**CONTACT:** *Tracey Martinez, Public Information Officer*  
*(909) 387-5950, 800-426-8689, pager #3307*

## Candle with Care

Candles are a great way to create a warm glow for your home, and can add an elegant touch to holiday decor. But candles are an open flame in your home, which means that it can easily ignite anything that can burn.

FEMA and the National Fire Protection Association (NFPA) state candle fires in December increase by more than 50 percent compared to other months. Statistics provided by the NFPA reveal that a candle fire in the home is reported to a fire department every 30 minutes. More than half of all home candle fires occur when something that can catch on fire is too close to the candle.

Battery operated candles are a safe alternative to real candles. They look and smell like real candles, and are easy to find in holiday themes. Plus, if you find one you really like you can use it for many years! However, if you decide you want to use real candles in your home, just remember to “Candle with Care.”

- Blow out all candles when you leave the room or go to bed.
- Avoid the use of candles in the bedroom and other areas where people may fall asleep.
- Keep candles at least 12 inches away from anything that can burn.
- Use candle holders that are sturdy, and won't tip over easily.
- Light candles carefully. Keep your hair and any loose clothing away from the flame.
- Don't burn a candle all the way down — put it out before it gets too close to the holder or container.
- Never use a candle if oxygen is used in the home.
- Never use lighted candles on a tree or near other evergreens.
- Have flashlights and battery-powered lighting ready to use during a power outage. Never use candles.
