are forecasted to continue to operate at LOS E or LOS F with and without the proposed project. The addition of project traffic results in the intersections incurring additional delay at these intersections which is considered a significant impact. Mitigation measures are identified in this Initial Study to mitigate the project’s contribution to cumulative impacts to a less than significant level, with the exception of the intersection of Cedar Avenue at Slover Avenue. The Current Traffic Study Guideline identifies that in the event that an analysis indicates unsatisfactory Levels of Service on study area streets, a description of proposed improvements that return intersections to LOS C shall be included, except at locations where the County has already identified a project. The County has identified the Slover Avenue – Phase 2 project to provide improvements on Slover Avenue to Cedar Avenue.

- #1, Cedar Avenue at Valley Boulevard. AM peak hour: LOS E; PM peak hour: LOS F
- #3, Cedar Avenue at I-10 eastbound ramps. AM and PM peak hours: LOS F
- #4, Cedar Avenue at Cedar Place. PM peak hour: LOS F
- #5, Cedar Avenue at Orange Street. PM peak hour: LOS F
#6, Cedar Avenue at Slover Avenue. AM and PM peak hours: LOS F

**Year 2016 Cumulative Condition**

The Year 2016 Cumulative Condition scenario includes other area project trips identified by San Bernardino County Planning, and the cities of Fontana and Rialto, as well as project traffic, and ambient growth to opening year 2016. Other area projects are defined as approved projects that have been recently constructed or are planned to be constructed by opening year. Cumulative traffic volumes were added to the Year 2016 Ambient Plus Project traffic volumes to develop the Year 2016 Cumulative scenario. The capacity of the intersections under this scenario are identified in **Table 14**.

Notes:
- Bold and shaded values indicate intersections operating at LOS E or F
- a. Delay – in seconds
- b. LOS – HCM Level of Service
- c. Un-signalized Intersection
- d. TWLTL – two-way left-turn lane

Table 15 identifies seven traffic study area intersections that are forecast to operate at a deficient level of service (LOS E or LOS F). Of the identified study intersections, six intersections are anticipated to operate at LOS E or LOS F until the I-10/Cedar Avenue Interchange Improvement project is completed. Because there is an identified improvement project, consistent with the County’s Current Traffic Study Guideline, no further mitigation would be required. Additional regional improvements identified in Table 15 include signalizing the intersection of Linden Avenue at Slover Avenue. Measures are proposed that would mitigate impacts to a less than significant level.

**Year 2035 Ambient Condition**

The Year 2035 Ambient Condition addresses impacts due to ambient growth up to the buildout year 2035 within the traffic study area without the proposed project. This scenario also assumes improvements to address regional growth. Regional improvements include the I-10/Cedar Avenue Interchange improvements and the previously identified Year 2016 regional
improvements. As provided in Table 16, the traffic study area intersections are anticipated to operate at LOS E or better with the I-10/Cedar Avenue Interchange improvements.

Year 2035 Ambient Plus Project Condition

To determine potential project impacts, project trips were added to year 2035 ambient traffic volumes. As identified in Table 17, traffic study area intersections are forecasted to operate at LOS E or better with the I-10/Cedar Avenue Interchange improvements. The project impacts are identified based on the San Bernardino County Road Planning and Design Standards (Current Traffic Study Guideline) and the County of San Bernardino Interim Traffic Impact Study Guidelines (Interim Traffic Impact Study Guideline). Therefore, no project impacts would occur under this traffic scenario and no mitigation is required.

Notes:
- Bold and shaded values indicate intersections operating at LOS F
- a. Delay – In seconds
- b. LOS – HCM Level of Service
- c. Un-signalized Intersection

(VI-c) **No Impact.** San Bernardino International Airport is the nearest airport facility to the project site, approximately 11 miles to the east. Given the distance from the airport, construction and operation of the project would not increase the frequency of air traffic or alter air traffic patterns. Therefore, no impacts would occur.

(XVI-d) **Less Than Significant Impact.** The proposed project includes two driveways on Cedar Place, one driveway on Orange Street, and two driveways on Linden Avenue. All access points to the proposed project would be at unsignalized intersections. All driveway and road improvements would be implemented consistent with County design standards. The proposed project would not substantially increase hazards due to a design feature or incompatible use because the project site is adjacent to an established road that is accessed at points with good site distance and properly controlled intersections.

(VI-e) **Less Than Significant Impact.** Ingress/egress and access through the project site would provide for emergency access in compliance with County requirements. No significant impacts are anticipated.

(VI-f) **Less Than Significant Impact.**

**Transit**

Omnitrans provides transit services to western San Bernardino County, including the community of Bloomington. Bloomington is served by two bus routes: Route 19 and Route 29. The proposed project would not modify roads used by either of the bus routes. The project could potentially result in an increased use of the public transportation system. However, this increase would not be substantial and could be accommodated by the existing Omnitrans system. Therefore, the project is not anticipated to impact the effectiveness or performance of existing transit systems. Impacts would be less than significant.

**Pedestrian and Bicycle Facilities**

Sidewalks are currently provided on Orange Street, Cedar Avenue, and Linden Avenue. Bikeways are not provided on adjacent streets to the project site. The project would not significantly impact the effectiveness or performance of existing pedestrian or bicycle facilities.

**Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as conditions of project approval to reduce these impacts to a level below significant. Additionally, the project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.**
Mitigation Measures

Project Mitigation

XVI-1 The Applicant shall be responsible for the construction of driveway approaches along Orange Street, Linden Avenue, and Cedar Place.

XVI-2 Orange Street: Prior to the issuance of an occupancy permit from the County of San Bernardino, Orange Street, west of Cedar Avenue to Linden Avenue shall be restriped to provide a two-way left-turn lane, a distance of approximately 220 feet west of Cedar Avenue. The Applicant shall be responsible for costs associated with this improvement.

XVI-3 Cedar Avenue at Valley Boulevard: The Applicant shall be responsible for the following improvements pending the final design for the I-10/Cedar Avenue Interchange Improvements Project. Convert the eastbound right to an eastbound shared thru-right lane. Adjust the AM peak period signal timing so that the eastbound left, westbound left, and southbound left are lagging phases. The eastbound right lane shall be restriped to an eastbound shared thru-right turn lane. The eastbound approach shall provide two left-turn lanes, a thru lane, a shared thru-left-turn lane, and a right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right. The northbound direction approach shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The southbound approach shall provide two left-turn lanes, two thru lanes, and a shared thru-right.

XVI-4 Cedar Avenue (north-south) at Cedar Place (east-west): Prior to the issuance of an occupancy permit from the County of San Bernardino, the following improvements shall be completed and the cost associated with these improvements shall be the responsibility of the Applicant. Restrict Cedar Place to right-in and right-out movements at Cedar Avenue. Cedar Place in the eastbound direction shall provide a single right-turn lane. The Cedar Avenue northbound shared left-thru lane shall be converted to a thru lane. The northbound direction shall provide two thru lanes; the southbound direction shall provide a thru and a shared thru-right lane.

XVI-5 Cedar Avenue at Orange Street: The Applicant shall be responsible for the following improvements. Orange Street shall be striped to accommodate additional lanes and signal timing modifications. The shared thru-right eastbound lane shall be converted to a shared left-thru-right turn lane. The eastbound approach shall provide a left-turn lane and a shared left-thru-right lane. The westbound direction shall be restriped to include a dedicated westbound left-turn pocket. The westbound approach shall provide a left-turn lane and a shared thru-right turn lane. The northbound direction approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a right-turn lane. Signal timing modifications shall include east-west split phasing to accommodate the eastbound left lane and shared westbound left-thru-right lane.

