County issues Heat Advisory, high heat temperatures expected

Temperatures are expected to exceed 100 degrees today and remain very hot through the week, prompting County of San Bernardino Health Officer Dr. Maxwell Ohikhuare to issue a heat advisory.

“While this intense heat is not especially unusual, the extreme heat could cause some people to be caught off guard, especially those most susceptible to heat illness,” Ohikhuare said. “Those most vulnerable are the elderly, those who work or exercise outdoors, infants and children, the homeless or poor, and people with chronic medical conditions.”

High or unusually hot temperatures can affect one’s health. People are advised to take the necessary precautions to prevent serious health effects such as heat exhaustion or heat stroke by following the tips below.

Stay cool

- Stay in air-conditioned buildings.
- Find an air-conditioned Cooling Center open to the public by dialing the United Way’s toll-free resource telephone line at **2-1-1**, or online at <http://211sb.org/cooling-centers>.
- Do not rely on a fan as a primary cooling device.
- Limit outdoor activity, especially midday when it is the hottest part of the day, and avoid direct sunlight.
- Wear loose, lightweight, light-colored clothing.
- Take cool showers or baths to lower body temperature.
- Check on at-risk friends, family and neighbors at least twice a day.

Stay hydrated

- Drink water more than usual and don’t wait until thirst sets in to drink.
- Drink from two to four cups of water every hour while working.
- Avoid alcohol or liquids containing high amounts of sugar.
- Make sure family, friends and neighbors are drinking enough water.

Remember, pets are vulnerable to high temperatures too, but are unable to vocalize their distress. Some signs of heat distress in pets can include heavy panting, difficulty breathing, lethargy, excessive thirst, and vomiting. Help prevent a heat emergency by taking these steps.

For Pets

- Leave pets extra water.
- Bring pets inside during periods of extreme heat.

- Ensure pets have plenty of shade if kept outside. Remember, the shade pets have in the morning will either change or diminish as the sun moves throughout the day and may not protect them.
- Don't force animals to exercise when it is hot and humid. Exercise pets early in the morning or late in the evening.
- Do not let pets stand on sidewalks or hot asphalt to avoid burning their paws.
- Never leave pets in a parked vehicle, even in the shade with windows cracked, temperatures can reach over 120 degrees inside. The vehicle is quickly turned into a furnace and can kill any animal.