XVI-6 Project Driveway on Orange Street: The Applicant shall be responsible for the following improvements. Provide a full access driveway 250 feet west of Cedar Avenue. The eastbound
direction shall provide a shared left-thru lane. The westbound direction shall provide a shared thru-right lane. The southbound direction shall provide a shared left-right-turn lane.

Regional Improvements: 2016 Mitigation Requirements

XVI-7

Linden Avenue at Slover Avenue: The intersection shall be signalized. The improvements are to be installed as other area projects develop as determined by the County. The Applicant shall pay a fair share contribution for the intersection improvements.

Regional Improvements: 2035 Mitigation Requirements

The County established a Development Impact Fee (DIF) to raise additional revenues, enabling the construction of necessary circulation system improvements. It also establishes a fair and equitable method of distributing costs of circulation system improvements to accommodate the traffic volumes generated by development.

Caltrans District 8 in cooperation with SANBAG is proposing to improvement I-10 by constructing freeway lanes and improvements through all or a portion of the 33-mile segment of I-10 from the Los Angeles/San Bernardino County line to Ford Street in San Bernardino County. Cedar Avenue is within the proposed improvement area. Additionally, SANBAG plans to reconstruct the I-10/Cedar Avenue interchange. The interchange improvements would precede freeway lane improvements on the I-10. These improvements include widening Cedar Avenue bridge, and improvements at the westbound and eastbound ramp intersections. The I-10/Cedar Avenue interchange improvement is currently in the final design phase and is planned to be opened to traffic in 2019. The proposed improvement design has been coordinated with the I-10 Corridor Project.

XVI-8

Cedar Avenue at Valley Boulevard: Intersection improvements include widening along Cedar Avenue to accommodate additional travel lanes. An eastbound right-turn lane shall be converted to a thru lane. The eastbound direction shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The westbound direction shall provide two left-turn lanes, a thru lane, and a shared thru-right-turn lane. The northbound direction shall be widened to accommodate a thru and right lane. The northbound approach shall provide two left-turn lanes, three thru lanes, and two right-turn lanes. The southbound direction shall be widened to accommodate an additional thru lane; the shared thru-right-turn lane is to be converted to a right-turn only lane. The southbound approach shall provide a left-turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

XVI-9

Cedar Avenue at I-10 Westbound Ramps: Intersection improvements include widening at all approaches to accommodate additional lanes. The westbound direction shall be widened to accommodate a left and a right-turn lane. The westbound approach shall provide a left-turn lane, a shared left-thru lane, and two right-turn lanes. The northbound direction shall be widened to accommodate a left and thru lane. The northbound approach shall provide two left-turn lanes and three thru lanes. The southbound direction shall be widened to accommodate two thru and a right-turn lane. The southbound approach shall provide five thru lanes and two right-turn lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-
10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project's contribution to significant impacts.

XVI-10 Cedar Avenue at I-10 Eastbound Ramps: Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left-turn and a right-turn lane. The eastbound approach shall provide two left-turn lanes, a shared thru-right lane, and a right-turn lane. The northbound direction shall be widened to accommodate two thru and a right-turn lane. The northbound approach shall provide four thru lanes and two right-turn lanes. The southbound approach shall be widened to accommodate a left and thru lane. The southbound approach shall provide two left-turn lanes and three thru lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project's contribution to significant impacts.

XVI-11 Cedar Avenue at Cedar Place: Intersection improvements include widening along Cedar Avenue to accommodate additional lanes and a striped median restricting left-turn in and left-turn out of Cedar Place. The eastbound direction shall provide a shared right-turn lane. The northbound direction shall be widened to accommodate an additional thru lane. The northbound approach shall provide a three thru lanes. The southbound direction shall be widened to accommodate an additional thru lane. The southbound approach shall provide two thru lanes and a shared thru-right turn lane. These improvement shall be implemented as a part of the I-10/Cedar Avenue Interchange Project.

XVI-12 Cedar Avenue at Orange Street: Intersection improvements include widening along Cedar Avenue to accommodate additional lanes The eastbound direction shall provide a left-turn lane and a shared thru-right-turn lane. The westbound direction shall provide a shared left-thru-right-turn lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The southbound right-turn lane shall be converted to a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

XVI-13 Cedar Avenue at Slover Avenue: Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left and thru lane. The eastbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The westbound direction shall be widened to accommodate a left-turn lane; the right-turn lane shall be converted to a shared thru-right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right lane. The southbound approach shall be widened to accommodate a right-turn lane. The southbound approach shall provide a left turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

XVI-14 Linden Avenue and Slover Avenue: The following improvements shall be constructed as Slover Phase 2 is implemented by the County of San Bernardino. The County is currently in the design phase for Slover Phase 2 Improvements. The Slover Phase 2 improvements include widening along the east and westbound approaches. The eastbound approach shall be
widened to accommodate an additional thru lane. The eastbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The westbound approach shall be widened to accommodate a left-turn lane and a thru lane. The westbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The northbound and southbound approaches shall continue to provide a shared left-thru-right lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

<tr>
<td>b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?</td>
</tr>
<tr>
<td>c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?</td>
</tr>
<tr>
<td>d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?</td>
</tr>
<tr>
<td>e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?</td>
</tr>
<tr>
<td>f) Be served by a landfill(s) with sufficient permitted capacity to accommodate the project's solid waste disposal needs?</td>
</tr>
<tr>
<td>g) Comply with federal, state, and local statutes and regulations related to solid waste?</td>
</tr>
</tbody>
</table>

**SUBSTANTIATION:**

XVII-a) **Less Than Significant Impact.** The proposed project does not exceed wastewater treatment requirements of the Regional Water Quality Control Board, Santa Ana Region, as determined by County Public Health – Environmental Health Services. The proposed project is estimated to discharge approximately 0.028 million gallons per day (mgd) (based on 1,500 gpd per acre; City of Rialto Sewer Master Plan). Wastewater would be handled by either an on-site septic system or through a connection to the City of Rialto wastewater collection system. If an on-site septic system is implemented, it would be required to comply with the State Water Quality Control Board (SWQCB) policies for Onsite Wastewater Treatment Systems (septic systems). Therefore, impacts would be less than significant.

XVII-b) **Less Than Significant Impact.** The proposed project would not require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities as
there is sufficient capacity in the existing system for the proposed use. The proposed project would connect to existing water mains in Orange Street, east of Cedar Avenue.

It is not anticipated that the addition of 371,442 sf of high-cube warehouse would adversely impact pipelines or water supply demand within the West Valley Water District (WWWD) because the WWWD anticipates that there is sufficient capacity in the existing water system to serve the anticipated growth within the WWWD, which includes the proposed project.

The proposed project would be served by either an on-site septic system or a connection to the City of Rialto wastewater collection system. The project would be designed to accommodate the connection of the property to the City of Rialto wastewater collection system. A connection to the City of Rialto system would also require approval of an Out of Agency Service Contract from San Bernardino County LAFCO.

Should the project connect to the City of Rialto's system, a sewer line connection would be constructed in Orange Street from the project driveway proximate to Cedar Avenue, and would extend east to the existing manhole in the intersection of Orange Street at Larch Avenue. Based on the sewer capacity analysis conducted as a part of the project, the City of Rialto Sewer Master Plan permits discharge of wastewater until a sewer line reaches 80 percent of capacity for gravity sewer pipes. The City also requires that the velocity in the line be greater than 2 feet per second but less than 12 feet per second. There is an existing 8-inch sewer line in Larch Avenue and a 15-inch main line in Slover Avenue; the Larch Avenue line connects to the Slover Avenue line. Wastewater generated from the proposed project is expected to be approximately 0.028 mgd. The discharge would be approximately eight percent of the capacity in Larch Avenue and four percent of the capacity in the Slover Avenue line. The Larch Avenue line has an allowable flow of 0.465 (at 80%); the project would increase the flow in the Larch Avenue sewer to 0.037 mgd which is far below the maximum allowable flow. The Slover Avenue line has a maximum allowable flow of 1.521 mgd; the project would increase the flow to 0.061 mgd which is far below the maximum allowable flow. This limited sewer discharge would not significantly impact the future capacity of the collection system or the City's wastewater treatment plant. Therefore, the flows associated with the proposed project would not adversely impact the existing sewer system.

XVII-c) Less Than Significant Impact. The proposed project would not require or result in the construction of new storm water drainage facilities or expansion of existing facilities that cause significant environmental effects. The proposed project would use a drainage collection system that would collect the storm water runoff in two detention/infiltration basins, one located in the northeastern portion of the site, the other located in the southeastern portion of the site. The drainage/infiltration basins have been designed and sized to accept storm water flows generated by improvements on the project site. Additionally, a flow-through planter is used to treat storm water before it enters the storm drain system providing a reduction in peak runoff. By collecting the incremental increase in storm water runoff caused by the increase in impervious surface, the project would minimize the amount of off-site flows and allow downstream facilities to accept the remaining discharge.

Flows into the basins would be retained and storm water would percolate into the groundwater basin. Therefore, the drainage design of the project would ensure than on-site and off-site impacts are reduced. All necessary drainage improvements on-site and off-site are required as conditions of construction of the project. Therefore, impacts would be less than significant.

XVII-d) Less Than Significant Impact. The proposed project would have sufficient water supplies available to serve the project from existing entitlements and resources. West Valley Water
District has identified that it has adequate water service capacity to serve the projected demand for the project, in addition to the Water District's existing commitments. The Water District has issued a will serve letter for the provision of potable water.

XVII-e) **Less Than Significant Impact.** As previously addressed, the proposed project would use either an on-site septic system or connect to the City of Rialto sewer system.

XVII-f) **Less Than Significant Impact.** The proposed project is served by the Mid-Valley Landfill which has sufficient permitted capacity to accommodate the project’s solid waste disposal needs.

XVII-g) **Less Than Significant Impact.** The proposed project is required to comply with federal, State, and local statutes and regulations related to solid waste. The project would consist of short-term construction activities (with short-term waste generation limited to minor quantities of construction debris) and therefore would not result in long-term solid waste generation. Solid waste produced during the construction phase of this project or during future operational activity would be disposed of in accordance with all applicable statues and regulations. Accordingly, no significant impacts related to landfill capacity are anticipated from the proposed project.

No significant adverse impacts are identified or anticipated and no mitigation measures are required. The project would be conditioned to comply with all applicable County of San Bernardino regulations and conditions of approval.
**XVIII. MANDATORY FINDINGS OF SIGNIFICANCE:**

| a) | Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☒ | ☐ |

| b) | Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? | ☐ | ☐ | ☒ | ☐ |

| c) | Does the project have environmental effects, which will cause Substantial adverse effects on human beings, either directly Or indirectly? | ☐ | ☐ | ☒ | ☐ |

**SUBSTANTIATION:**

**XVIII-a) Less Than Significant Impact.** The project does not have the potential to significantly degrade the overall quality of the region’s environment, or substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population or drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. There are no rare or endangered species or other species of plants or animals or habitat identified by the Biological Resources Assessment (RBFA 2014) as being significantly and negatively impacted by this project. There are no known historic or prehistoric resources on this site. If any archaeological or paleontological resources are identified during construction the project, the project is conditioned to stop and identify appropriate authorities, who properly record and/or remove for classification any such finds.

**XVIII-b) Less Than Significant Impact.** The project does not have impacts that are individually limited, but cumulatively considerable. The sites of projects in the area to which this project would add cumulative impacts have either existing or planned infrastructure that is sufficient for all planned uses. These sites either are occupied or are capable of absorbing such uses without generating any cumulatively significant impacts.

**XVIII-c) Less Than Significant Impact.** The project would not have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly, as there are no
such impacts identified by the studies conducted for this project or identified by review of other sources or by other agencies. Only minor increases in traffic, emissions and noise would be created by implementation of the proposed project. These potential impacts have been evaluated and have been deemed to be neither individually significant nor cumulatively considerable in terms of any adverse impact upon the region, the local community or its inhabitants. At a minimum, the project would be required to meet the conditions of approval for the project to be implemented. It is anticipated that all such conditions of approval would further insure that no potential for adverse impacts would be introduced by construction activities, initial or future land uses authorized by the project approval.
XIX. MITIGATION MEASURES

(Any mitigation measures, which are not self-monitoring shall have a Mitigation Monitoring and Reporting Program prepared and adopted at time of project approval)

SELF MONITORING MITIGATION MEASURES: (Condition compliance will be verified by existing procedure)

Conditions of Approval

AQ – Operational Standards. The developer shall implement the following air quality measures, during operation of the approved land use: All on-site equipment and vehicles (off-road/ on-road), shall comply with the following:

a) County Diesel Exhaust Control Measures [SBCC § 83.01.040 (c)]

b) Signs shall be posted requiring all vehicle drivers and equipment operators to turn off engines when not in use.

c) All engines shall not idle more than five minutes in any one-hour period on the project site. This includes all equipment and vehicles.

d) On-site electrical power connections shall be provided.

e) All transportation refrigeration units (TRU’s) shall be provided electric connections, when parked on-site.

f) The loading docks shall be posted with signs providing the telephone numbers of the building facilities manager and the California Air Resources Board to report violations.

AQ – Dust Control Plan. The developer shall prepare, submit for review and obtain approval from County Planning of both a Dust Control Plan (DCP) consistent with SCAQMD guidelines and a signed letter agreeing to include in any construction contracts/subcontracts a requirement that project contractors adhere to the requirements of the DCP. The DCP shall include the following requirements:

a) Exposed soil shall be kept continually moist to reduce fugitive dust during all grading and construction activities, through application of water sprayed a minimum of two times each day.

b) During high wind conditions (i.e., wind speeds exceeding 25 mph), areas with disturbed soil shall be watered hourly and activities on unpaved surfaces shall cease until wind speeds no longer exceed 25 mph.

c) Storage piles that are to be left in place for more than three working days shall be sprayed with a non-toxic soil binder, covered with plastic or revegetated.

d) Storm water control systems shall be installed to prevent off-site mud deposition.

e) All trucks hauling dirt away from the site shall be covered.

f) Construction vehicle tires shall be washed, prior to leaving the project site.

g) Rumble plates shall be installed at construction exits from dirt driveways.
h) Paved access driveways and streets shall be washed and swept daily when there are visible signs of dirt track-out.

i) Street sweeping shall be conducted daily when visible soil accumulations occur along site access roadways to remove dirt dropped or tracked-out by construction vehicles. Site access driveways and adjacent streets shall be washed daily, if there are visible signs of any dirt track-out at the conclusion of any workday and after street sweeping.

AQ – Construction Standards. The developer shall submit for review and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:

a) Provide documentation prior to beginning construction demonstrating that the project will comply with all SCAQMD regulations including 402, 403, 431.1, 431.2, 1113 and 1403.

b) Each contractor shall certify to the developer prior to construction-use that all equipment engines are properly maintained and have been tuned-up within last 6 months.

c) Each contractor shall minimize the use of diesel-powered vehicles and equipment through the use of electric, gasoline or CNG-powered equipment. All diesel engines shall have aqueous diesel filters and diesel particulate filters.

d) All gasoline-powered equipment shall have catalytic converters.

e) Provide onsite electrical power to encourage use of electric tools.

f) Minimize concurrent use of equipment through equipment phasing.

g) Provide traffic control during construction to reduce wait times.

h) Provide on-site food service for construction workers to reduce offsite trips.

i) Implement the County approved Dust Control Plan (DCP)

j) Suspend use of all construction equipment operations during second stage smog alerts.  
   NOTE: For daily forecast, call (800) 367-4710 (San Bernardino and Riverside Counties).

AQ – Coating Restriction Plan. The developer shall submit for review and obtain approval from County Planning of a Coating Restriction Plan (CRP), consistent with SCAQMD guidelines and a signed letter agreeing to include in any construction contracts/subcontracts a condition that the contractors adhere to the requirements of the CRP. The CRP measures shall be following implemented to the satisfaction of County Building and Safety:

a) Architectural coatings with Reactive Organic Compounds (ROC) shall not have content greater than 100 g/l.

b) Architectural coating volume shall not exceed the significance threshold for ROG, which is 75 lbs./day and the combined daily ROC volume of architectural coatings and asphalt paving shall not exceed the significance threshold for ROC of 75 lbs. per day.

c) High-Volume, Low Pressure (HVLP) spray guns shall be used to apply coatings.

d) Precoated/natural colored building materials, water-based or low volatile organic compound (VOC) coatings shall be used, if practical.
e) Comply with SCAQMD Rule 1113 on the use or architectural coatings.

Mitigation Measures

IV-1 Burrowing Owl Pre-Construction Survey: A pre-construction survey for Burrowing Owl (BUOW) shall be required 30 days before the start of grading activities to confirm the absence of BUOW from the site. If the survey determine the BUOW to be present, protective measures shall be required to ensure compliance with the Migratory Bird Treaty Act (MBTA) and other applicable California Department of Fish and Game (CDFG) Code requirements and include, but are not limited to the following:

a. Occupied BUOW shall not be disturbed during nesting season (February 1-August 31) unless a qualified biologist verifies through non-invasive methods that either (1) the birds have not begun egg laying or incubation or (2) that juveniles from the occupied burrows are foraging independently and are capable of an independent survival flight.

b. All relocation shall be approved by the California Department of Fish and Wildlife (CDFW). The permitted biologist shall monitor relocated owls a minimum of three days per week of a minimum of three weeks. A report summarizing the results of the relocation and monitoring shall be submitted to the CDFW within 30 days following completion of the relocation and monitoring of the BUOW.

c. A BUOW Mitigation Monitoring Plan prepared by a qualified biologist shall be submitted to the CDFW for review and approval prior to relocation of owls. The BUOW Mitigation Monitoring Plan shall describe proposed relocation and monitoring plans. The plan shall include the number and location(s) of occupied BUOW sites and details on adjacent or nearby suitable habitat available to owls for relocation. If no suitable habitat is available nearby for relocation, details regarding the creation of artificial burrows (numbers, locations, and type of burrows) shall be included in the plan. The plan shall also describe specific procedures to compensate for impacts to BUOW/occupied burrows. Such procedures may include, but are not limited to, the purchase/conservation of off-site suitable habitat that is known to support BUOW at a minimum 1:1 ratio depending on the quality of habitat removed compared to the quality of habitat provided. Specific ratios would be determined in consultation with CDFW. Prior to the issuance of occupancy permits, the Applicant shall provide copies of applicable species mitigation agreements/permits to the County of San Bernardino.

d. If BUOW must be moved away from the disturbance area, passive relocation techniques shall be used. One or more weeks would be necessary to accomplish this relocation and allow the owls to acclimate to alternative burrows. Owls must be relocated by a qualified biologist from any occupied burrows that would be impacted by project activities. Suitable habitat is undeveloped land that can meet the BUOW's life cycle requirements (for both foraging and breeding) and is not intended for development. Suitable habitat must be adjacent or near the disturbance site or artificial burrows would need to be provided nearby. Once the biologist has confirmed that the BUOWs have left the burrow, burrows should be excavated using hand tools and refilled to prevent reoccupation. [Mitigation Measure IV-1] Prior to Grading Permits/Planning

IV-2 Nesting Bird Survey: Pursuant to the Migratory Bird Treaty Act and the Fish and Game Code, removal of any trees, shrubs, or any other potential nesting habitat should be conducted outside
the avian nesting season. The nesting season generally extends from early February through August but can vary based upon seasonal weather conditions. If ground disturbance and vegetation removal cannot occur outside of the nesting season, a qualified biologist, approved by the County of San Bernardino, shall conduct a pre-construction clearance survey for nesting birds. The survey shall be conducted within three days of the start of any ground disturbing activities to ensure that no nesting birds would be disturbed during construction.

The survey shall focus on all bird species. The biologist conducting the clearance survey shall document a negative survey with a brief letter report indicating that no impacts to active bird nests would occur. If no nests are found, no further mitigation would be necessary. If a nest is found, it shall be avoided/protected with a suitable buffer area until nesting activity has ended (e.g., the young fledge). The diameter of the buffer area shall be determined by the biologist based on the species (some birds are more tolerant than others), the location of the nest relative to existing off-site and on-site disturbances and conditions, and discussions with a regulatory biologist at the California Department of Fish and Wildlife. Once the young have fledged and left the nest, or the nest otherwise becomes inactive under natural conditions, normal construction activities can occur. [Mitigation Measure IV-2] Prior to Grading Permits/Planning

V-1 Cultural Resources Monitoring: Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the County of San Bernardino that the Applicant has retained a qualified archaeologist and Native American monitor to observe grading activities and to salvage and catalogue historic and archaeological resources, as necessary. The selection of a qualified Gabriélino Band of Mission Indians Native American monitor shall be made by the archaeologist subject to the approval of the County. The archaeologist and Native American monitor shall be present at the pre-grade conference; the archaeologist shall establish procedures for archaeological resource surveillance; and shall establish, in cooperation with the Applicant/Contractor, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts, as appropriate. Because of the disturbed condition of the project site, the duration of monitoring by both the archaeologist and the Native American monitor shall be determined by the archaeologist. If the archaeologist, with the assistance of the Native American monitor, determines that they are unique historic or archaeological resources as defined by Public Resources Code (PRC) Section 21083.2 or a tribal cultural resource as defined by PRC Section 21074, then the archaeologist and Native American monitor shall conduct additional excavations as determined to be necessary to avoid impacts to these resources by the development. If they are not "unique" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Section 21083.2 of CEQA. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the County of San Bernardino Land Use Services Department. [Mitigation Measure V-1] Prior to Grading Permits/Planning

VI-1 Geotechnical Report: Prior to the issuance of grading permits, the Applicant shall prepare and submit for review and approval by the County Geologist, a design-phase geotechnical report which shall consider the recommendations in the Geotechnical Investigation, and revise as necessary for site preparation and construction. The recommendations of the design-phase geotechnical report shall be implemented during site grading and construction. [Mitigation Measure VI-1] Prior to Grading Permits/Planning
VIII-1  **Soil Investigation:** Prior to the issuance of the first County-issued permit that would allow for site disturbance, a Certified Environmental or Engineering Professional shall conduct an environmental soil investigation at the site as specified in the Phase I Environmental Site Assessment. The Phase II Soil Investigation Report shall be submitted to and approved by San Bernardino County Fire Hazardous Materials Division. Should remediation be required, the clean-up criteria shall be established by the Hazardous Materials Division. [Mitigation Measure VIII-1] Prior to Grading Permits/Planning

XII-1  **Construction Noise:** The “developer” shall submit and obtain approval from County Planning of a signed letter agreeing to include as a condition of all construction contracts/subcontracts requirements to reduce noise impacts during construction, which shall include the following vehicle and equipment emissions and other impacts to air quality by implementing the following measures and submitting documentation of compliance: The developer/construction contractors shall do the following:

a) During the project site excavation and grading, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with the manufactures standards.

b) The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the project site.

c) The construction contractor shall limit all construction-related activities that would result in high noise levels between the hours of 7:00 a.m. and 6:00 p.m., Monday through Saturday excluding holidays.

d) The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise sensitive receptors nearest the project site during all project construction.

e) The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment. To the extent feasible, haul routes shall not pass sensitive land uses or residential dwellings. [Mitigation Measure XII-1] Prior to Grading Permit/Planning

XVI-1  **The Applicant shall be responsible for the construction of driveway approaches along Orange Street, Linden Avenue, and Cedar Place.**

XVI-2  **Orange Street:** Prior to the issuance of an occupancy permit from the County of San Bernardino, Orange Street, west of Cedar Avenue to Linden Avenue shall be restriped to provide a two-way left-turn lane, a distance of approximately 220 feet west of Cedar Avenue. The Applicant shall be responsible for costs associated with this improvement.

XVI-3  **Cedar Avenue at Valley Boulevard:** The Applicant shall be responsible for the following improvements pending the final design for the I-10/Cedar Avenue Interchange Improvements Project. Convert the eastbound right to an eastbound shared thru-right lane. Adjust the AM peak period signal timing so that the eastbound left, westbound left, and southbound left are lagging phases. The eastbound right lane shall be restriped to an eastbound shared thru-right lane. The eastbound approach shall provide two left-turn lanes, a thru lane, a shared thru-left-turn lane, and a right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared
thru-right. The northbound direction approach shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The southbound approach shall provide two left-turn lanes, two thru lanes, and a shared thru-right.

**XVI-4 Cedar Avenue (north-south) at Cedar Place (east-west):** Prior to the issuance of an occupancy permit from the County of San Bernardino, the following improvements shall be completed and the cost associated with these improvements shall be the responsibility of the Applicant. Restrict Cedar Place to right-in and right-out movements at Cedar Avenue. Cedar Place in the eastbound direction shall provide a single right-turn lane. The Cedar Avenue northbound shared left-thru lane shall be converted to a thru lane. The northbound direction shall provide two thru lanes; the southbound direction shall provide a thru and a shared thru-right lane.

**XVI-5 Cedar Avenue at Orange Street:** The Applicant shall be responsible for the following improvements. Orange Street shall be striped to accommodate additional lanes and signal timing modifications. The shared thru-right eastbound lane shall be converted to a shared left-thru-right turn lane. The eastbound approach shall provide a left-turn lane and a shared left-thru-right turn lane. The westbound direction shall be restriped to include a left-turn lane. The westbound approach shall provide a left-turn lane and a shared thru-right turn lane. The northbound direction approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a right-turn lane. Signal timing modifications shall include east-west split phasing to accommodate the eastbound left lane and shared westbound left-thru-right lane.

**XVI-6 Project Driveway on Orange Street:** The Applicant shall be responsible for the following improvements. Provide a full access driveway 250 feet west of Cedar Avenue. The eastbound direction shall provide a shared left-thru lane. The westbound direction shall provide a shared thru-right lane. The southbound direction shall provide a shared left-right-turn lane.

**XVI-7 Linden Avenue at Slover Avenue:** The intersection shall be signalized. The improvements are to be installed as other area projects develop as determined by the County. The Applicant shall pay a fair share contribution for the intersection improvements.

**XVI-8 Cedar Avenue at Valley Boulevard:** Intersection improvements include widening along Cedar Avenue to accommodate additional travel lanes. An eastbound right-turn lane shall be converted to a thru lane. The eastbound direction shall provide two left-turn lanes, two thru lanes, and a right-turn lane. The westbound direction shall provide two left-turn lanes, a thru lane, and a shared thru-right-turn lane. The northbound direction shall be widened to accommodate a thru and right lane. The northbound approach shall provide two left-turn lanes, three thru lanes, and two right-turn lanes. The southbound direction shall be widened to accommodate an additional thru lane; the shared thru right-turn lane is to be converted to a right-turn only lane. The southbound approach shall provide a left-turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

**XVI-9 Cedar Avenue at I-10 Westbound Ramps:** Intersection improvements include widening at all approaches to accommodate additional lanes. The westbound direction shall be widened to accommodate a left and a right-turn lane. The westbound approach shall provide a left-turn lane, a shared left-thru lane, and two right-turn lanes. The northbound direction shall be widened to accommodate a left and thru lane. The northbound approach shall provide two left-turn lanes and three thru lanes. The southbound direction shall be widened to accommodate two thru and
a right-turn lane. The southbound approach shall provide five thru lanes and two right-turn lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project's contribution to significant impacts.

**XVI-10 Cedar Avenue at I-10 Eastbound Ramps:** Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left-turn and a right-turn lane. The eastbound approach shall provide two left-turn lanes, a shared thru-right lane, and a right-turn lane. The northbound direction shall be widened to accommodate two thru and a right-turn lane. The northbound approach shall provide four thru lanes and two right-turn lanes. The southbound approach shall be widened to accommodate a left and thru lane. The southbound approach shall provide two left-turn lanes and three thru lanes. A Nexus Study lists projects which are funded by DIF. The SANBAG Nexus Study for the I-10/Cedar Avenue Interchange Project include the mitigations identified for this intersection. As such the payment of the DIF would mitigate the project's contribution to significant impacts.

**XVI-11 Cedar Avenue at Cedar Place:** Intersection improvements include widening along Cedar Avenue to accommodate additional lanes and a striped median restricting left-turn in and left-turn out of Cedar Place. The eastbound direction shall provide a shared right-turn lane. The northbound direction shall be widened to accommodate an additional thru lane. The northbound approach shall provide a three thru lanes. The southbound direction shall be widened to accommodate an additional thru lane. The southbound approach shall provide two thru lanes and a shared thru-right turn lane. These improvement shall be implemented as a part of the I-10/Cedar Avenue Interchange Project.

**XVI-12 Cedar Avenue at Orange Street:** Intersection improvements include widening along Cedar Avenue to accommodate additional lanes. The eastbound direction shall provide a left-turn lane and a shared thru-right-turn lane. The westbound direction shall provide a shared left-thru-right-turn lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The southbound right-turn lane shall be converted to a shared thru-right lane. The southbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

**XVI-13 Cedar Avenue at Slover Avenue:** Intersection improvements include widening at each approach to accommodate additional lanes. The eastbound direction shall be widened to accommodate a left and thru lane. The eastbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The westbound direction shall be widened to accommodate a left-turn lane; the right-turn lane shall be converted to a shared thru-right-turn lane. The westbound approach shall provide two left-turn lanes, a thru lane, and a shared thru-right lane. The northbound direction shall be widened to accommodate a thru lane. The northbound approach shall provide a left-turn lane, two thru lanes, and a shared thru-right lane. The southbound approach shall be widened to accommodate a right-turn lane. The southbound approach shall provide a left turn lane, three thru lanes, and a right-turn lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

**XVI-14 Linden Avenue and Slover Avenue:** The following improvements shall be constructed as Slover Phase 2 is implemented by the County of San Bernardino. The County is currently in the design phase for Slover Phase 2 Improvements. The Slover Phase 2 Improvements include widening along the east and westbound approaches. The eastbound approach shall be widened
to accommodate an additional thru lane. The eastbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The westbound approach shall be widened to accommodate a left-turn lane and a thru lane. The westbound approach shall provide a left-turn lane, a thru lane, and a shared thru-right lane. The northbound and southbound approaches shall continue to provide a shared left-thru-right lane. The Applicant shall pay a fair-share contribution for the intersection improvements.

PROJECT STUDIES

Southern California Geotechnical, October 30, 2014, Geotechnical Investigation, Proposed Commercial/Industrial Building, Cedar Avenue and Orange Street, San Bernardino County, California. Prepared for Thrifty Oil Co.

Comment Letter from SCAQMD
Mitigated Declaration (MND) for the Proposed
Thrifty Oil Warehouse Facility Project Located in Unincorporated Bloomington

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comments are meant as guidance for the Lead Agency and should be incorporated into the Final MND.

The Lead Agency proposes the construction and operation of a 371,442 square foot (sf) high-cube warehouse (including 10,000 square feet of office space) with unknown occupants on an approximately 18.8-acre site. The MND estimates approximately 624 total vehicle trips, including approximately 125 daily diesel truck trips. In the Air Quality Section, the Lead Agency quantified the project’s construction and operation air quality impacts and compared those impacts with the SCAQMD’s recommended regional and localized daily significance thresholds. The Lead Agency determined that localized and regional daily construction and operation emissions are less than significant. The Lead Agency also conducted a health risk assessment for the proposed warehouse project.

The SCAQMD staff has concerns about the daily truck trip rate and associated fleet mixture percentages assumed in the MND. Details are included in the attachment. After revising the air quality analysis, should the Lead Agency determine that project air quality impacts will exceed the SCAQMD recommended significance thresholds, the identification and evaluation of mitigation measures to reduce impacts below significance levels before the consideration of the MND for adoption are required by the CEQA Guideline Section 15074(b). Additionally, the SCAQMD staff has included a list of mitigation measures in the attachment to assist the Lead Agency in identifying feasible mitigation measures which have the potential to substantially lessen such significant air quality effects as stated in Public Resources Code Section 21002. In an event that the Lead Agency determines that such significant air quality impacts cannot be mitigated or avoided, a draft environmental impact report shall be prepared pursuant to the CEQA Guideline Sections 15073.5, 15086, and 15087.
Please provide the SCAQMD with written responses to all comments contained herein prior to the adoption of the Final MND. The SCAQMD staff is available to work with the Lead Agency to address these issues and any other air quality questions that may arise. Please contact Gordon Mize, Air Quality Specialist – CEQA Section, at (909) 396-3302, if you have any questions regarding these comments.

Sincerely,

Lijin Sun

Air Quality Analysis

Daily Truck Trip Rate

1. SCAQMD staff recommends revising the air quality and related analyses using the Institute of Transportation Engineers (ITE) recommended Truck Trip Generation Rate of 0.64\(^1\) (trip ends per 1,000 square feet) that is associated with the ITE Land Use for High-Cube Warehouse/Distribution Center (152) Total Trip Generation Rate of 1.68\(^2\) so that potential air quality and health risk impacts are not underestimated for the project since the future occupants/operators are unknown.

Specifically, the Air Quality Analysis used the ITE 1.68 overall trip generation rate estimating 624 total vehicle trips (for cars and trucks), but does not use the referenced ITE 0.64 daily truck trip rate, which is 38.1% of total trips (approximately 238 daily truck trips). Rather, the air quality analysis uses a 0.343 daily truck trip rate that estimates approximately 125 daily truck trips (ITE 1.68 total daily trip rate minus 1.337 passenger vehicle trip rate = 0.343 (20.43%) daily truck trip rate and truck vehicle fleet mixture percentages presumably from the City of Fontana Truck Trip Generation Study (Fontana Study) to estimate project air quality operational impacts in the CalEEMod modeling. By using the 0.343 Fontana Study daily truck trip rate, trucks are estimated at 125 daily truck trips in the MND instead of approximately 238 daily truck trips using the ITE 0.64 daily truck trip rate. Consistent with the ITE 1.68 total trip rate, SCAQMD staff recommends revising the air quality and related analyses using the ITE 0.64 truck rate in order to avoid underestimating the number of trucks and associated adverse air quality and health impacts.

Fleet Mixture Percentages

2. SCAQMD staff recommends revising the CalEEMod estimates for operations using the proportion of trucks (2-axle, 3-axle and 4-plus axle trucks) in the appropriate truck subcategories in CalEEMod to reflect the number of trucks estimated using the ITE recommended truck trip rate for the chosen land usage. The transportation/traffic section and air quality analysis indicate that the Fontana Study fleet mixture percentages were used in the air quality and related analysis to determine the number and types of project truck trips. The fleet mixture percentages include: 3.46 percent of the total fleet for 2-axle Trucks; 4.64 percent for 3-axle trucks; and 12.33 percent for 4-axle and larger trucks with truck categories totaling 20.43 percent of the total vehicle fleet. Passenger Vehicles would therefore comprise 79.57 percent of total vehicles during operations. However, the 0.343 daily truck trip rate resulted in fleet percentages for the CalEEMod truck subcategories that were not proportionally adjusted consistent with the percentage of trucks estimated using the ITE 0.64 daily truck trip rate. In order to avoid underestimating project operational and related air quality and health effect impacts, the Air Quality Analysis, HRA and Final MND should be

\(^2\) Ibid, Page 273.
revised using the following truck percentages: LHD<sup>2</sup> = 0.0645, MHD = 0.0865, HHD = 0.2300. SCAQMD staff therefore recommends revising the CalEEMod and other applicable analyses reflecting the vehicle category percentages associated with the ITE 0.64 truck trip rate. Otherwise, the number of project trucks and associated air quality and health impacts could be underestimated.

**Health Risk Assessment (HRA) Analysis**

3. The SCAQMD staff is concerned that the Health Risk Assessment (HRA) has underestimated the cancer risk from the proposed project. In the HRA, the Lead Agency used the AERMOD dispersion model to estimate DPM concentrations from the diesel vehicles generated by the proposed project and used the 2015 revised OEHHA guidelines to estimate the health risks to sensitive receptors in the project vicinity. The SCAQMD staff recommends that the Lead Agency revise the HRA based on the following comments, which are intended to assist the Lead Agency in assessing the potential cancer risk attributable to the proposed project.

a) The Lead Agency used the rural option in the dispersion modeling. SCAQMD modeling methodology requires the use of the urban option. Please provide an explanation of why the rural option is appropriate or revise the HRA using the urban option.

b) On-site idling was modeled as a single volume source. On-site idling sources should span the entire docking area. The SCAQMD staff recommends that the Lead Agency revise the HRA using a line volume source that spans the entire docking area and include 15 minutes of idling to ensure that impacts are properly analyzed.

c) On-site travel emissions are not accounted for in the HRA. By not including on-site travel emissions, the Lead Agency likely underestimated health risks. The SCAQMD staff recommends that the Lead Agency revise the HRA using a series of volume sources to account for the on-site travel emissions.

d) In the file “Thrifty Truck Emissions.xls: Table Annual Emission Factors 25” the Lead Agency used emission rates for model year 2014 and newer. Since the project’s operational year is 2016, emission rates should include 2014 and older trucks. The SCAQMD staff recommends incorporating older trucks into the emissions rate calculation or incorporate mitigation measures limiting trucks to model year 2014 or newer.

e) In the file “Thrifty Truck Emissions.xls: Annual Emission Factors Idle” the Lead Agency used emission rates for model year 2010 and newer. Since the project’s operational year is 2016, emission rates should include 2010 and older trucks. The SCAQMD staff recommends incorporating older trucks into the emissions rate calculation or incorporate mitigation measures limiting trucks to model year 2010 or newer.

f) All truck routes terminate in residential neighborhoods. Truck routes should be modeled from the project site to where the trucks enter the freeway. The SCAQMD staff
recommends that the Lead Agency revise the model using appropriate source placement as well additional grid receptors extending to the freeway.

g) The HRA analysis involved the use of a 50-meter spacing receptor grid over the existing residences and schools. However, as modeled, the receptor grid may miss potential peak concentration locations along the property boundaries. The SCAQMD staff recommends that the Lead Agency revise the model and start the grid at the property boundaries to ensure potential maximum concentrations are identified.

Furthermore, the Lead Agency did not include residential receptors located on the west side of Linden Ave. between Orange St. and Slover Ave. The SCAQMD staff recommends that the Lead Agency revise the model and include additional receptors to ensure potential maximum concentrations are identified and disclosed.

h) The 2015 revised OEHHA guidelines acknowledge that children are more susceptible to the exposure to air toxics and have revised the way cancer risks are estimated to take this into account. Since the emissions from the project generated trucks get cleaner with time due to existing regulations, it would not be appropriate to average out the emissions over the 30-year exposure duration since this would underestimate the health risks to children who would be exposed to higher DPM concentrations during the early years of project operation. Therefore, SCAQMD staff recommends that the DPM emissions for each year of operation be applied to each of the corresponding age bins (i.e. emissions from Year 1 of project operation should be used to estimate cancer risks to the third trimester to 0 year age bin; Year 1 and 2 of project operation should be used to estimate the cancer risks to the 0 to 2 years age bins; and so on).

Operational Mitigation Measures – Mobile Sources

4. Should the Lead Agency determine after further analyses that project impacts will exceed SCAQMD recommended significance thresholds, the following mitigation measures are recommended to assist the Lead Agency in reducing such significant impacts from mobile source operations in addition to the mitigation measures included in the MND starting on page 21 and 75. CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and/or operation to minimize any significant impacts. In the event that the proposed project generates significant adverse air quality impacts, information on potential mitigation measures as guidance to the Lead Agency are available on the SCAQMD CEQA Air Quality Handbook website.3 Examples of potential mitigation measures for the Lead Agency to consider may include the following:

a) Require the use of 2010 compliant diesel trucks, or alternatively fueled, delivery trucks (e.g., food, retail and vendor supply delivery trucks) at commercial/retail sites upon project build-out. If this isn’t feasible, consider other measures such as incentives, phase-in schedules for clean trucks, etc.

b) Have truck routes clearly marked with trailblazer signs, so that trucks will not enter residential areas.

c) Limit the daily number of trucks allowed at the facility to levels analyzed in the Final MND. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the project through CEQA prior to allowing this land use or higher activity level.

d) Provide electric vehicle (EV) Charging Stations (see the discussion below under “f.” regarding EV charging stations).

e) Should the proposed project generate significant regional emissions, the Lead Agency should require mitigation that requires accelerated phase-in for non-diesel powered trucks. For example, natural gas trucks, including Class 8 HHD trucks, are commercially available today. Natural gas trucks can provide a substantial reduction in health risks, and may be more financially feasible today due to reduced fuel costs compared to diesel. In the Final CEQA document, the Lead Agency should require a phase-in schedule for these cleaner operating trucks to reduce project impacts. SCAQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency and project applicant.

f) Trucks that can operate at least partially on electricity have the ability to substantially reduce the significant NOx impacts from this project. Further, trucks that run at least partially on electricity are projected to become available during the life of the project as discussed in the 2012 Regional Transportation Plan. It is important to make this electrical infrastructure available when the project is built so that it is ready when this technology becomes commercially available. The cost of installing electrical charging equipment onsite is significantly cheaper if completed when the project is built compared to retrofitting an existing building. Therefore, the SCAQMD staff recommends the Lead Agency require the proposed warehouse and other plan areas that allow truck parking to be constructed with the appropriate infrastructure to facilitate sufficient electric charging for trucks to plug-in. Similar to the City of Los Angeles requirements for all new projects, the SCAQMD staff recommends that the Lead Agency require at least 5% of all vehicle parking spaces (including for trucks) include EV charging stations. Further, electrical hookups should be provided at the onsite truck stop for truckers to plug in any onboard auxiliary equipment. At a minimum, electrical panels should appropriately sized to allow for future expanded use.

g) Create a buffer zone of at least 300 meters (roughly 1,000 feet), which can be office space, employee parking, greenbelt, etc. between the warehouse/distribution center and sensitive receptors.

h) Design the warehouse/distribution center such that entrances and exits are such that trucks are not traversing past neighbors or other sensitive receptors.

i) Design the warehouse/distribution center such that any check-in point for trucks is well inside the facility property to ensure that there are no trucks queuing outside of the facility.

j) Design the warehouse/distribution center to ensure that truck traffic within the facility is located away from the property line(s) closest to its residential or sensitive receptor neighbors.

---

k) Restrict overnight parking in residential areas.
l) Establish overnight parking within the warehouse/distribution center where trucks can rest overnight.
m) Establish area(s) within the facility for repair needs.
n) Develop, adopt and enforce truck routes both in and out of city, and in and out of facilities.
o) Have truck routes clearly marked with trailblazer signs, so trucks will not enter residential areas.
Responses to Comments
South Coast Air Quality Management District  
Lijin Sun, J.D., Program Supervisor, CEQA IGR  
February 17, 2017

Comment 1 (summarized)
Truck Trip Rates: SCAQMD has concerns regarding the daily truck trip rate and associated fleet mix percentages in the IS/MND.

Response 1
The High-Cube Warehouse/Distribution Center, Bloomington, CA Traffic Impact Study (2016) was prepared by David Evans and Associates, Inc. and approved by the County of San Bernardino, Traffic Division for use in the IS/MND. The Traffic Impact Study was prepared based on methodology, including but not limited to the trip generation rates and fleet mix percentages, approved by the County Traffic Division. The air quality analysis uses the assumptions in the Traffic Impact Study for trip generation.

Comment 2 (summarized)
Fleet Mixture Percentages: SCAQMD has requested that the CalEEMod model estimates for emissions from operations be revised using the proportion of trucks in the appropriate truck subcategories.

Response 2
As stated on Page 20 of the Air Quality Technical Report, the CalEEMod model was only used to calculate area source and energy use emissions. The report states:

“To estimate emissions from on-road vehicles, the EMFAC model was used. One-way trip lengths for employee trips (light-duty autos and trucks) were assumed to be 15 miles. This assumption is conservative because it is higher than the CalEEMod Model default value of 12.7 miles for projects within the SCAQMD. A one-way trip length of 40 miles per one-way trip for truck traffic was used based on similar projects.

Because the CalEEMod model outputs were not used in the report to evaluate air quality impacts, it is not necessary to revise the CalEEMod model outputs as suggested by the SCAQMD. Furthermore, because the CalEEMod model was not used, project operational and related air quality and health effect impacts were not underestimated as suggested in the comment.

Because the analysis was originally prepared prior to the release of the EMFAC2014 model, emission factors from the EMFAC2011 model were used to evaluate impacts. As a part of responding to SCAQMD’s comments, the analysis has subsequently been updated to use EMFAC2014 emission factors to estimate emissions from vehicles. The revised emission estimates do not change the conclusions of the air quality analysis relative to significance of impacts.

Comment 3 (summarized)
Health Risk Assessment: SCAQMD noted that the Health Risk Assessment (HRA) may have underestimated the cancer risk from the proposed project.

a. The urban option in the dispersion model should be used.

b. On-site idling was modeled as a single volume source.
c. On-site travel emissions are not accounted for in the HRA.

d. Annual truck emission rates for model year 2014 or newer trucks were used; emission rates for 2014 or older trucks should be used.

e. Annual truck emission idle rates for model year 2014 or newer trucks were used; emission rates for 2014 or older trucks should be used.

f. All truck routes terminate in residential neighborhoods.

g. The HRA should start the 50-meter spacing grid at the property boundaries, and include residential receptors west of Linden Avenue between Orange Street and Slover Avenue.

h. Requesting changes to the methodology used for the diesel particulate matter (dpm) analysis.

Response 3

a. The air dispersion modeling has been revised to use the urban option in the analysis. A single urban area (Fontana) was used, with a population of 207,460.

b. The SCAQMD has suggested that on-site idling should encompass the entire docking area, and that the HRA be revised using a line volume source to represent 15 minutes of idling on site. This suggestion is not representative of the manner in which trucks would operate on site. Trucks would not be allowed to idle for 15 minutes while in the docking area. Rather, trucks would idle as they enter the facility through the entrance gate and check in. That is the reason that the idling source was represented at the location of the gate rather than throughout the site. In accordance with the State of California Air Resources Board’s (ARB) Commercial Vehicle Idling Regulation, trucks are not allowed to idle on site unless queuing or being inspected. Therefore, it is not reasonable to model the idling of trucks throughout the entire facility.

However, to address the SCAQMD’s comment, the model has been rerun to allocate the idling emissions throughout the entire docking area. The docking area has been represented as a series of volume sources, which is equivalent to the manner in which AERMOD treats line sources. The resulting cancer risk calculations with this allocation of idling emissions lowered the risk calculated for the facility by 0.067 in a million at the point of maximum impact, from 1.096 in a million to 1.029 in a million. Therefore, representation of idling as a single source at the entrance to the facility provides a conservative estimate of potential cancer risk. No impact would occur.

c. On-site travel emissions were added to the analysis using a series of volume sources as recommended by the SCAQMD. It was assumed that trucks would travel 5 miles per hour (mph) on site. See page 25 in revised report dated February 22, 2017.

d. The SCAQMD has misinterpreted the supporting information and calculations provided in the appendix to the report. The emission factors were originally based on the ARB’s EMFAC2011 model which provides factors for operational year. While it is possible to obtain emission factors for model years, the factors used in this analysis were not based on model year 2014 and newer as suggested by the SCAQMD. Rather, the EMFAC2011 emission factors for aggregated model years were obtained from the ARB’s website. These emission factors do include 2014 and older trucks. The emission factors for aggregated model years are based on the average fleet in operation for the year for which emission factors are provided.
Since the analysis was prepared, the ARB has updated its EMFAC model. It should also be noted that the project was not constructed in 2014; therefore, the earliest starting date for project operations would be 2017. Accordingly, the emission factors have been updated to reflect the EMFAC2014 model. Emissions from heavy-duty vehicles representing operational years from 2017 through 2046 were obtained from the ARB’s website for aggregate model years. These emission factors represent the fleet that is operating during that calendar year, and includes older vehicles.

e. As discussed in the response to Comment 3d, the EMFAC idling emission factors were not obtained for truck model years, but for aggregated model years which represent the fleet for the operational year in question. As discussed in the response to Comment 3d, the idling emission factors have been updated to reflect a start date of 2017 and using the EMFAC2014 model. These factors include trucks that are older than 2017.

f. The SCAQMD has suggested that truck routes should be modeled from the project site to where the trucks enter the freeway. Truck emissions were modeled to the entrance of Interstate 210 north of the facility.

It is speculative to determine where each truck route would terminate, and therefore it is not possible to state that “all truck routes terminate in residential neighborhoods”. Because the analysis provided in the Air Quality Technical Report includes the roadways where all project trucks travel to and enter the Bloomington Warehouse facility, plus idling at the facility itself, the analysis includes the locations where the impacts would be greatest. The impacts from a single truck trip terminating in a residential neighborhood outside of the main impact area would be lower than predicted in the Air Quality Technical Report. It is therefore not necessary to evaluate all truck route in the HRA because the HRA provides an analysis of the maximally exposed individual residential receptor.

g. The SCAQMD has suggested that a refined grid be used in the analysis, and indicated that the grid should be started at the property boundary. The SCAQMD has also identified a location where residential receptors are present on the west side of Linden Avenue between Orange Street and Slover Avenue.

The analysis provides an estimate of risk at residential receptors based on a residential exposure scenario. Therefore, a grid was placed on the areas where residences and/or schools are present nearest to the facility. To address the SCAQMD’s comments regarding a refined grid, a 25-meter grid was placed where residential receptors are present. There are no residential receptors located directly at the facility boundary; therefore, it is not appropriate to placed receptors along the property boundaries because no one will be residing at those locations 24 hours per day, 350 days per year, for 30 years.

A grid was placed in the location west of Linden Avenue where residential receptors are present. The revised Health Risk Assessment is included in the Air Quality Analysis dated February 22, 2017; see pages 22 through 35. The findings of the analysis have not changed; the impact is less than significant.

h. The analysis followed the approach used by other projects that generate substantial truck trips, in that it uses an average over the 30-year exposure period to calculate risk. The risk is calculated
based on OEHHA guidance, which provides an estimate of the increased excess cancer risks associated with exposure of an individual over a 30-year period, including exposure during childhood. The SCAQMD is suggesting that the emissions be weighted to address potential exposure in the early period when truck emissions are higher. The analysis already takes into account the increased sensitivity of children to exposure to diesel particulate. The use of averaged emissions over the exposure period is consistent with the approach used to evaluate risks from such entities as the Ports of Long Beach and Los Angeles, which are substantial diesel truck trip generating projects.

Nevertheless, even if the concentrations are weighted toward exposure of children to higher concentrations due to higher emitting vehicles in the early years of project operation, the predicted risks remain below 10 in a million. Impacts remain less than significant.

**Comment 4 (summarized)**

Operational Mitigation Measures – Mobil Sources. Mitigation measures were recommended should impacts be determined to be exceed the SCAQMD’s recommended significance thresholds.

**Response 4**

Based on the updates to the Health Risk Assessment, the predicted risks are lower than the original analysis predicted. Therefore, no operational mitigation measures are warranted or required.
